Well, here's the first major release of this little custom object palette.

This product is CVWare. (You'll see why later).

This one does one thing and one thing only. It dumps menu cells to tiffs. It is advised that you use Grab.app for dumping entire Menus.

For example.

Given a menu like the following.

paste.tiff ¬

The Palette will produce the following TIFF files which you can use when writing NeXTSTEP help files.

UNTITLEDM.tiff ¬ UNTITLEDM.tiff
Info...E.tiff ¬ Info...E.tiff
Info...D.tiff ¬ Info...D.tiff

Info...H.tiff ¬ Info...H.tiff

Etc..... for the entire menu heirarchy.

The way this is activated is thru a target/action method in IB. Simply connect a control up to the dumpMenus: action method. Should you connect from a MenuCell the palette will _not_ dump that MenuCell. Nor will it dump menu cells with empty titles.

This is a FAT Intel/Motorolla palette.

Further suggestions to robert@steffi.demon.co.uk

I am available for NeXTSTEP work. Should you know of any vacancies please feel free to forward my CV along.

businesscv.rtf ¬

Should you make some use of this object a note of appreciation would do wonders for my morale :-)

Special thanks to jeffa@wri.com and wjabi@libra.arch.umich.edu for the excellent icons. (Death to the sphere!!)
