Installing/Uninstalling PictureProject

Installing PictureProject

Before installing PictureProject:

- Confirm that the computer satisfies the **system require-ments** for PictureProject.
- Log on to an account with administrator privileges (**Windows XP**, **Windows 2000 Professional**, and **Mac OS X** only).
- Exit all other applications (including anti-virus software).

Follow the links below to view installation instructions for your camera and operating system:

Digital SLR cameras	**Windows**	**Macintosh**
COOLPIX-Series cameras	**Windows**	**Macintosh**

Uninstalling PictureProject

Follow the links below for information on uninstalling PictureProject:

Digital SLR cameras	**Windows**	**Macintosh**
COOLPIX-Series cameras	**Windows**	**Macintosh**

✎ Existing Versions of PictureProject

If an existing copy of PictureProject is detected during installation, a version dialog will be displayed. Follow the on-screen instructions.

✎ The Nikon NEF Plug-in

The Nikon NEF plug-in is automatically installed with PictureProject. This plug-in can be used with Adobe Photoshop 7.0 or later (Macintosh) or Adobe Photoshop 6.0 or later and Adobe Photoshop Elements 2.0 or later (Windows) to open RAW pictures created with Nikon digital cameras. When opened in these applications, RAW images will have a bit depth of eight bits. RAW pictures modified in Capture NX can not be opened using the Nikon NEF plug-in.
