

Q: I have put together a DBKit program with InterfaceBuilder and it uses DBModule to make connections between UI Objects and Record List. The DBModule is the textDelegate for the instance TextFields. I type some characters into a TextField, and, without pressing Return or Tab, I clicked the Save button (or chose the Save menu command). I subsequently discovered that the data in the very last TextField was not saved. Why?

A: The problem is that **textWillEnd:endChar:** is not invoked when you click a button or choose a menu command without pressing Return, Tab or back Tab first. You need the following code to get the lastly-edited value in the action method of the Button or Menu item.

```
- save: sender
{
    id      association = [dbModule editingAssociation];
    id      fetchGroup = [association fetchGroup];
    [fetchGroup takeValueFromAssociation: association];
    ...
    ...
}
```
