METHOD TYPES

- Finding files
- whereAmI
 - whereIs:path:
 - whoAmI

INSTANCE METHODS

whereAmI

-(NXAtom)whereAmI

Attempts to find the directory which the program's executable resides in. Returns a fully qualified pathname if successful. Returns NULL if unable to find the executable's directory.

whereIs:path:

-(const char *)whereIs:(const char *)file path:(char *)result

Attempts to find the a file within the executable's directory. If a path to the file cannot be generated, NULL is returned and *result* is set to "". If a path to the file can be generated, but the file cannot be found, NULL is returned and *result* is

set to the path to the file. Lastly, if the path can be generated, and the file exists, *result* is returned filled with that path.

whoAmI

-(NXAtom)**whoAmI**

Attempts to find the path to the program's executable. Returns a fully qualified pathname if successful. Returns NULL if unable to find the executable.
