

Q: The Release 3 NEXTSTEP user environment does not seem to include the complete collection of PPD (PostScript Printer Description) files (in /NextLibrary/PrinterTypes/English.lproj), how can I get a copy of the ones that I need if they aren't on the base release?

A: It depends upon which version of Release 3 you have.

### **Release 3.0**

Every NEXTSTEP system and upgrade comes with one CD-ROM disk containing the entire release. This makes it easy for users with the base software configuration to copy files that are included in the Release 3 extensions from the CD-ROM onto their system if needed (from /NextLibrary/PrinterTypes/English.lproj). Such is the case with any PPD files that aren't on the base configuration. Also, installing the Documentation package (/NeXTSTEP\_3.0/NextCD/Packages/Documentation.pkg) gives you the full suite of PPD files.

### **Release 3.1**

To install all PPD files in this release, simply install the following package:

/NEXTSTEP\_3.1/NextCD/Packages/Documentation.pkg

## **Release 3.2**

PPD files in Release 3.2 are found in:

`/NEXTSTEP_3.2/NextCD/Packages/PrinterPPDs.pkg`

and in:

`/NEXTSTEP_3.2/NextCD/Packages/ImagesetterPPDs.pkg.`
