

Activity Summary

Use the Activity Summary online report for at-a-glance information about the Internet activity of your users. You can customize the violation information that appears by choosing user accounts and categories and you can have the report emailed to you.

The information can help you identify trends in how different users interact with the Internet and it can help you know the current status of Net Nanny.

Option	Description
From date	The system calculates the date as the date of the last deletion of the Activity Summary by the administrator.
To date	This date is from the Net Nanny internal clock that synchronizes with the atomic clock. It does not necessarily match the PC clock.
Current size of logs	The system calculates the size of the log files in the Net Nanny directory.
Available disk space	The amount of space on the drive where Net Nanny is installed that is currently free. This value is retrieved from the operating system and displayed by Net Nanny. Net Nanny does not calculate the value.
Space remaining	Net Nanny subtracting the current size of the logs from the available disk space calculates the value.
Email	The values for this box are 'Enabled' or 'Disabled.' This box indicates whether the administrator has set up and configured email.
Most recent list update	The date of the last list update.
Date & time tampering	The values that display in the box are either 'None' or 'Detected.' The value 'Detected' displays when the system determines there is more than a 2-hour variance between the Net Nanny internal clock and the PC clock.
User sessions grid	This grid displays the number of user sessions (as calculated by a session start and a session stop) for each user and is grouped by date.
Violations grid	The grid displays the number of violations since the last deletion date for the individual categories and by user.

User Account Summary

Use the User Account Summary to see at a glance, the settings of all users. If you want to change a user's settings, you can select that user account and click Edit User.

Option	Description
Name	The name of the user account.
Web Sites (Permitted or Restricted lists)	Indicates which list in the database is applied to the user's account.
File Trade (File Trading applications)	Indicates if these applications are blocked.
Inst Msg (Instant Messengers)	Indicates if these applications are blocked.
Games	Indicates if these applications are blocked.
IRC Chat	Indicates if these applications are blocked.
Nwsggrp (Newsgroups)	Indicates if these applications are blocked.
Filtering (Keyword content filtering)	Indicates if content filtering is enabled or disabled.
Time Lmt (Time Limits)	Indicates if time limits are enabled or disabled.

Activity Details

Use the Activity Details report to locate specific information about one or more user's Internet activity. You can also review Web sites a user has visited, add a Web site to your lists of restricted or permitted Web sites, and also submit a Web site for inclusion in the Net Nanny database of restricted and permitted Web sites.

<u>Option</u>	<u>Description</u>
No.	The number of the log entry. Each entry has a unique number assigned by Net Nanny.
Date	The month, day, and year the activity was logged.
Time	The time the activity was logged.
User	The user account that was active when the activity was logged.
Violation	The type of violation.
Pattern	The URL or keyword pattern that triggered a violation.
URL	The URL where the violation occurred, or if there was no violation, the URL visited.

Edit a user

When you edit a user account, you can choose to change the password or to monitor that person in 'stealth mode.' If you decide to monitor a specific user's activity without their knowing about it, you must fully set up a user account with permissions and restrictions first and then choose the option on the Edit User tab to monitor only. In this way, Net Nanny can track that person's activities, both good and bad, on the Activity Summary report and the Activity Details report.

Web site blocking level

There are four blocking levels from which to choose.

Option	Description
Level 4	Block all Web sites.
Level 3	Block all web sites EXCEPT those on the list(s) of PERMITTED web sites. This level is recommended for children, young teens, and anyone who wants to avoid 'surprises' when browsing the Web.
Level 2	Permit all web sites EXCEPT those on the list(s) of RESTRICTED web sites. This level is recommended for older teens and adults. Important: Not all objectionable content is blocked at this setting.
Level 1	Permit all web sites.

Blocking Options

In addition to blocking Web sites, you can choose additional types of filtering and blocking for each user account. Not all of the following are available at the same time.

<u>Option</u>	<u>Description</u>
Net Nanny list (Restricted)	<p>When selected, the user cannot access any of the Web sites on this list.</p> <p>To view the list, click the Web Sites shortcut button.</p>
My list (Restricted)	<p>When selected, the user cannot access any of the Web sites on this list.</p> <p>To view the list, click the Web Sites shortcut button.</p>
Net Nanny list (Permitted)	<p>When selected, the user can access all Web sites on this list.</p> <p>To view the list, click the Web Sites shortcut button.</p>
My list (Permitted)	<p>When selected, the user can access all Web sites on this list.</p> <p>To view the list, click the Web Sites shortcut button.</p>
Block cookies	<p>When selected, all cookies are blocked.</p>
Block all Web graphics	<p>When selected, all graphics are blocked, both 'good' and 'bad.'</p>
Activate specified rating system	<p>When selected, another layer of Web site filtering is enabled (either ICRA or SafeSurf).</p>
Block pop-up/pop-under windows	<p>When selected, only one browser window may be open at a time.</p>
Shut down Web browser	<p>When selected, the browser shuts down if the user goes out-of-bounds.</p>

Applications

You can restrict a user's access to areas and applications

Option	Description
Block File Trading	When selected, those applications on the Net Nanny list are blocked for this user.
Block Instant Messaging	When selected, those applications on the Net Nanny list are blocked for this user.
Block Games	When selected, those applications on the Net Nanny list are blocked for this user.
Permit My List (IRC Chat)	<p>When selected, this user can access only the IRC Chat rooms on the list.</p> <p>To view the list, click the IRC Chat Rooms shortcut button.</p>
Block all Chat (IRC Chat)	When selected, this user is blocked from accessing any IRC Chat room.
Permit all IRC Chat	When selected, this user can access all IRC Chat rooms.
Permit My List (Newsgroups)	<p>When selected, this user can access only the newsgroups on the list.</p> <p>To view the list, click the Newsgroups shortcut button.</p>
Block all newsgroups	When selected, this user is blocked from accessing any newsgroup.
Permit all newsgroups	When selected, this user can access all newsgroups.
Block all (Permitted Applications)	<p>When selected, this user is blocked from accessing applications on the permitted applications list.</p> <p>To view the list, click the Permitted Applications shortcut button.</p>
Permit all (Permitted Applications)	When selected, this user can access all applications on the permitted applications list.

Time Limits

You can set a daily time limit for a user, for example 2 hours per day. You can set blackout periods during which time the user cannot access the Internet.

You can use the daily time limit in combination with the black out periods (User can access the Internet anytime after dinner until bedtime (6pm to 10pm), but only for 2 hours).

How do I log on or off?

The Net Nanny 5 Logon window is used to both log on to Net Nanny and log off. The window can be accessed from the Start menu or the system tray menu.

To log on

1. Access the logon window.
2. Choose your name from the list of users.
3. Click Log on.

To log off

1. Access the logon window.
2. Click Log off.

How do I use the session timer?

The Internet session timer counts down the time for a user whose user account is set with a daily time limit, for example, 2 hours. The session timer only displays when a user who has time limits logs on to Net Nanny.

When you are ready to use the Internet, click the Start button and the timer starts counting down the time. If you need to step away for any reason from the computer, you can temporarily stop the timer by clicking the Stop button.
