

Preface

About this note

This developer note provides information on the hardware configuration of the Macintosh Classic[®] II computer and emphasizes those features that are new or different from those of other Apple Macintosh computers. It is assumed that hardware and software developers are already familiar with both the functionality and programming requirements of Macintosh computers. If you are unfamiliar with the Macintosh or would simply like more technical information on the hardware, you may want to obtain copies of related technical manuals. For information on how to obtain these manuals, see the following section.

For more information

To supplement the information in this document, you might wish to obtain related documentation such as the *Guide to the Macintosh Family Hardware*, second edition; *Designing Cards and Drivers for the Macintosh Family*, second edition (the third edition will be available soon); and *Inside Macintosh*, Volumes I through VI. Copies of these technical manuals are available through APDA (Apple Programmers and Developers Association). APDA offers convenient worldwide access to over three hundred development tools, resources, and training products and to information for anyone interested in developing applications on Apple platforms. Customers receive the quarterly *APDA Tools Catalog*, featuring the most current versions of Apple development tools and the most popular third-party development tools. Ordering is easy; there are no membership fees, and application forms are not required for most of our products. APDA offers convenient payment and shipping options, including site licensing.
