

Ambient

All the samples in this folder are made using software called Metasynth on the Mac.

MetaSynth is a unique program in that it creates synthesised sounds by extrapolating digital data from images. Determining the sound from the position and colour of objects within the image.

These sounds are perfect for creating an ambient back drop to your track.

You can find the above samples in the
[/Samples/ambient/\(aif/wav\)](#)
folder on the CD-ROM
