## 1.7 74.guide/Economy (Estonia)

### Economy (Estonia)

=====

#### Overview:

As of June 1993 Estonia ranks first among the 15 former Soviet republics in moving from its obsolete command economy to a modern market economy. Yet serious problems remain. In contrast to the estimated 30% drop in output in 1992, GDP should grow by a small percent in 1993. Of key importance has been the introduction of the kroon in August 1993 and the subsequent reductions in inflation to 1%-2% per month. Starting in July 1991, under a new law on private ownership, small enterprises, such as retail shops and restaurants, were sold to private owners. The auctioning of large-scale enterprises is progressing with the proceeds being held in escrow until the prior ownership (that is, Estonian or the Commonwealth of Independent States) can be established. Estonia ranks first in per capita consumption among the former Soviet republics. Agriculture is well developed, especially meat production and provides a surplus for export. Only about one-fifth of the work force is in agriculture. The major share of the work force engages in manufacturing both capital and consumer goods based on raw materials and intermediate products from the other former Soviet republics. These manufactures are of high quality by ex-Soviet standards and are exported to the other republics.

Estonia's mineral resources are limited to major deposits of shale oil (60% of the old Soviet total) and phosphorites (400 million tons). Estonia has a large, relatively modern port and produces more than half of its own energy needs at highly polluting shale oil power plants. It has advantages in the transition, not having suffered so long under the Soviet yoke and having better chances of developing profitable ties to the Nordic and West European countries. Like Latvia, but unlike Lithuania, the large portion of ethnic Russians (30%) in the population poses still another difficulty in the transition to an independent market economy.
