<FORMAT> "tag"
Tips

<FORMAT> "body"
Don't use your name as an identification code.

The longer your code is, the harder it will be to guess (it must be at least six characters).

Mix upper- and lowercase letters, and use numbers (for example, "4ME!Only%").

Make it easy to remember and don't write it down.

Keep track of which letters are uppercase — the identification code is case-sensitive.

<FORMAT> "full"
A digital signature is a way to mark (or "sign") a document so that other PowerTalk users can verify who signed the document, and that it has not changed since it was signed.

You use a Signer file to put your digital signature on files.

A Signer file must be approved in order to be valid. You use the DigiSign Utility program to start the approval process.
