

Version 7.4

31 May 2003

- * Reliable optimizing of JavaScript (.js) and VisualBasicScript (.vbs) files. Previous versions could corrupt code in certain cases.

Version 7.3

(never published)

Version 7.2

15 February 2003

- * Improved the optimizer engine that handles script code, e.g. JavaScript.

Version 7.1.1

8 February 2003

- * Added a tip about <NOOP> </NOOP> tags to the Tips window.
- * Fixed a bug that could corrupt script code when adding Alt attributes.
- * Added a warning for files in your web folder that have names longer than 31 characters.

Version 7.1

25 January 2003

- * Offers a choice between date+time sensitive and current date sensitive Smart Handling.
- * Added a Tips window that appears at startup.

Version 7.0

21 December 2002

- * The program has been simplified so that it's easier to use and better fits within our range of optimizers.
- * The functions Check Tags, Check Links and Convert Special Characters have been skipped. These are now only available in HTML-Optimizer Pro and Web Site Maestro.
- * Smart Handling has been improved and is now date+time sensitive.

Version 6.2.1

12 November 2002

- * Added support for .vbs files
- * Removes by default all meta generator tags.

Version 6.2

19 October 2002

- * Added a wizard to guide you through the configuration process at first startup.
- * Improved the tutorial and added a test web folder to demonstrate the program's capabilities.
- * Optimized the application for use with Mac OS X 10.2 (Jaguar).
- * Improved the optimizer engine.

- * Less preparation time with link checking.
- * Fixed some bugs related to working with XHTML files.
- * Fixed a bug that could cause the application to crash when pressing the View Code button.
- * Added a horizontal scrollbar to the text fields in order to make the View Code bug fix possible.
- * Fixed some minor bugs.

Version 6.1.1

30 August 2002

- * Added the option to remove spurious white space caused by some HTML Editors.
- * This version is an important bug fix:
You have a fair chance that any error(s) and/or shortcoming(s) that you may have encountered in the past are over now. We recommend that every HTML-Optimizer User downloads this version.

Version 6.1

6 July 2002

- * Added a command to the Configure menu to choose a browser to view your web pages. Previously Internet Explorer was always used despite your Internet preferences.
- * Added a separate HTML Manual - identical to the manual in the program.
- * Added a Tutorial for First-Users.
- * Added a Save File command to the File menu that does the same as pressing the Hide button after editing text but without a dialog.
- * Added a menu command "Check for Update" to the HTML-Optimizer menu.
- * Made the menu command 'Choose New Web Folder...' more user-friendly.
- * Any script code between <? and ?> tags is now dealt with separate from the main HTML code and can be controlled by the upper two Script checkboxes in Optimization Options in Preferences.
- * Fixed a bug in the 'Adding missing width and height attributes' option that caused that it did not work for (graphic) files with a relative path (in subfolders with own index file).
- * Improved the 'Adding missing width and height attributes' option in such a way that it can add a Height attribute if only the Width attribute is present or add a Width attribute if only the Height attribute is present (previously it only added both if both were not present)
- * Fixed a bug that caused that space was unintentionally removed from text in some cases.
- * Fixed a bug that could cause the program to hang when removing redundant editor tags.
- * Fixed a bug that corrupted php script.
- * Fixed a 'File not found' error when handling a file from outside the web folder.
- * Corrected a wrong caption in the 'Remove Comments from (X)HTML Code' checkbox in the Preferences window.
- * Removed the option to add missing </P> tags because it proved to be unreliable.

Version 6.0

First release of the totally rewritten application on 20 May 2002.
