

The IntelliPointer advantage

You can move the pointer comfortably and smoothly to anywhere on the computer screen with a small and slow movement of your hand while maintaining high precision.

For better control and comfort rest your hand on a surface or wrist pad. Keep your hand relaxed.

IntelliPointer is designed to reduce your hand movement and the stress on your hand.

Always move your hand slowly and smoothly.

IntelliPointer automatically provides proper precision and speed for you.

Setting pointer speed

There is no need to adjust pointer speed and acceleration for all plug and play mouse devices.

For third party mouse drivers such as Logitech or Kensington deselect acceleration and set the speed at medium. For more details in changing mouse pointer properties see Windows help.

Disabling and enabling IntelliPointer

To disable IntelliPointer click on its icon on the bottom right of your computer screen and then click Stop.

To enable IntelliPointer again click on its icon and then click Run.

When IntelliPointer is disabled you can use the regular adjustments for speed and acceleration in the control panel of your computer.

Uninstalling IntelliPointer

1. Click the IntelliPointer icon on the bottom right of the screen.
2. Click Exit in the pop up menu.
3. Click OK in the dialog box. This prepares IntelliPointer for uninstalling.
4. Go to My Computer, Control Panel, Add/Remove programs. Then, select IntelliPointer in the list box and click the Add/Remove button.
