Q: I am saving the start-up defaults for my application in the defaults database using   the NXReadDefault() and NXWriteDefault() routines.   Is there a limit on the number of bytes that I can put here with a single write?

A: There was a bug in Release 1.0 which caused a segmentation error when reading back any default which exceeded 69 bytes.   This bug was fixed in Release 2.0.   However the limit is fixed at 1024 bytes.   In Release 3.1 the limit is fixed at 8192 bytes.
