SECRETARIAT: USA (ANSI)

TITLE: Security Services in Support of Routeing Protocols

SOURCE: Project Editor (C. A. Kunzinger, USA)

SUBJECT: Based on their discussions at the Berlin WG2 routeing sessions, experts request comments on the following questions:

1. Which security services are desirable for protection of the protocol-specific PDUs of a routeing protocol (such as the BISPDUs of the inter-domain routeing protocol, for example)?

2. Should such services be provided by the use of an appropriate Network layer security protocol operating in conjunction with the routeing protocol, or by explicit elements of procedure within the routeing protocols themselves?

STATUS: In accordance with JTC1/SC6 WG2 Berlin resolution 5.3, Member Bodies and Liaison Organizations are asked to submit their comments to the SC6 secretariat no later than 1992-04-01.
