

Welcome to Advanced Effect Maker!

Please uninstall any version of the Advanced Effect Maker before installing this software.

Make sure you install the Java Runtime Environment 1.4 after or before this installation. The software will NOT work without it.

Please download the JRE 1.4 from the following site:

<http://www.java.com/> (Where it says "Download Java Software".)

If you have Java SDK 1.4 that will also work. Those of you that have Java 1.3 or earlier, have to upgrade to version 1.4 for the software to work.

Important Note! Although the authoring environment needs Java 1.4, the effects generated by this software does NOT require Java, since they use Macromedia Flash or JavaScript technology! You should use Internet Explorer or Netscape with the Flash Player 5 (or later) plugin installed. Make sure you have enabled JavaScript and Active-X objects on your browser. The default installation will always have this enabled.
