Restore
******
Note: Don't forget to print this section.

To Restore:

Restart computer press F8 when says Starting Windows 95 and select the
command prompt Only from the menu.
TYPE ERS at the command prompt to execute ERS.bat, that will have all the notes you
wrote, dates of backups and reminds you of the restore command words, so you have
to remember word ERS.
You will find another copy of ERS.bat is in the 1ers folder.

type
CD 1ers
then type

Type BackupA to restore from BackupA
Type BackupB to restore from BackupB
Type BackupC to restore from BackupC

Type Day1 to restore from today's backup.
Type Day2 to restore from yesterday's backup.
Type Day3 to restore from day before yesterday's backup.
so on with Day4, Day5, Day6 and Day7 that if you backup daily.

Type vitals1 to restore from vitals1 backup.
type vitals2 to restore from Vitals1 backup.

Type startup1 to restore from startup1 backup.
Type startup2 to restore from startup2 backup.

Note: If the Autoexec.bat, Config.sys and the Dosstart.bat size equal to zero 0 then
MS-DOS will give you file not found when restoring

Note: Don't forget to print this section.

Explanations of many MS-DOS modes in Win95:
****
There could be up to four instances of MS-DOS in Win95.
In case of a clean Windows' 95 install there are only three.
only one works with any   ERS program:

Start your computer and select F8 when says "Starting Win95" from the menu

you must select: "Command Prompt only", that is MSDOS Stand alone,
Win95 is completely out of the picture here.
(this is the one to select to restore system files)

Don't use these   ones:
====================
MSDOS inside windows called MSDOS Prompt. (don't use this one)

MSDOS mode outside Windows, is the one that when you Shut down windows
and select Exit to MS DOS.(Still controlled by Win95)(don't use this one)

When you start your computer and select F8 when says "Starting Win95"
from the menu you can select:
"Previous version of MS-DOS" if you installed Win95 on top DOS6.22
then you will have option in the menu to select.(don't use this one)

Also don't use the" Command Prompt in Safemode", absolutely no, you are in the
windows environment here and MS-DOS doesn't know Safemode.
