

JSaver v1.0
WWDC '97 Sample
© 1996 Apple Computer, Inc.

This screen saver uses the vast storage medium of the Internet to save your screen!

You should have a full time Internet connection to take advantage of this software.

Choose the Applet you wish to run from the "Choose URL..." button. There you can select an individual Applet from the list (some that we like are provided) and add your favorites.

Selecting the "Random" checkbox means the module will select a Random applet from the list at sleep time.
