

Converting older Corel MOSAIC and Corel MULTIMEDIA MANAGER files to Corel Media Folder 8.0

The Corel Media Folder 8.0 Conversion wizard (cmmconv.exe) is a utility that makes it easy for you to convert older Corel MOSAIC and Corel MULTIMEDIA MANAGER files into Corel Media Folder folders.

The utility will convert the following:

- Corel MOSAIC 5.0 catalogs - files with the extension .clc
- Corel MOSAIC 5.0 libraries - files with the extension .clb
- Corel MULTIMEDIA MANAGER 6.0 albums - files with the extension .gal
- Corel MULTIMEDIA MANAGER 7.0 albums - files with the extension .cmm

Notes

- Ensure that you have Corel Media Folder 8.0 installed on your system before you begin converting your files. If you don't have it installed, run the CorelDRAW Setup program and choose Custom installation. You'll find Corel Media Folder under Graphics Utilities in the Components dialog box.
- The Conversion Wizard can convert any number of files at once; however, multiple files will be converted to a single Album.
- Corel MOSAIC 5.0 Libraries (.clb files) cannot be converted using Windows NT. To convert them, switch to Windows 95 and run the Conversion Wizard again.
