#  
# Index Screen Definition  
#  
# The Index screen information for the Access window is defined in a hierarchical list.  
# Index terms are sorted in alphabetical order automatically on compile.  
# A second parameter following the index term of "FALSE" means the Index term does not  
# appear in the scrolling list, but allows synonyms to be mapped to it in from the look for window.  
#

<INDEX> "32-bit addressing"  
<HEADER> "Definitions"  
<TOPIC> "32-bit addressing" , "Definitions 32-bit addressing"  
<HEADER> "How do I"  
<TOPIC> "turn 32-bit addressing on or off?" , "How do I turn 32-bit addressing on or off?"
