**COMMON MANAGEMENT INFORMATION
PROTOCOL SPECIFICATION
FOR CCITT APPLICATIONS**

Recommendation X.711

Geneva, 1991

Printed in Switzerland

FOREWORD

The CCITT (the International Telegraph and Telephone Consultative Committee) is the permanent organ of the International Telecommunication Union (ITU). CCITT is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The Plenary Assembly of CCITT which meets every four years, establishes the topics for study and approves Recommendations prepared by its Study Groups. The approval of Recommendations by the members of CCITT between Plenary Assemblies is covered by the procedure laid down in CCITT Resolution No. 2 (Melbourne, 1988).

Recommendation X.711 was prepared by Study Group VII and was approved under the Resolution No. 2 procedure on the 22nd of March 1991.

CCITT NOTE

In this Recommendation, the expression “Administration” is used for conciseness to indicate both a telecommunication Administration and a recognized private operating agency.

<i>Annex C — Examples of CMISE ROSE APDUs</i>	

1 Scope

This Recommendation specifies a protocol which is used by application layer entities to exchange management information.

This Recommendation specifies:

- procedures for the transmission of management information between application entities;
- the abstract syntax of the Common Management Information Protocol (CMIP) and the associated encoding rules to be applied;
- procedures for the correct interpretation of protocol control information;
- the conformance requirements to be met by implementation of this Recommendation.

This Recommendation does not specify:

- the structure or meaning of the management information that is transmitted by means of CMIP;
- the manner in which management is accomplished as a result of CMIP exchanges;
- the interactions which result in the use of CMIP.

¹⁾ Recommendation X.711 and ISO/IEC 9596, *Information technology — Open systems interconnection — Common management information protocol specification* were developed in close collaboration and are technically identical.

3 Definitions

For the purposes of this Recommendation, the following definitions apply.

3.1 Basic Reference Model definitions

This Recommendation makes use of the following terms defined in Recommendation X.200 [1]:

- a) application-service-element;
- b) application-process;
- c) real open system;
- d) systems-management.

3.2 Management Framework definitions

This Recommendation makes use of the following terms defined in ISO/IEC 7498-4 [2]:

- a) managed object;
- b) management information;

- c) management information base;
- d) systems management application-entity.

3.3 *Remote Operations definitions*

This Recommendation makes use of the following terms defined in Recommendation X.219 [8]:

- a) association-initiator;
- b) association-responder;
- c) linked-operations;
- d) Remote Operations;
- e) Remote Operation Service Element;
- f) invoker;
- g) performer;
- h) Association Class;
- i) Operation Class.

3.4 *CMIS definitions*

This Recommendation makes use of the following terms defined in Recommendation X.710 [12]:

- a) attribute;
- b) common management information service element;
- c) common management information services;
- d) CMISE-service-provider;
- e) CMISE-service-user;
- f) invoking CMISE-service-user;
- g) performing CMISE-service-user.

3.5 *ACSE definitions*

This Recommendation makes use of the following terms defined in Recommendation X.217 [7]:

- a) application context;
- b) application-association;
- c) association.

3.6 *Presentation definitions*

This Recommendation makes use of the following terms defined in Recommendation X.216 [6]:

- a) abstract syntax;
- b) transfer syntax.

4 **Symbols and abbreviations**

ACSE	Association Control Service Element
APDU	Application protocol data unit
ASE	Application Service Element
ASN.1	Abstract Syntax Notation One

TABLE 1/X.711

CMIP	Common management information protocol
CMIPM	Common management information protocol machine
CMIS	Common Management Information service
CMISE	Common Management Information Service Element
DCS	Defined context set
PCI	Protocol control information
PDU	Protocol data unit
PICS	Protocol implementation conformance statement
RO	Remote operations
ROSE	Remote Operations Service Element
SMAE	Systems management application-entity

5 Overview

The common management information protocol (CMIP) specifies protocol elements that may be used to provide the operation and notification services described in Recommendation X.710 [12], which defines the Common Management Information Services (CMIS).

5.1 Service provided

The protocol specified in this Recommendation supports the services defined in Recommendation X.710 [12]. These services are summarized in Table 1/X.711.

