

# Floating Element Manager Contracts

There is only one contract in this category and it must have the Floating Element Manager as one of its participants. See [FloatingElementManager.doc](#) for further information on this SmartElement.

This contract fixes the position of an element within the browser window regardless of the scroll position or size of the browser window. The effect is that the element floats on top of the document as the document is scrolled. This contract must be made with the Floating Element Manager SmartElement in the element library. This contract / SmartElement pair is good for placing a company logo on the screen so that it is always visible. More than one element can be bound to the floating element manager allowing many elements to float in the browser window.

## Parameters

### Always At Front

Makes the target element z-order very high so that it appears on top of the other elements as they are scrolled underneath the floating element.

### Horizontal Margin

The distance between the right or left edge of the element and the browser window.

### Vertical Margin

The distance between the top or bottom of the element and the browser window.

### Positioning

Drop down list of positions for the element. Depending on the choice for position Vertical Margin, or Horizontal Margin may not apply. For example a position of "Middle left" will place the element in the middle of the page "Horizontal Margin" pixels from the left edge of the browser.
