

## **MSVCRT20.DLL README**

If you are a Windows 3.1x user, certain system components can be upgraded by different manufacturer's installers. For example, installing Microsoft Office updates the MSVCRT20.dll file from the 16-bit version (installed by Windows 3.1x) to the more recent 32-bit version.

The 32-bit version of MSVCRT20.dll is not compatible with Adobe PhotoDeluxe when operated on Win 3.1x systems. If you launch Adobe PhotoDeluxe and receive the error "WIN32s Error: At least one system component is out of date." or "This version of MSVCRT20.dll is not compatible with Win32s", then you will need to replace your copy of MSVCRT20.dll with the copy located on the PhotoDeluxe CD.

Copy the file "MSVCRT20.dll" from Extras/Misc/Win31 to your Windows/System directory and restart Windows.

By installing the 16-bit version of the MSVCRT20.dll, you are restoring the native Windows 3.1x configuration for Adobe PhotoDeluxe, enabling the program to launch without the associated MSVCRT20.dll errors.
