

Filtering MIDI FX

The **Event Filter** command lets you remove events from the MIDI data, keeping or passing through only those events that you specify. The Event Filter effect works almost identically to the event filter used by the **Edit-Select by Filter** command. For more information, see [Event Filters](#).

For step by step instructions:

[How to Apply an Event Filter to MIDI Data](#)

To Apply an Event Filter to MIDI Data

1. Select the data to be affected.
2. Choose **MIDI Effects-Event Filter** from the **Edit** menu or from the pop-up menu to open the Event Filter dialog box.
3. Set the event filter parameters.
4. Click OK.

Cakewalk applies the specified event filter to the selected data, removing all those events that do not meet the filter criteria.
