Minimum Requirements
BeBox™ or PowerMac™ running BeOS DR9 or later
16MB of RAM minimum (32MB for Java development)
30MB of free disk space

metrowerks

Unleash the power of the BeOS™! CodeWarrior for BeOS includes an Integrated Development Environment (IDE) interface which Metrowerks has adapted to utilize features of the BeOS. This powerful and intuitive IDE interface has earned Metrowerks multiple awards and won programmers' hearts all over the world. Front-end/back-end architecture, state-of-the-art tools and consistently strong technical support are just a few of the reasons CodeWarrior has become the number-one selling Macintosh® development suite in the world. Now the same professional, reliable IDE is available to you with CodeWarrior for the new Preview Release of BeOS. CodeWarrior for BeOS puts all the familiar CodeWarrior features at your fingertips: a BeOS PowerPC compiler and linker, an editor with syntax coloring and styling, a source-level debugger, headers & libraries, reference files and online documentation, useful C++ classes and sample code. Now you can even develop and run Java™ projects on the BeOS with CodeWarrior. With these tools and your imagination you can begin to harness the untapped power of the cutting-edge BeOS.
