

KEYNOTE

**Version** : 1.4  
Copyright : (C) Marek Jedlinski 2001  
License : Freeware / Open Source (MPL)  
**Updated** : 12 March 2002

If you have never used KeyNote before, please open the file **"sample.knt"** once you install the program. The file contains some usage hints and contact information. Full details of latest changes are contained in the file **"history.txt"** - please see this file if you have used KeyNote before.

There are now two mailing lists for users of KeyNote and other freeware programs I have written. The file "readme.txt" has details about subscribing to those lists.

**IMPORTANT FOR USERS UPGRADING FROM VERSION EARLIER THAN 0.90!**

For best results, please CANCEL the installation now, and UNINSTALL the previous version of KeyNote from your system. Also, manually delete the KEYNOTE.INI file. Make sure you do NOT delete your data (\*.KNT) files! Then install this new version of Keynote.

As of version 0.90, KeyNote supports two major new features: **encrypting the KeyNote files** and **creating Tree-type notes**. These features are incompatible with any previous release of KeyNote. Therefore, encrypted files or files which contain Tree-type notes cannot be opened using any version of KeyNote earlier than 0.90. However, any file that does NOT use these features will be automatically saved in a format that is compatible with earlier releases of KeyNote.
