

TECHNOTE: Inside Macintosh: QuickDraw GX Printing Extensions and Drivers Errata

By Ingrid Kelly
inge@apple.com
Apple Developer Technical Support (DTS)

This Technical Note discusses known errors and omissions in *Inside Macintosh: QuickDraw GX Printing Extensions and Drivers*.

Topics:

- Clarification of GXDoesPaperFitMessage Description, January 1996
- Correction to GXWriteStatusToDTPWindow Definition, January 1996
- Correction to Figure 6-33: 'pdip' resource, January 1996
- Correction to Index: GXGetJob Entry, January 1996

Chapter 4 - Printing Messages

Clarification of GXDoesPaperFit Message Description Page 4-61

The description of GXDoesPaperFit is incorrect. It should read:

QuickDraw GX sends the GXDoesPaperFit message to limit the number of paper-type names that appear in the Paper pop-up menu in the Input Trays and Paper Mismatch dialogs. It does NOT limit the number of paper-type names for the Page Setup dialog box. You can override the GXDoesPaperFit message to notify QuickDraw GX that a certain paper type does not work in the specified paper tray on your device.

Correction to Definition of GXWriteStatusToDTPWindow Page 4-163

The line reading:

```
OSErr MyWriteStatusToDTPWindow (gxStatusRecord aStatusRecord,  
                                gxDisplayRecord aDisplayRecord);
```

should be corrected to read:

```
OSErr MyWriteStatusToDTPWindow (gxStatusRecord *aStatusRecord,  
                                gxDisplayRecord *aDisplayRecord);
```

Chapter 6 - Printing Resources

Correction to Figure 6-33 Page 6-88, 'pdip' resource

Figure 6-33 shows the wrong value for the `Render options` field. It should be 4 bytes(long), not 2(short).

Index

Correction to GXGetJob function Entry Page IN-3

The index should reference pages 5-8 and 5-32 as the correct references.