Service	Type
M-CANCEL-GET	confirmed
M-EVENT-REPORT	confirmed/non-confirmed
M-GET	confirmed
M-SET	confirmed/non-confirmed
M-ACTION	confirmed/non-confirmed
M-CREATE	confirmed
M-DELETE	confirmed

5.2 *Underlying services*

This Recommendation uses the RO-INVOKE, RO-RESULT, RO-ERROR and RO-REJECT-U services of the Remote Operations Service Element (ROSE) defined in Recommendation X.219 [8]. ROSE assumes the use of the presentation service defined in Recommendation X.216 [6]. The confirmed operations of CMIP are operation class 2 (asynchronous) or operation class 1 (synchronous) as required by the application. The choice of operation class is a local matter. The unconfirmed operations of CMIP are operation class 5 (asynchronous, outcome not reported). CMIP uses Association class 3.

If the extended service functional unit is successfully negotiated, ROSEapdus may be mapped on to presentation services other than the P-DATA service.

Note — For example, it may be necessary to modify the presentation defined context set (DCS) when the CMIP operation is sent to the peer CMISE-service-user. In this case, the ROSE APDU which carries the CMIP operation will be mapped onto the P-ALTER-CONTEXT service which is also used to perform the changes to the DCS.

Details of which other presentation services are required and how they are used, are described in the description of the application context in use on the association.

5.2.1 *Service assumed from the ACSE*

This Recommendation assumes the use of the A-ASSOCIATE, A-RELEASE, A-ABORT, and A-P-ABORT services of the Association Control Service Element.

5.2.2 *Service assumed from the presentation layer*

Recommendation X.229 [11] assumes the use of the P-DATA service of the presentation layer for the transfer of the RO-INVOKE, RO-RESULT, RO-ERROR and RO-REJECT PDUs.

5.3 *Management information definitions*

This Recommendation defines the abstract syntax of the Common Management Information Protocol. Attributes specific to a particular managed object are specified by the Recommendation which defines that object.

6 **Elements of procedure**

This clause provides definition for the procedural elements of the CMIP. The procedures define the transfer of CMIP PDUs whose structure, coding and relationship with the CMIS service primitives is specified in § 7.

The Common Management Information Protocol Machine (CMIPM) accepts CMIS request and response service primitives, and issues CMIP PDUs initiating specific elements of procedure as specified in this clause.

A CMIPM shall accept any well-formed CMIP PDU, and pass it to the performing CMISE-service-user for processing, by means of CMIS indication and confirmation service primitives. If the received PDU is not well formed or does not contain a supported notification or operation, a PDU is returned indicating that the received PDU has been rejected.

TABLE 2/X.711

Correspondence between CMIS and ROSE parameters

The procedures indicate only how to interpret the various fields in the CMIP PDU, not what an invoking CMISE-service-user should do with the information it requests nor how a performing CMISE-service-user should process the invocation.

6.1 *Association establishment*

The establishment of an association involves two CMISE-service-users, one that is the association-initiator and one that is the association-responder.

A CMISE-service-user may initiate an association establishment by using the A-ASSOCIATE service of Recommendation X.217 [7].

The application context specifies, among other things, the rules required for the coordination of initialisation information corresponding to different ASEs. The association rules for CMISE are specified in Annex A.

6.2 *Remote operations*

6.2.1 *RO elements of procedure*

The CMIP elements of procedure rely on the following underlying remote operations elements of procedure

- a) invocation;
- b) return-result;
- c) return-error;
- d) user-reject;
- e) provider-reject.

These elements of procedure are described fully in Recommendation X.229 [11].

Table 2/X.711 specifies the correspondence between CMIS and ROSE parameters.

CMIS parameter	ROSE parameter
Invoke identifier	InvokeID
Linked identifier	Linked-ID

The correspondence between other CMIS and ROSE parameters is specified in § 7.

TABLE 3/X.711

**Mapping RO-Reject-User. Invoke-problem
to CMISE error codes**

6.2.2 *RO-Reject problem parameters*

The RO-Reject problem parameters are mapped or processed as follows

6.2.2.1 RO-Reject-User.Invoke-problem mapping to CMISE error codes is specified in Table 3/X.711.

RO-REJECT parameter	CMISE error code
duplicate-invocation	duplicate invocation
mistyped-argument	mistyped argument
resource-limitation	resource limitation
unrecognized-operation	unrecognized operation

Other Invoke-problem parameters are a local matter.

6.2.2.2 Other RO-Reject parameters will be handled as a local matter.

6.3 *Event reporting procedure*

6.3.1 *Invocation*

The event reporting procedures are initiated by the M-EVENT-REPORT request primitive.

On receipt of the M-EVENT-REPORT request primitive, the CMIPM shall

- a) in the confirmed mode, construct an APDU requesting the m-EventReport-Confirmed operation, otherwise, construct an APDU requesting the m-EventReport operation;
- b) send the APDU using the RO-INVOKE procedure.

