Q: How do I get a handle on the submenu of the current menu item?   I read the documentation, and there appears to be no way to access the submenu to be called from a given menu item.   It's easy to find out that the item *has* a submenu, but appears impossible to find out what object that submenu actually *is*.

A: If [aMenuCell hasSubmenu] is true, [aMenuCell target] is the id of the submenu.
