[Using the Find+ Tab](#)

Features and Benefits

The WinHelp Compatibility Wizard lets you add Windows 95 features to Windows 3.x files, without using the Windows 95 Help Compiler. This means that you can create the Windows 95 look and feel while operating in the Windows 3.x environment.

Using the Contents Tab

The Contents Tab reveals a hierarchical view of the Help system. It allows users to explore a Help system visually and access a desired topic instantly.

Using the Index Tab

The Index Tab works like a traditional book index. It lists keywords alphabetically; these keywords help the user search for a desired topic.

Using the Find+ Tab

The Find+ Tab provides access to a full-text search, incorporating every occurrence of a selected word or context string within a Help file.