6.3.2 *Receipt*

On receipt of an APDU requesting either the m-EventReport or m-EventReport-Confirmed operation, the CMIPM shall, if the APDU is well formed, issue an M-EVENT-REPORT indication primitive to the CMISE-service-user with the mode parameter indicating whether or not confirmation is requested, otherwise, construct an APDU containing notification of the error and send it using the RO-REJECT-U procedure.

6.3.3 *Response*

In the confirmed mode, the CMIPM shall accept an M-EVENT-REPORT response primitive and shall

- a) construct an APDU confirming the M-EVENT-REPORT notification;
- b) if the parameters in the M-EVENT-REPORT response primitive indicate that the notification was accepted, send the APDU using the RO-RESULT procedure, otherwise, send the APDU using the RO-ERROR procedure.

6.3.4 *Receipt of response*

On receipt of an APDU responding to an M-EVENT-REPORT notification, the CMIPM shall, if the APDU is well formed, issue an M-EVENT-REPORT confirmation primitive to the CMISE-service-user, thus completing the notification procedure, otherwise, construct an APDU containing notification of the error and send it using the RO-REJECT-U procedure.

6.4 *Get procedure*

6.4.1 *Invocation*

The Get procedures are initiated by the M-GET request primitive.

On receipt of the M-GET request primitive, the CMIPM shall

- a) construct an APDU requesting the m-Get operation;
- b) send the APDU using the RO-INVOKE procedure.

6.4.2 *Receipt*

On receipt of an APDU requesting the m-Get operation, the CMIPM shall, if the APDU is well formed, issue an M-GET indication primitive to the CMISE-service-user, otherwise, construct an APDU containing notification of the error and send it using the RO-REJECT-U procedure.

6.4.3 *Response*

The CMIPM shall

- a) accept zero or more M-GET response primitives containing a linked-ID followed by a single M-GET response primitive without a linked-ID;
- b) or each M-GET response primitive containing a linked-ID the CMIPM shall
 - construct an APDU requesting the m-Linked-Reply operation with LinkedReplyArgument set appropriately as either getListError, getResult or processingFailure;
 - send each APDU using the RO-INVOKE procedure
- c) for the M-GET response primitive not containing a linked-ID the CMIPM shall
 - construct an APDU confirming the m-Get operation;
 - if the parameters in the M-GET response primitive indicate that the operation was performed correctly, send the APDU using the RO-RESULT procedure. If the parameters in the M-GET response primitive indicate that the operation was performed with partial success or was not performed because of an error, send the APDU using the RO-ERROR procedure.

6.4.4 *Receipt of response*

On receipt of an APDU responding to an m-Get operation, the CMIPM shall

- a) if the APDU included a linked-ID and is well formed, issue an M-GET confirm primitive to the CMISE-service-user;
- b) if the APDU is the last response (i.e. not containing a linked-ID) and is well formed, issue an M-GET confirmation primitive to the CMISE-service-user, thus completing the M-GET procedure;
- c) if the APDU is not well formed, construct an APDU containing notification of the error and send it using the RO-REJECT-U procedure.

6.4.5 *CancelGet procedure*

6.4.5.1 *Invocation*

The CancelGet procedures are initiated by the M-CANCEL-GET request primitive.

On receipt of the M-CANCEL-GET request primitive, the CMIPM shall

- a) construct an APDU requesting the m-CancelGet operation;
- b) send the APDU using the RO-INVOKE procedure.

6.4.5.2 *Receipt*

On receipt of an APDU requesting the m-CancelGet operation, the CMIPM shall, if the APDU is well formed, issue an M-CANCEL-GET indication primitive to the CMISE-service-user, otherwise, construct an APDU containing notification of the error and send it using the RO-REJECT-U procedure.

6.4.5.3 *Response*

The CMIPM shall:

- a) construct an APDU confirming the m-CancelGet operation;
- b) if the parameters in the M-CANCEL-GET response primitive indicate that the operation was performed correctly, send the APDU using the RO-RESULT procedure otherwise, send the APDU using the RO-ERROR procedure. If the M-CANCEL-GET operation is successful, the performing CMISE-service-user shall cease from sending linked replies to the M-GET operation and shall issue an M-GET response primitive which shall contain the “operation cancelled” error.

6.4.5.4 *Receipt of response*

On receipt of an APDU responding to an m-CancelGet operation, the CMIPM shall, if the APDU is well formed, issue an M-CANCEL-GET confirm primitive to the CMISE-service-user, otherwise, construct an APDU containing notification of the error and send it using the RO-REJECT-U procedure.

6.5 *Set procedure*

6.5.1 *Invocation*

The Set procedures are initiated by the M-SET request primitive.

On receipt of the M-SET request primitive, the CMIPM shall

- a) in the confirmed mode, construct an APDU requesting the m-Set-Confirmed operation, otherwise, construct an APDU requesting the m-Set operation,
- b) send the APDU using the RO-INVOKE procedure.

6.5.2 *Receipt*

On receipt of an APDU requesting the m-Set or m-Set-Confirmed operation, the CMIPM shall, if the APDU is well formed, issue an M-SET indication primitive to the CMISE-service-user, with the mode parameter indicating whether or not confirmation is requested, otherwise, construct an APDU containing notification of the error and send it using the RO-REJECT-U procedure.

6.5.3 *Response*

In the confirmed mode, the CMIPM shall:

- a) accept zero or more M-SET response primitives containing a linked-ID followed by a single M-SET response primitive without a linked-ID;
- b) for each M-SET response primitive containing a linked-ID the CMIPM shall
 - construct an APDU requesting the m-Linked-Reply operation with LinkedReplyArgument set appropriately as either setListError, setResult or processingFailure;
 - send each APDU using the RO-INVOKE procedure;
- c) for the M-SET response primitive not containing a linked-ID the CMIPM shall
 - construct an APDU confirming the m-Set operation;
 - if the parameters in the M-SET response primitive indicate that the operation was performed correctly, send the APDU using the RO-RESULT procedure. If the parameters in the M-SET response primitive indicate that the operation was performed with partial success or was not performed because of an error, send the APDU using the RO-ERROR procedure.

6.5.4 *Receipt of response*

On receipt of an APDU responding to an m-Set-Confirmed operation, the CMIPM shall

- a) if the APDU included a linked-ID and is well formed, issue an M-SET confirm primitive to the CMISE-service-user;
- b) if the APDU is the last response (i.e. not containing a linked-ID) and is well formed, issue an M-SET confirmation primitive to the CMISE-service-user, thus completing the M-SET procedure;
- c) if the APDU is not well formed, construct an APDU containing notification of the error and send it using the RO-REJECT-U procedure.

6.6 *Action procedure*

6.6.1 *Invocation*

The Action procedures are initiated by the M-ACTION request primitive.

On receipt of the M-ACTION request primitive, the CMIPM shall

- a) in the confirmed mode, construct an APDU requesting the m-Action-Confirmed operation otherwise, construct an APDU requesting the m-Action operation,
- b) send the APDU using the RO-INVOKE procedure.

6.6.2 *Receipt*

On receipt of an APDU requesting the m-Action or m-Action-Confirmed operation, the CMIPM shall, if the APDU is well formed, issue an M-ACTION indication primitive to the CMISE-service-user, with the mode parameter indicating whether or not confirmation is requested, otherwise, construct an APDU containing notification of the error and send it using the RO-REJECT-U procedure.

6.6.3 *Response*

In the confirmed mode, the CMIPM shall

- a) accept zero or more M-ACTION response primitives containing a linked-ID followed by a single M-ACTION response primitive without a linked-ID;
- b) for each M-ACTION response primitive containing a linked-ID the CMIPM shall
 - construct an APDU requesting the m-Linked-Reply operation with LinkedReplyArgument set appropriately as either actionError, actionResult or processingFailure;
 - send each APDU using the RO-INVOKE procedure;
- c) for the M-ACTION response primitive not containing a linked-ID the CMIPM shall
 - construct an APDU confirming the m-Action operation;
 - if the parameters in the M-ACTION response primitive indicate that the operation was performed correctly, send the APDU using the RO-RESULT procedure, otherwise, send the APDU using the RO-ERROR procedure.

6.6.4 *Receipt of response*

On receipt of an APDU responding to an m-Action-Confirmed operation, the CMIPM shall

- a) if the APDU included a linked-ID and is well formed, issue an M-ACTION confirm primitive to the CMISE-service-user;
- b) if the APDU is the last response (i.e. not containing a linked-ID) and is well formed, issue an M-ACTION confirmation primitive to the CMISE-service-user, thus completing the M-ACTION procedure;
- c) if the APDU is not well formed, construct an APDU containing notification of the error and send it using the RO-REJECT-U procedure.

6.7 *Create procedure*

6.7.1 *Invocation*

The Create procedures are initiated by the M-CREATE request primitive.

On receipt of the M-CREATE request primitive, the CMIPM shall

- a) construct an APDU requesting the m-Create operation,
- b) send the APDU using the RO-INVOKE procedure.

