## 1.7 121.guide/Economy (Japan)

### Economy (Japan)

=====

#### Overview:

Government-industry cooperation, a strong work ethic, and a comparatively small defense allocation have helped Japan advance with extraordinary rapidity, notably in high-technology fields. Industry, the most important sector of the economy, is heavily dependent on imported raw materials and fuels. Self-sufficient in rice, Japan must import about 50% of its requirements of other grain and fodder crops. Japan maintains one of the world's largest fishing fleets and accounts for nearly 15% of the global catch. Overall economic growth has been spectacular: a 10% average in the 1960s, a 5% average in the 1970s and 1980s. Economic growth slowed markedly in 1992 largely because of contractionary domestic policies intended to wring speculative excesses from the stock and real estate markets. At the same time, the stronger yen and slower global growth are containing export growth. Unemployment and inflation remain low at 2%. Japan continues to run a huge trade surplus - \$107 billion in 1992, up nearly 40% from the year earlier - which supports extensive investment in foreign assets. The crowding of its habitable land area and the aging of its population are two major long-run problems.

#### National product:
