### 1 Best Price Poweroid.com 2013

We haven't seen a Poweroid PC in the chart for a while, but the wait has clearly paid off. The Best Price system offers a decent combination of performance, specifications and value for money, which is why the 2013 nabs the Best Buy award again this month. With a good-quality LG monitor, Logitech wireless peripherals and blue case, the Poweroid is an attractive system. The case also contains an extra fan to dissipate the heat generated by the powerful components.

Most of the high flyers this month share the same basic specification and the 2013 was no exception. Its Athlon XP 2100+ processor, running at 1.73GHz,

was complemented by 512MB of DDR (double data rate) RAM, which resulted in a mid-range WorldBench 4 score of 123. Rather than one 120GB hard drive, Best Price has opted for two 60GB Maxtor drives in a Raid 0 configuration, which offers speedier data delivery.

A top-of-the-range 128MB GeForce4 Ti 4600 graphics card is used in conjunction with LG's excellent 19in Flatron monitor, and the resulting frame rates are blisteringly fast. The Poweroid achieved a smooth and seamless 80fps (frames per second) at a resolution of 1,600x1,200. Creative's Audigy sound card and Inspire speakers ensure that audio quality is impressive – great news for anyone interested in making music on their PC. There's a generous 12 USB ports on the Best Price (including four with USB 2.0 support), while the two FireWire ports make up for the slow CD-RW speeds and lack of documentation.

← After entering the chart at number one last month, the Poweroid.com 2013 easily hangs on to its top spot

↑ The value-for-money Vision Titan offers plenty of storage due to its two 80GB hard drives

### 2 Multivision Vision Titan

The second-placed Multivision offers a good specification and value for money. Those looking for a well-protected investment will also be pleased to hear that the Vision Titan comes with a three-year onsite warranty – one of the best offers in the chart.

Again, we see an Athlon XP 2100+ chip combined with 512MB of DDR (double data rate) RAM, which means you won't be wanting for performance on this system. Another addition is the KT333 chipset

from Via, which provides a much improved memory controller. Bearing this in mind, the Titan's WorldBench 4 score of 120 should strictly speaking have been faster, however it's still reasonable. As with the Poweroid, the Titan houses two hard drives in a Raid 0 configuration for speed. Multivision has packed in two massive 80GB IBM hard disks – perfect for video editing and digital photography.

It's hard to fault the Titan's visual setup. LG's Flatron 915 Plus monitor, with a 0.24mm dot pitch and a top resolution of 1,600x1,200 at 85Hz, produces a clear sharp picture. Naturally, it helps that the graphics are powered by the ubiquitous GeForce4 Ti 4600 card. The Audigy sound card is another good addition, although the Videologic speakers don't have the power of Creative's Inspire 5300.

### 3 Evesham Axis 2100+

Evesham's Recommended winner lost out to the Vision Titan due to its higher cost, however it's still a great PC with an impressive hardware lineup. With an Athlon XP 2100+ processor and 512MB of DDR (double data rate)

RAM the Axis' specification follows the top two machines, but its WorldBench 4 score of 119 couldn't match those of the Poweroid and Vision Titan. This may be due to Evesham's 120GB hard drive – it's not Raid-configured, so even at 7,200rpm (revolutions per minute) it's slower. With a free upgrade to the 2200+ processor, which Evesham is offering for a limited time, this score should improve.

The Evesham's visual setup is impressive thanks to the LG Flatron 915 Plus monitor and nVidia's GeForce4 Ti 4600 card. It couldn't equal the frame rates the Poweroid offered, but it came a close second. With the excellent Audigy sound card and powerful Inspire 5300 speakers from Creative, the audio specification is the best on the market.

There's plenty of room to upgrade and there's no fewer than 10 USB ports on offer. If you own Creative's Jukebox 3.0, you can also use the FireWire port to upload MP3s and burn them on to disc using the 48-/40-/12-speed (read/write/rewrite) CD-RW drive. The package is wrapped up with comprehensive documentation and Works Suite 2002.

↑ The Evesham Axis 2100+ fails to sit at the top of the chart due to its slightly higher price tag

### 4 Carrera SSC Octan 2100r

Entering the chart last month at number four, Carrera's comeback machine hangs on to its deserved Recommended award due to the Octan being packed with plenty of features and high-end specifications. The 2100r may not be the speediest PC in the chart, but it's an accomplished fourth-placed machine with a decent price tag.

Carrera's WorldBench score of 110 doesn't reflect the inclusion of an Athlon XP 2100+ processor, 512MB of DDR (double data rate) RAM and two generous

POWER PCs

↑ You'll need plenty of free desk space to house the two 17in NEC monitors bundled with the Octan 2100r

80GB hard drives. There are also other redeeming features such as the Octan's excellent five-year warranty and the inclusion of Windows XP Professional.

A word of warning, though, you will need plenty of desk space to store this system. Not only is the 2100r bundled with two 17in NEC monitors, so you can have dual-screen setup, it also comes with a monster-sized case. The silver metallic-finish tower has an unusual

see-through plastic panel and houses two huge fans, so heat dissipation won't be a problem. If you want the best in visual display then the Octan's low-quality monitors may disappoint. That said, they are more than adequate in the average work environment.

5 Cybyte XP2000RD+

Cybyte entered the Power PC chart for the first time last month and, as such, we didn't know what to expect from the new manufacturer. As it happens, the company turned out a good all-rounder PC that just missed out on a Recommended award.

Cybyte opted for a two-tone case with dark blue hue that avoids the trap of looking like an imitation Mac. Despite the XP2000RD+ using the slower Athlon XP 2000+ processor, clocked at 1.67GHz, with 512MB of DDR (double data rate) RAM, the powerful system achieved an impressive WorldBench 4 score of 124, proving it's no slouch. Inside is a capacious 120GB hard drive, although there's no Raid configuration.

Audio is well catered for by the Audigy sound card and Inspire speakers, but the powerful GeForce4 Ti 4600 graphics card is let down by an unimpressive AOC Spectrum monitor. The shadow mask tube technology and poor dot pitch simply can't compete with the other 19in monitors in the chart. You're also not guaranteed much protection with a two-year return-to-base warranty, and there's little in the way of documentation or software.

Overall, though, the Cybyte's speedy performance and attractive design mean this relative newcomer to the Power PC chart hangs on to its mid-table position.

↑ Disappointing audio, but the Hi-Grade Meridian still achieves a second-placed WorldBench 4 score of 125

6 Hi-Grade Meridian XP 2G PV05

Having nestled happily in second place not three months ago, this Hi-Grade Meridian now struggles to hold on to sixth. Having said that, the Meridian XP's WorldBench score of 125 remains one of the fastest. Backing up the Hi-Grade's Athlon XP 2000+ processor is 512MB of DDR (double data rate) RAM. The 80GB Maxtor hard drive offers ample storage – it may not be the largest disk in the chart, but it should still prove difficult to fill.

The Meridian uses the 19in LG Flatron 915FT monitor, but Hi-Grade's GeForce3 Ti 500 graphics card can't keep up with the frame rates of the GeForce4 range. The audio is also disappointing and the Creative Audigy sound card would have been preferable to the onboard nForce audio controller.

7 Mesh Matrix XP 2200+Ti Pro

Unlike the other Athlon 2200+ systems seen this month which ended up in the Budget PC chart, the Mesh's price puts it into the Power category. Unfortunately, its

POWER PCs

↑ Our only new entry this month, the expensive Mesh Matrix XP features an Athlon 2200+ processor

performance doesn't reflect this inflated price tag. PCs using the older Athlon XP 2100+ chip managed an average of about 122 in our WorldBench 4 tests, so the Matrix's score of 120 is disappointing. Its performance in our graphics test was only negligibly better than the NEC's budget 2200+ offering and video encoding test results were also uninspiring. The 2200+ Ti Pro houses good-quality components and a generous three-year onsite warranty, but costs £1,499. The hefty price tag is largely due to the 17in NEC flat-panel display and the bundled 48-/40-/12-speed (read/write/rewrite) Teac CD-RW drive.