6.7.2 *Receipt*

On receipt of an APDU requesting the m-Create operation, the CMIPM shall, if the APDU is well formed, issue an M-CREATE indication primitive to the CMISE-service-user, otherwise, construct an APDU containing notification of the error and send it using the RO-REJECT-U procedure.

6.7.3 *Response*

The CMIPM shall accept an M-CREATE response primitive and shall

- a) construct an APDU confirming the m-Create operation,
- b) if the parameters in the M-CREATE response primitive indicate that the operation was performed correctly, send the APDU using the RO-RESULT procedure, otherwise, send the APDU using the RO-ERROR procedure.

6.7.4 *Receipt of response*

On receipt of an APDU responding to an m-Create operation, the CMIPM shall, if the APDU is well formed, issue an M-CREATE confirmation primitive to the CMISE-service-user, thus completing the M-CREATE procedure, otherwise, construct an APDU containing notification of the error and send it using the RO-REJECT-U procedure.

6.8 *Delete procedure*

6.8.1 *Invocation*

The Delete procedures are initiated by the M-DELETE request primitive.

On receipt of the M-DELETE request primitive, the CMIPM shall

- a) construct an APDU requesting the m-Delete operation,
- b) send the APDU using the RO-INVOKE procedure.

6.8.2 *Receipt*

On receipt of an APDU requesting the m-Delete operation, the CMIPM shall, if the APDU is well formed, issue an M-DELETE indication primitive to the CMISE-service-user, otherwise, construct an APDU containing notification of the error and send it using the RO-REJECT-U procedure.

6.8.3 *Response*

The CMIPM shall

- a) accept zero or more M-DELETE response primitives containing a linked-ID followed by a single M-DELETE response primitive without a linked-ID;
- b) for each M-DELETE response primitive containing a linked-ID the CMIPM shall
 - construct an APDU requesting the m-Linked-Reply operation with LinkedReplyArgument set appropriately as either deleteError, deleteResult or processingFailure;
 - send each APDU using the RO-INVOKE procedure;
- c) for the M-DELETE response primitive not containing a linked-ID the CMIPM shall
 - construct an APDU confirming the m-Delete operation;
 - if the parameters in the M-DELETE response primitive indicate that the operation was performed correctly, send the APDU using the RO-RESULT procedure, otherwise, send the APDU using the RO-ERROR procedure.

6.8.4 *Receipt of response*

On receipt of an APDU responding to an m-Delete operation, the CMIPM shall

- a) if the APDU included a linked-ID and is well formed, issue an M-DELETE confirm primitive to the CMISE-service-user;
- b) if the APDU is the last response (i.e. not containing a linked-ID) and is well formed, issue an M-DELETE confirmation primitive to the CMIS-service-user, thus completing the M-DELETE procedure;
- c) if the APDU is not well formed, construct an APDU containing notification of the error and send it using the RO-REJECT-U procedure.

6.9 *Association orderly release*

Either CMISE-service-user may initiate an orderly release of the association by using the A-RELEASE service of Recommendation X.217 [7].

Note — This specification is different from the ROSE use of the BIND operation in which only the association-initiator may use the A-RELEASE procedure.

6.10 *Association abrupt release*

Either CMISE-service-user may initiate an abrupt release of the association using the A-ABORT service of Recommendation X.217 [7].

The CMISE-service-provider may initiate an abrupt release of the association using the A-P-ABORT service of Recommendation X.217 [7].

7 **Abstract syntax**

This clause specifies the abstract syntax for the CMIP PDUs.

7.1 *Conventions*

The abstract syntax is defined using the notation specified in Recommendation X.208 [3]. The ASN.1 MACRO productions used or referenced by this Recommendation do not exercise the ambiguous aspects of the grammar.

For each of the CMISE service parameters which is to be transferred by a CMIP PDU, there is a PDU field (an ASN.1 NamedType) with the same name as the corresponding service parameter (see Recommendation X.710 [12]), except for the differences required by the use of ASN.1, which are that blanks between words are removed and the first letter of the following word is capitalized, e.g. “managed object class” becomes “managedObjectClass”. To make some of the names shorter, some words are abbreviated as follows:

ack	acknowledgement
arg	argument
id	identifier
info	information
sync	synchronization.

TABLE 4/X.711

Correspondence between CMISE primitives and CMIP operations

CMIS primitive	Mode	Linked-ID	CMIP operation
M-CANCEL-GET req/ind	Confirmed	Not applicable	m-Cancel-Get-Confirmed
M-CANCEL-GET rsp/conf	Not applicable	Not applicable	m-Cancel-Get-Confirmed
M-EVENT-REPORT req/ind	Non-confirmed	Not applicable	m-EventReport
M-EVENT-REPORT req/ind	Confirmed	Not applicable	m-EventReport-Confirmed
M-EVENT-REPORT rsp/conf	Not applicable	Not applicable	m-EventReport-Confirmed
M-GET req/ind	Confirmed	Not applicable	m-Get
M-GET rsp/conf	Not applicable	Absent	m-Get
M-GET rsp/conf	Not applicable	Present	m-Linked-Reply
M-SET req/ind	Non-confirmed	Not applicable	m-Set
M-SET req/ind	Confirmed	Not applicable	m-Set-Confirmed
M-SET rsp/conf	Not applicable	Absent	m-Set-Confirmed
M-SET rsp/conf	Not applicable	Present	m-Linked-Reply
M-ACTION req/ind	Non-confirmed	Not applicable	m-Action
M-ACTION req/ind	Confirmed	Not applicable	m-Action-confirmed
M-ACTION rsp/conf	Not applicable	Absent	m-Action-confirmed
M-ACTION rsp/conf	Not applicable	Present	m-Linked-Reply
M-CREATE req/ind	Confirmed	Not applicable	m-Create
M-CREATE rsp/conf	Not applicable	Not applicable	m-Create
M-DELETE req/ind	Confirmed	Not applicable	m-Delete
M-DELETE rsp/conf	Not applicable	Absent	m-Delete
M-DELETE rsp/conf	Not applicable	Present	m-Linked-Reply

Note — The mapping from the OPERATION and ERROR macros to ROSE is as defined in Recommendation X.219 [8]

7.3 ACSE user data

The ACSE protocol (Recommendation X.227 [10]) is described using ASN.1. The “user information” is defined using the EXTERNAL data type.

7.3.1 A-ASSOCIATE user data

The encoding of the CMIP user information to be passed to A-ASSOCIATE in the “user information” parameter is defined as follows:

CMIP-A-ASSOCIATE-Information {joint-iso-ccitt ms(9) cmip(1) modules(0) aAssociateUserInfo(1)}

DEFINITIONS ::= BEGIN

FunctionalUnits ::= BIT STRING {

multipleObjectSelection (0),

filter (1),

multipleReply (2),

extendedService (3),

cancelGet (4)

}

-- Functional unit *i* is supported if and only if bit *i* is one

-- Information carried in user-information parameter of A-ASSOCIATE

CMIPUserInfo ::= SEQUENCE {

protocolVersion [0] IMPLICIT ProtocolVersion DEFAULT { version1 },

functionalUnits [1] IMPLICIT FunctionalUnits DEFAULT {},

accessControl [2] EXTERNAL OPTIONAL,

userInfo [3] EXTERNAL OPTIONAL

}

ProtocolVersion ::= BIT STRING {

version1 (0),

version2 (1)

}

Note — This Recommendation specifies protocol version 2 for technical compatibility with ISO/IEC 9596-1: 1991.

END

The encoding of other “user information” supplied by the CMISE-service user is not defined by this Recommendation.

7.3.2 A-ABORT user data

The encoding of the CMIP user information to be passed to A-ABORT in the “user information” parameter is defined as follows

CMIP-A-ABORT-Information {joint-iso-ccitt-ms(9) cmip(1) modules(0) aAbortUserInfo(2)}

DEFINITIONS ::= BEGIN

-- Information carried in user-information parameter of A-ABORT

CMIPAbortInfo ::= SEQUENCE {

abortSource [0] IMPLICIT CMIPAbortSource,

userInfo [1] EXTERNAL OPTIONAL

}

```

CMIPAbortSource ::= ENUMERATED {
    cmiseServiceUser          (0),
    cmiseServiceProvider      (1)
}
END

```

The encoding of other “user information” supplied by the CMISE-service user is not defined by this Recommendation.

7.4 CMIP data units

The protocol is described in terms of Common Management Information Protocol Data Units exchanged between the peer CMISEs. The PDUs are specified using ASN.1 and the Remote Operations Protocol OPERATION and ERROR external macros defined in Recommendation X.219 [8].

