# Copyist 4.0
for Microsoft® Windows

Copyist is the music notation tool that lets you create with ease those tricky musical examples that more expensive and complicated programs trip over their feet trying to reproduce.

Copyist works with your existing QuickScore files, giving you the power to fine-tune any score created in QuickScore Deluxe, Professional or Elite simply by saving your work as a Copyist file and loading it into Copyist.

Because Copyist treats notes, staves, clefs and other musical characters as *graphical* elements, you've got the freedom to put musical objects on the page regardless of musical rules. This freedom allows you to easily create small excerpts to be included in work that is predominantly text, as well as very complex scores which are difficult to create using software which must follow musical rules.

Copyist lets you save your scores as .BMP, TIFF or .EPS files so that you can incorporate them into your Microsoft Word, Corel WordPerfect, Corel Draw, Adobe Illustrator, Adobe PageMaker and many other types of documents with a few mouse clicks.

Here are some examples of the things Copyist lets you do quickly and easily. All of these examples were created in Copyist and then imported into Microsoft Word to produce this brochure. Try producing these examples with any other notation software!

The principal motive of the theme undergoes extreme variation of intervallic structure - variation in which its identity is clearly preserved:

becomes:

Copyist for Windows is just $69.95.QuickScore Elite 5.1 and Copyist for Windows can be purchased together for the special price of $119.95. QuickScore Elite Level II and Copyist for Windows can be purchased together for the special price of $219.95.

Find Copyist for Windows at your local music software retailer or for more information give us a call toll-free at **1-888-222-2454**.
