### #43: Undocumented Feature of CalcMenuSize

Revised by: Matt Deatherage March  
1991  
Written by: Dan Oliver  
November 1988

This Technical Note documents that `CalcMenuSize` can accept a parameter of `$FFFF` to recalculate menus with uninitialized heights and widths.

**Changes since November 1988:** This Note is now obsolete.

---

This Note formerly described how `CalcMenuSize` behaves when menu widths and heights are stored as `$0000` or `$FFFF`. This behavior is now documented in Volume 3 of the *Apple IIGS Toolbox Reference* on page 37-3.