-- Common Management Information Protocol (CMIP)

```

CMIP-1 {joint-iso-ccitt-ms(9) cmip(1) modules(0) protocol(3)}

```

```

DEFINITIONS ::= BEGIN

7.5 *Definition of abstract syntax for CMIP*

This Recommendation assigns the ASN.1 object identifier value

{joint-iso-ccitt ms(9) cmip(1) cmip-pci(1) abstractSyntax(4)}

as an abstract syntax name for the set of presentation data values, each of which is either a value of the ASN.1 type

Remote-Operations-APDUs.ROSEapdus

as defined in Recommendation X.229 [11] with the argument component filled according to the definitions in CMIP-1, or a value of one of the ASN.1 types:

- **CMIP-A-ASSOCIATE-Information.CMIPUserInfo;**
- **CMIP-A-ABORT-Information.CMIPAbortInfo.**

The corresponding ASN.1 object descriptor value shall be

“CMIP-PCI”.

This abstract syntax is defined to include all data types resolved by the ANY DEFINED BY X productions, in which X is of type OBJECT IDENTIFIER.

The ASN.1 object identifier and object descriptor values

{joint-iso-ccitt asn(1) basic-encoding(1)} and **“Basic Encoding of single ASN.1 type”**

(assigned to an object in Recommendation X.209 [4]) can be used as a transfer syntax name with this abstract syntax.

7.5.1 *Extensibility rules*

7.5.1.1 When processing incoming CMIP-A-ASSOCIATE-Information, the accepting CMIPM shall

- ignore all tagged values that are not defined in the abstract syntax of this Recommendation; and
- ignore all unknown bit name assignments within a BIT STRING.

7.5.1.2 The abstract syntax name may be used when the presentation data values are modified to include:

- new system management operations;
- new tagged elements within a SET or SEQUENCE;
- new bit name assignments within a BIT STRING;
- new named numbers for an INTEGER; and
- new named enumerations within an ENUMERATED.

8 **Conformance**

A system claiming to implement the procedures specified in this standard shall comply with the requirements in §§ 8.1 and 8.2.

8.1 *Static requirements*

The system shall

- a) support the kernel functional unit defined in Recommendation X.710 [12], and the facilities implied by that functional unit;
- b) support the transfer syntax derived from the encoding rules specified in Recommendation X.209 [4] and named

{joint-iso-ccitt asn1(1) basic-encoding(1)}

for the purpose of generating and interpreting CMISE protocol information as defined by the abstract syntax

“CMIP-PCI”

for the functional units supported:

- c) support the ACSE protocol defined in Recommendation X.227 [10], to establish and to release an association;
- d) support the rules specified in annex A in any application context that includes CMISE as one of the ASEs;
- e) support association class 3 of the ROSE protocol defined in Recommendation X.229 [11];
- f) support the multiple reply functional unit if the multiple object selection functional unit is supported.

8.2 *Dynamic requirements*

The system shall

- a) follow the procedures relevant to each functional unit that the system claims to implement;
- b) when used, verify the optional security parameters defined in the CMIP PDUs;
- c) when the extended service functional unit is supported, support the presentation protocol defined in Recommendation X.226 [9], as required by the application context;
- d) when scoping is provided, support the multiple reply functional unit.

ANNEX A

(This annex does not form an integral part of this Recommendation)

Association rules for CMISE

A.1 *ACSE, session and presentation requirements*

- A.1.1 CMISE requires the kernel presentation functional unit as defined in Recommendation X.216 [6].
- A.1.2 CMISE requires the kernel and full duplex session functional units as defined in Recommendation X.215 [5].
- A.1.3 CMISE requires the normal mode of ACSE and presentation services as defined in Recommendations X.227 [10] and X.216 [6].

A.2 *Association initialisation rules*

A.2.1 *Request*

The CMISE-service-user that initiates the association establishment shall provide the A-ASSOCIATE user information defined by Recommendation X.710 [12]. The CMIP user information shall be made available to the CMIPM which shall

- a) construct CMIPUserInfo from the information supplied;
- b) set the protocol version parameter within CMIPUserInfo by setting the bit corresponding to each version supported;
- c) include CMIPUserInfo as a separate EXTERNAL in the user information parameter of the A-ASSOCIATE request primitive;
- d) wait for the user information specific to CMIS to be returned in the A-ASSOCIATE confirm primitive.

A.2.2 *Indication*

On receipt of an A-ASSOCIATE indication primitive, the CMIPUserInfo parameter shall be made available to the CMIPM which shall

- a) check that at least one of the proposed protocol version can be supported;
- b) verify that the optional access control parameter is valid;
- c) if any of the checks fail, the association shall be rejected by setting the reason for failure parameter in the A-ASSOCIATE response primitive to “rejected by responder (permanent)”. The association is not established and that instance of the CMIPM shall cease to exist;
