1.2 Distribution

WebMaker is Copyright © 1995-1996 Pascal~Rullier

This software is not a Public Domain. You can freely distribute if:

- no more then a reasonable fee is charged for copying or down-loading;
- no file in this distribution is changed;
- the distribution is not part of a commercial product.

Although WebMaker has been thoroughly tested, no guarantee is given nor implied that this program is fit for any use. The program and the information within this text is provided on an "as is" basis. In no event will I be liable for any direct, indirect, incidental, or consequential damages resulting from the use of this program or the

information presented within this text.

Commercial distribution of WebMaker or of a package containing WebMaker requires my~approval.

1.3 Introduction

Introduction

Since a long time, I has the idea to build a HTML pagemaker. I saw other tools running under other plateforms, like TkhML, or recently WebMagic.

The idea to make HTML pages only with a text editor like vi, emacs could be possible with macros which insert HTML tags. It's the case for HTML-Heaven. It was my first idea. But under Amiga, with a so-easy-to-use environment so drag&drop, with powerfull MUI GUI, WebMaker should be respect this builder spirit.

All products are registered to their authors.

1.4 Installation

Installation

WebMaker need to work fine :

- textfield.gadget (copy classes/gadgets/textfield.gadget into your sys:classes/gadgets drawer, also avail on aminet dev/gui)
- MUI 3.1+ (if you use 3.0, update in 3.1)
- AmigaOS 3.x+
- images datatypes gif, etc...

Click on icon to start...

WebMaker is looking for its localization, the drawer prodir:catalogs/your_language .

WebMaker need the drawer prodir:images

If you use MagicMenu or/and CycleMenu, You *MUST* install the SafeGIRPort patch, available in textfield archive

1.5 The Way to Use

Using

After running, WebMaker opens an text-edit window. Hit your text and drog icons.

You want set a bit of text in bold, for example. Select the text and click under B gadget, or go to menus.

The main idea is the insert tags into buffer happens where the cursor is. The text style attributes must be done on selected text.

The use is very intuitive.

All cut-copy-paste functions are enabled (A-c A-v A-b A-x)
Erase function (A-e) puts buffer into undo buffer.

For all complete textfield use, please refer to its documentation.

1.6 History

The history *must* be in English

```
12/02/95 1.0B3 Link Colors implemented using palette.mui
           Tables, Cancel Saving bug fixed
           Comment bug fixed (Thanks _AG_)
12/13/95 1.0B4 Localisation, all menus items implemented,
           add Width and Height Image attributes
12/14/95 1.0B5 Add Show Picture function
12/19/95 1.0B6 Add Bubbles - Asl Open Window fixed - French Catalog and
           Documentations, New Text Gadgets (Bold, U, I),
           tests made by Bétatesters

1/3/96    Fix save as bug if file doesn't exist, add "include file"
           menu item, fix translation word "Opened",
           using SafeMem *8) ET
1/5/96    1.1B Parsing HTML File for setting Roots, pick links *8)
1/9/96    1.1B2 Add open test, fix status bug, add conversion ISO to entities
           Add Edit Menu.
```

1.7 Who thanks ?

Credits

I would like to thanks :

```
- All my BétaTesters
_AG_   Alain.... Gaspard..   agaspard@alienor.fr
marcov Vincent Demarquez    marcov@mail.atlantic-line.fr

 C Italian Alessandro Agostinelli <agos001@IT.net>

Catalog Documentation * choosen

- All over-world WebMaker Fans.

- My "Muse"

Eric 'ET' Totel for his wonderfull tool MUIBuilder,
 Stefan Stuntz for MUI,
 The creator of tkHTML,
 SGI for its WorkBench-Like Workspace
 (SGI was made in 1987 S-)

- All the people who makes our wonderfull computer more and more powerfull
 in this use (PD developers, ...)

1.8 The Twilight Zone

Future

WebMaker will be WYSIWYG ... Drag & Drop à gogo... to insert pictures,
 texts, sounds, links !!!

1.x releases will be not WYSIWYG and without preview window.
 2.x releases will have full preview window.
 3.x releases will be WYSIWYG.

Create is so easy.

I'm planning :

- NetWeb , a Web Navigator but independent multi-taking multi-windows
 - maybe a HTML datatype ... *8) NetSurf only with MultiView !!!
 Too easy, isn't?

1.9 Contacting the author ...

Contact

Webmaker is ShareWare, but 100% usable, if you want to send something :
hard (I'm looking for an accelerator board for my poor A2000,
and an graphic board, soft (Genius PD You have made), or anything.

If you are happy, unhappy, let me know. Your remarks are "builderfull".

I'm looking for translators for others languages.
I have included the Catalog descriptor to make your own.
Use Catedit to manage your catalog
Please send me it for including in my next release.
