News Release

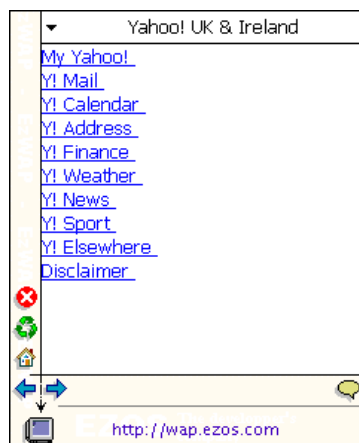

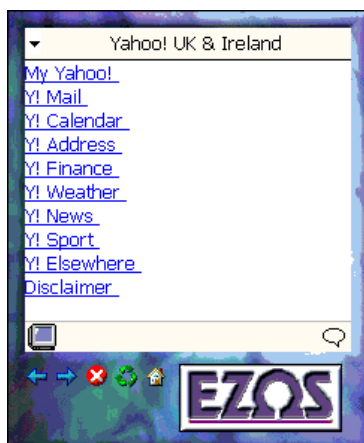

EZOS provides EzWAP, the first platform-independent WAP browser enabling a variety of computing systems to access the mobile Internet environment, including: mobile devices (Pocket PCs, PC companions), embedded systems and PCs running Microsoft Windows 95/98, Windows NT, Windows 2000 or Windows CE. Thanks to its modular design, EzWAP can be integrated into virtually any appliance, regardless of its operating system and with a minimum amount of software adaptation required.

June 20, 2000 - EZOS, a service provider active in the field of mobile business computing, is proud to announce the first platform-independent WAP browser: EzWAP.

EzWAP puts WAP services and mobile access to the Internet right in the palm of your hand. Devices running EzWAP can now explore WAP sites that are already part of the Internet. Simply install EzWAP on your device, connect to your Internet Service Provider (ISP) and browse WAP sites as easily as you currently browse HTML sites using a standard web browser.

This solution is particularly suited for devices with limited communication capabilities (i.e., small bandwidth) and small screen size, like Personal Digital Assistants (PDAs).

EzWAP's modular design makes it easy to integrate the software into any Internet appliance. The navigation engine is platform-independent. Only the communication and user-interface modules need to be customized on a per platform basis. The user can also customize the browser by changing the background image - known as the "skin".

Key features

- Powerful WAP browser providing all the functions required to access the mobile Internet
- 100% compatible with PC companions running Windows CE 2.00, 2.01, 2.11, Windows Powered Pocket PC, Windows 95/98, Windows NT or Windows 2000 (for the latest supported platforms, please check on the EZOS web site: <http://www.ezos.com>).
- Reads WML pages and executes WMLScript
- Full support for HTTP and WSP/WTP using a WAP gateway
- Fully WAP 1.2 compliant and backward compatible with WAP 1.1 and earlier
- Customizable skin, for a user-specific browser interface

- Portable solution: thanks to the platform-independent browser engine, users only need to change the communication and interface modules
- Small footprint: convenient size for small devices.

Pricing and availability

An evaluation version of EzWAP is available on the EZOS Web site for the following platforms: Microsoft Windows Powered Pocket PC, PC companions (P/PC, H/PC, H/PC Pro) running Windows CE 2.00, 2.01 and 2.11, PCs running Windows 95/98, Windows NT or Windows 2000 operating systems. EzWAP's basic retail price is \$25 US. Details on large volume pricing may be obtained by contacting info@ezos.com.

Integrating WAP in embedded systems

The EZOS **WAP engine** is the solution for manufacturers of WAP-enabled appliances, who wish to quickly integrate the WAP technology into their platform. The WAP engine is platform-independent (written in ANSI C++). This makes it easy to integrate WAP compliant software into your product without the need to build everything from scratch.

For Windows CE-based embedded systems, EZOS provides the **WAPAK**, its **WAP Adaptation Kit for CE Embedded platforms**. Using this ready-to-go WAP resource kit, programmers are able to start development right away.

About EZOS

EZOS is a service provider active in the field of **mobile and e-business** providing companies with development, training and consulting services. EZOS specializes in the development and integration of **mobile Internet and Internet business solutions** into core back-office systems.

EZOS provides comprehensive services to help companies build and implement mobile Internet and Internet solutions that really meet their business needs.

EZOS can offer help in the following areas:

- Design and implementation of WAP and Web sites
- Sites security
- Development of business objects for data access management
- Integration of sites into core back-office systems
- Advice in choosing and implementing hardware and software platforms (servers, WAP gateways, etc.)

EZOS has built its expertise from years of experience: in back-office infrastructures since 1992, in Internet development since 1996 and in WAP and mobile computing since as early as 1998.

Today EZOS brings its expertise to mobile Internet and Internet project development and implementation, in collaboration with graphic designers.

This unique combination of competence and experience means that m-business and e-business solutions are built on solid technical foundations.
