

WinWAP Pro is a browser that reads WML (Wireless Markup Language) formatted data. WML is the language that wireless mobile phones and pages use to access the Internet. WinWAP has the feel and functionality of any standard HTML browser. However, instead of reading HTML, WinWAP Pro is designed exclusively for WML. It can also be used to connect directly to WAP gateways just as with a wireless phone. Plus, it can open WML files from any local or network drive.
