String

Inherits From: Object

Declared In: String.h

Class Description

The String class is provided only to enable browsers of String objects for TTools. The actual functionality contained within this String class has purposely been kept to a bare minimum. Those methods that are implemented are so obvious I'm not even going to document them.

Instance Variables

char * **buffer**;

buffer

The character array in which the actual string is kept.

Method Types

- Initializing and freeing the String
 - init
 - free
- Interacting with the String
 - setStringValue:
 - stringValue
- Archiving
 - read:
 - write:
