Miscellaneous Contracts

These contracts don't fit in any other categories. Here is an attempt to summarize these misfit contracts.

Bind contracts
These contracts are designed specifically for the Scrollbar and Spin button SmartElements. These contracts bind the said ActiveX controls to edit boxes on the layout. Try it out, they're pretty slick.

Wait a specified time
These contracts are designed to insert delays between other contracts. It turns out you can adjust the order in which contracts are executed. This can be done in the Drumbeat "show all interactions on this page" view. By applying one of the "Wait a specified time…" contracts and adjusting the order of contracts you can cause delays between contract execution.

Really Miscellaneous Contracts
The remainder of the contracts in this category are a catch all of odd ball contracts. Have a look at the descriptions for more information.