- d) if the above checks succeed, the following information, if present in CMIPUserInfo, shall be made available to the CMISE-service-user: functional units supported by the CMISE-service-provider, access control and user information. The CMIPM shall wait for the response from the CMISE-service-user.

A.2.3 *Response*

The A-ASSOCIATE response primitive indicating “accepted” or “rejected”, and which if accepted, includes the functional units, access control and user information parameters, shall be made available to the CMIPM which shall

- a) construct CMIPUserInfo required for the response. The CMIPUserInfo shall include the version parameter indicating all versions of CMIP that are supported;
- b) include CMIPUserInfo as a separate EXTERNAL in the user information parameter of the A-ASSOCIATE response primitive;
- c) if the association response indicates “accepted”, the protocol version agreed to is the version corresponding to the highest number supported by both CMIPMs. The CMIPM shall then be ready to accept CMISE indication primitives;
- d) if the association response indicates “rejected”, that instance of the CMIPM shall cease to exist.

A.2.4 *Confirmation*

On receipt of the A-ASSOCIATE confirmation primitive, the CMIPUserInfo parameter shall be made available to the CMIPM which shall

- a) if the association confirmation indicates success, the association is established and the functional units, access control and user information parameters, if present in the confirmation, are made available to the association-initiator. The functional units agreed to correspond to those for which both CMISE-service-users indicated support and the protocol version is the highest version number supported by both CMIPMs;
- b) if the association confirmation indicates failure, the association is not established and that instance of the CMIPM shall cease to exist.

A.3 *Association release rules*

Either CMISE-service-user may initiate an association release.

A.3.1 *Request*

On receipt of a request for association release, the necessary A-RELEASE parameters shall be made available to the CMIPM which shall cease to accept service requests and wait for the confirmation of the release of the association.

A.3.2 *Indication*

On receipt of an A-RELEASE indication primitive, the necessary A-RELEASE indication parameters shall be made available to the responding CMIPM which shall wait for the association release response.

A.3.3 *Response*

On receipt of an association release response from the responding CMISE-service-user, the necessary A-RELEASE response parameters shall be made available to the responding CMIPM. Thereafter, that instance of the CMIPM shall cease to exist.

A.3.4 *Confirmation*

On receipt of an A-RELEASE confirm primitive, the necessary A-RELEASE confirm parameters shall be made available to the initiating CMIPM. Thereafter, that instance of the CMIPM shall cease to exist.

A.4 *Association abort rules*

Either CMISE-service-user may initiate an abrupt termination of the association.

On the basis of local information, if the ability of the underlying services to convey unlimited user information by A-ABORT does not exist, the CMIPAbortInfo parameter may not be included in the A-ABORT service primitives.

A.4.1 *A-ABORT request*

On receipt of a request to abort the association, the necessary A-ABORT request parameters including the A-ABORT user information defined by Recommendation X.710 [12] shall be made available to the CMIPM which shall

- a) construct CMIPAbortInfo from the information supplied;
- b) set the abort source parameter within CMIPUserInfo to CMISE-service-user;
- c) include CMIPAbortInfo as a separate field in the user information parameter of the A-ABORT request primitive;
- d) thereafter, that instance of the CMIPM shall cease to exist.

A.4.2 *A-ABORT Indication*

On receipt of an A-ABORT indication primitive, the necessary A-ABORT indication parameters including CMIPAbortInfo shall be made available to the CMIPM. Thereafter, that instance of the CMIPM shall cease to exist.

A.4.3 *A-P-ABORT Indication*

On receipt of an A-P-ABORT indication primitive, the necessary A-P-ABORT indication parameters shall be made available to the CMIPM. Thereafter, that instance of the CMIPM shall cease to exist.

A.4.4 CMIP protocol error

On detecting a protocol error, the CMIPM shall

- a) construct CMIPAbortInfo with the abort source parameter set to CMISE-service-provider;
- b) indicate to the CMISE-service-user that a protocol error has occurred;
- c) include CMIPAbortInfo as a separate field in the user information parameter of the A-ABORT request primitive;
- d) thereafter, that instance of the CMIPM shall cease to exist.

ANNEX B

(This annex does not form an integral part of this Recommendation)

Expanded ASN.1 syntax

This annex describes how the OPERATION and ERROR macros of Recommendation X.219 [8] are expanded into ASN.1 data types and subtypes.

If any inconsistencies exist between these definitions and the definitions in § 7, then the definitions in § 7 take precedence.

-- Common Management Information Protocol (CMIP)