8 Systemax Inspire A2000BA

Another system starting to show its age is this ex-Recommended PC from Systemax. The Systemax Inspire employs the AMD Athlon XP 2000+ to assist its high score of 121 in WorldBench 4. Having said this, though, it is the only PC that's equipped with 256MB of DDR (double data rate)

↑ The Systemax Inspire is the only PC to offer 256MB of DDR RAM, instead of the more generous 512MB

PC WorldBench 4: Power PCs

(longer bars are better)	25	50	75	100	125	→ faster
WorldBench 4						
Atlas Meridian XP 2100						128
Hi-Grade Meridian XP 2G PV05						125
Cybyte XP2000RD+						124
Best Price Poweroid.com 2013						123
Systemax Inspire A2000BA						121
Multivision Vision Titan						120
Evesham Axis 2100+						119
Hi-Grade Ultis PV4 2400 PA06						119
Mesh Matrix XP 2200+ Ti Pro						119
Carrera SSC Octan 2100r						110

RAM, rather than the more generous 512MB. However, it does offer 100GB of storage space and a 128MB GeForce4 Ti 4600 card. The 19in CTX monitor is a decent screen, while the Audigy sound card and Videologic speakers ensure the audio won't let you down. Carefully arranged internally, and equipped with USB and FireWire ports, there's also little to fault in the Systemax's presentation.

↑ Although the Atlas Meridian XP 2100 falls to ninth place, its WorldBench 4 score still remains unbeaten

9 Atlas Meridian XP 2100

Atlas falls to ninth place as the once cutting-edge technologies found in the Meridian XP 2100 have now been superseded by better components. That said, it's still an impressive model. The Athlon 2100+ processor, combined with 512MB of DDR (double data rate) RAM, helped it achieve an unbeaten WorldBench 4 score of 128.

Aiding this performance is the 128MB GeForce4 Ti 4400 graphics card. The 19in LG Flatron 915FT Plus screen is always recommended and the DTT2200 speakers are solid. Backup duties on the Atlas are satisfied by a 40-/24-/10-speed

(read/write/rewrite) CD-RW drive and there's a 16-speed DVD-ROM. On top of all this, a three-year onsite warranty protects your investment.

10 Hi-Grade Ultis PV4 2400 PA06

Dropping one place to number 10 is the Ultis from Hi-Grade, which was the first system we reviewed that used Intel's 2.4GHz chip. Equipped with 512MB of DDR (double data rate) RAM the Ultis only managed a WorldBench 4 score of 119 – a full nine points short of the Atlas Meridian XP 2100. Both systems employ the same 128MB GeForce4 Ti 4400 card and, although it provides blistering frame rates, the Athlon still kept its edge over the Pentium 4 processor.

Sound comes from the Creative Audigy and DTT2200 speakers, and there's a TV card thrown in for good measure. On the optical front you'll find a 16-speed DVD-ROM and a 40-/24-/10-speed (read/write/rewrite) CD-RW. In addition to a copy of Windows XP Home there's also Works Suite 2002. Overall, the Ultis is let down on performance and value for money.

↓ Check out next month's Power PC chart to see if the Hi-Grade Ultis can hang on at number 10

The chip race goes on

Processor growth rates may be slowing, but the battle between Intel and AMD remains constant. AMD claims that its chips can achieve far more than Intel processors with the same clock speed. The fastest Athlon has a clock speed of 1.82GHz, but AMD rate it as being the equivalent of a 2.2GHz Intel Pentium 4. But even allowing for this, the latest Pentium 4 has a significant speed advantage at 2.53GHz. And it's not just raw gigahertz that distinguishes the new Intel processor. Accompanied by an enhanced chipset, the i850E, and a bus speed increase from 400MHz to 533MHz, the

Pentium 4 has been given far more room to manoeuvre. Add to this the improved memory and USB 2.0 support, and you could have technology that might stand the test of time. The Athlon 2200+ can still pull in WorldBench 4 scores of 120 and 122, allowing them to compete comfortably with the 121 notched up by Evesham's 2.53GHz system. But while the Athlon wins out for overall value (with the fastest Intel technology costing around £100-£150 more), the bridging of the performance gap by the new 2.53GHz P4 suggests that Intel may yet retake the lead in the chip race.
