

Figure 1.1	The layers of NeXTSTEP	1
Figure 2.1	In procedural programming, the functions are kept separate from the data they operate on	8
Figure 2.2	An object is a collection of data (instance variables) along with the functions (methods) that can access the data	9
Figure 2.3	Accessing an instance variable through one of the methods	9
Figure 2.4	Once a class is defined, it can be used to create instances	11
Figure 2.5	A subclass inherits the methods and instance variables defined in the superclass	14
Figure 2.6	A message expression has two parts	18
Figure 2.7	Polymorphism allows identically named methods in more than one class	19
Figure 2.8	The higher classes are more generalized than the lower classes	21
Figure 2.9	The interface file declares the instance variables and methods which the class contains	31
Figure 2.10	The implementation file contains the code for the methods defined in the class' interface file	34
Figure 2.11	The class object has two message dispatch tables that contain the addresses of the instance and class methods	37
Figure 2.12	Objective-C searches for the appropriate method in the dispatch table	39
Figure 2.13	Dynamic binding defers associating the receiver to the method until runtime	40
Figure 2.14	self is the current object and super is the superclass	43
Figure 2.15	Objective-C starts at the Object class to allocate the memory for a newly created instance	45
Figure 2.16	The contents of theWindow and name are completely external to theDocument	48
Figure 2.17	An object should free the memory block an instance variable is pointing to before freeing the instance variable	50
Figure 3.1	Object-oriented design is composed of activities rather than steps	55
Figure 3.2	AbstractShape has no collaborators	64
Figure 3.3	The Rectangle class has no collaborators	65
Figure 3.4	The Square class has no collaborators	65
Figure 3.5	The List class has no collaborators	66
Figure 3.6	In a message diagram, the classes are depicted as boxes, and the lines and their directions depict the messages	69
Figure 3.7	The Object class is always the root class of an Objective-C application	70
