POWER NOTEBOOKS

**1** Hi-Grade Ultinote M6400-1800-I

Back at number one is the Hi-Grade Ultinote M6400-1800-I, which uses its 1.8GHz Pentium 4 processor to great effect. Due to a clerical error this model was removed by mistake last month. The processor is twinned with 512MB of RAM and a 16MB DDR (double data rate) RAM ATI Mobility M6 graphics chip, it pulled in a WorldBench 4 score of 118. That beats the Compaq Evo N600c by 15 points and, at just £9 over our starting cost of £1,500, it makes the Ultinote a worthy winner.

As with all notebooks using a desktop processor, battery life is not this model's strength – Hi-Grade claims a life of just 1.5 hours. However, if you are happy to use the Ultinote as a desktop replacement PC, this won't be a problem. It comes with a 40GB hard drive and a combo DVD/CD-RW drive, offering eight-speed DVD and 24-/eight-/quad-speed (read/write/rewrite) CD-RW facilities. It also features a 14.1in screen capable of a maximum resolution of 1,024x768. Unfortunately software is pretty limited – Office XP SBE is as much as you get.

**2** Dell Inspiron 8200

Dell awed us with the quality of its Inspiron range of notebooks, which is why its 8200 model gets a Recommended award. The Dell's clunkiness is reminiscent of IBM's ThinkPad, but it operates on a level that is way beyond aesthetics. Its 256MB of RAM is combined with a 40GB hard drive and Speedstep-enhanced Mobile Pentium 4 processor running at 1.7GHz. This specification achieved a WorldBench score of 109 which, although powerful, isn't far ahead of the competition. However, thanks to the new 845MP chipset, the Inspiron has been designed to perform better in multimedia content creation, and as an entertainment system the 8200 is second to none.

The crisp 15in screen has a resolution of 1,600x1,200dpi (dots per inch) and, complemented by nVidia's 64MB GeForce4 440 Go chip, will bring games alive with its crisp delivery. The Inspiron 8200 manages to be a decent business performer and entertainment system in one, while defying the standard specifications of both. It is expensive, but buying a top-notch machine so often is.

BUDGET NOTEBOOKS

**1** Mesh Pegasus 14.1 Pro

The Pegasus 14.1 Pro may have been toppled from the top spot by Sony, but it is no slouch, offering a well-considered package at a great price. Although the Pegasus couldn't match the performance of its competitors and lacks a CD-RW drive, it has many redeeming features. The plain metallic design isn't a head-turner, but it's a sturdy model with plenty of beauty on the inside. At the heart of the Pegasus is AMD's Mobile Athlon 4 chip, running at a speed of 1.2GHz, which is twinned with 384MB of SDRAM. As the WorldBench 4 score of 82 demonstrates, there's little difference in performance between Intel's and AMD's processors. A 20GB hard drive is standard and there are enough ports to make it a decent desktop replacement, although we'd like to see FireWire. The rest of the specification is fairly standard – a DVD drive, user-definable graphics memory and a 14.1in screen.

**2** AJP 7321

The AJP 7321 is similar in looks and setup to the Mesh but it can't match the warranty, software bundle or price. That said, the AJP is good value for money and a powerful performer. An ample 384MB of SDRAM is combined with an AMD Mobile Athlon 4 processor and 20GB hard drive. At 1.1GHz, the clock speed is 100MHz slower than most of the competition, but it still managed to rack up a respectable WorldBench 4 score of 85, which has beaten all comers in the Budget chart until this month's new entry from NEC appeared. One bonus for the AJP is the inclusion of a combination drive – the eight-speed DVD player also doubles up as a CD-RW drive, which is a sensible choice as there's rarely room on a notebook for two drives unless one is external, which is completely self-defeating when it comes to mobility. This also means that it offers very decent backup capabilities.

## POWER NOTEBOOKS

### 3 Rock Xeno

The Xeno is an impressive powerhouse of a notebook, packing a 2GHz Pentium 4 processor and 512MB of RAM, which helped pull in a WorldBench 4 score of 99. This isn't the highest score in the chart, but because the Xeno doesn't use a dearer mobile processor, the price is kept low. Bear in mind, though, that the desktop chip means battery life will suffer.

The Rock comes with 30GB of hard drive storage and a combined DVD/CD-RW drive. Graphics are provided by an ATI Mobility M6 card with 16MB of DDR (double data rate) RAM, so they are superior to the onboard graphics still found on the Agenda Si. Software is thin on the ground, but it is protected by a two-year collect-and-return warranty.

### 4 Compaq Evo N600c

Despite a 1.06GHz Intel Mobile Pentium III lying beneath its slim exterior, the Evo's WorldBench 4 score of 103 managed to beat the 1.2GHz Rock Agenda Si. Though the N600c weighs a mere 2.7kg, there's clearly no shortage of power beneath the bonnet.

The Radeon Mobility card will maximise frame rates, so it won't falter on 3D graphics. The N600c's 14.1in screen may not be huge, but its colour scheme and character definition are amongst the best we have seen in this category. Storage and drives aren't that generous: the hard drive is a mere 20GB and, although DVD playback is provided, CD-RW and floppy drives are absent, so you will have to add this on if you need to backup to CD.

### 5 Samsung Q10TXC 866

Samsung's Q10TXC 866 may not rival its competitors for speed, but it has plenty of redeeming features. In terms of specification it uses a low-voltage Mobile Pentium III processor, running at 866MHz. This is twinned with 256MB of RAM, an 8MB integrated Intel 830 graphics chip and 30GB hard drive. This line-up meant the Samsung turned in a WorldBench 4 rating of 87. This score is more suited to a Budget notebook, so if you're looking for top performance at the lowest price, this isn't really the machine for you.

## BUDGET NOTEBOOKS

### 3 NEC Versa Premium P1200

NEC has budget conscious customers in mind with the Versa Premium series, although the model we reviewed is the top of the range. However, by choosing the high-end P1200, you do get a combo DVD/CD-RW drive and the fastest processor on offer: a 1.2GHz Pentium III. This is backed up by 128MB of fast SDRAM, which helped the system to turn in a creditable WorldBench score of 89. Wrap all this up in an attractive silver case, throw in a 14.1in screen and a 20GB hard drive, and you have yourself a decent budget notebook. While it may not make it to the top of our chart it offers solid performance and the security of a coming from a reputable brand.

### 4 HP Pavilion zt 1121s

HP is targeting the home and student market with its Pavilion zt 1121s. It doesn't run to a floppy drive, but HP does offer you a discount on an external USB unit. The notebook has an attractive grey and silver finish and some funky purple lights around the touch pad. Performance from the 1.06GHz Mobile Celeron processor twinned with 128MB RAM, 20GB hard drive and S3 Savage graphics card is not the best by any means – it could only go as far as a WorldBench score of 68. However, what prevents this low score from taking the HP out of the chart altogether is its equally low price. You can get more for your money if you shop around, but not from a brand with such a good record for quality.

### 5 Hi-Grade Notino 2200

It is perhaps a bit unfair that the Notino 2200 should be stuck down at number five, because it is actually an exceedingly good deal. This slim and light subnotebook gives you the ultimate combination of portability on a budget. However, to keep the Hi-Grade's weight down compromises have had to be made, such as the use of an external floppy drive and the inclusion of only a sparse smattering of ports – all you get is VGA-out and three USB sockets. However, despite its small size the Notino is still pretty powerful – its 320MB of RAM and 1GHz Mobile Pentium III combine to achieve a WorldBench 4 score of 82.
