Internet Archive Servers

Q: How do I put NeXT software on the Internet archive servers?

A: NeXT Technical Support generally places software on these three archive servers:

Purdue

Machine: sonata.cc.purdue.edu   128.210.15.30
                        nova.cc.purdue.edu   128.210.7.22
Directory: pub/next
Contact: <archive-management@cc.purdue.edu>

To submit: send mail to archive-server@cc.purdue.edu with the subject of 'submission'. NeXT
Mail attachments are encouraged.   (Otherwise, send tar'd, compressed, and uuencoded files.)   If

your program is too large to mail, or if you have other questions related to using the archive server, send a message to archive-server@cc.purdue.edu.

Oregon State

Machine: cs.orst.edu   128.193.32.1
Directory: pub/next
Contact: <next-ftp@cs.orst.edu>

To submit: Large files: tar and compress, and ftp directly to the directory called "submissions". Small files: ftp as above or mail to next-ftp@cs.orst.edu.   Don't send NeXT Mail attachments.

U of Maryland

Machine: umd5.umd.edu 128.8.10.5
Directory: NeXT
Contact: Mark Feldman <feldman@umd5.UMD.EDU>

To submit: send mail to feldman@umd5.UMD.EDU describing the submission, and he will discuss with you the format to use for sending the submission. He prefers mail without NeXT Mail attachments.

See the man pages for **tar**, **compress** and **uuencode** as necessary. Some sites prefer you to tar the files such that untar'ing them will create a directory. That is, instead of cd'ing to the target directory and doing a

tar cvf destinationfile .

cd to the parent directory and

tar cvf destinationfile sourcedirectory

For instructions on ftp'ing to the sites, read the NextAnswers file "Where to get public domain software"   and the **ftp** man page.

NOTE: Send nothing (including images and sounds) that's copyrighted by other parties.
