

Edited by Ben Camm-Jones

James Bond eat your heart out. We've got the latest all-action gadgets to hit the market, including a seascooter, a discreet camera pen and, for the panickers among you, a crisis management system

### Sharp SL-6000 Zaurus

Linux PDA

Three SL-6000 models are joining the Linux-based Zaurus PDA family, but don't expect to see them here any time soon - they are currently only available in Japan. A Qwerty keyboard is hidden under a sliding panel below the screen and these are also the first Linux PDAs in the world to have built-in Wi-Fi technology.

- > from ¥92,000 (£490)

### See-Doo Seascooter GTI

Underwater drive propulsion vehicle

If you fancy yourself as a bit of an action hero and want to show off on the beach, then the Sea-Doo Seascooter GTI will be right up your street. It's capable of going at a mind-blowing 2.5mph (that's just over two knots) and is good for depths of up to 30m. Even if you're not into James Bond-style antics, it does have some practical uses, particularly if you're a keen snorkeller.

### Casio SY-4100

Bathroom TV

Watching TV in the bath is a favourite pastime of Japanese housewives and nearly 100,000 units of the SY-4100's predecessor were sold. There's a 4in colour TFT (thin-film transistor) screen and the batteries should last for four hours. It's waterproof and tunes in to analogue TV. Like the Sharp Zaurus though, it's unlikely to make it out of Japan any time soon.

### Swann PenCam with Handheld Monitor

Pen camera and monitor

Another toy that wouldn't look out of place in 007's pocket is the Swann PenCam and Handheld Monitor. The pen conceals a camera that can send images to a receiver up to 100m away, and you just have to click the top to start transmitting. The receiver is in the monitor which will fit neatly into your pocket, but you can also transmit to TVs and security monitors.

### Next Base DVD Tablet Player

Portable DVD player

If you want to watch movies wherever you go then why not invest in this portable DVD tablet player. It's only 20cm wide and less than 3cm deep and is multi-regional as well so you can play just about any DVD on it. You can use it on the move or plug it in at home, although the 7in screen might seem a little small in your living room.

### Network Anatomy CommanderPack

Communication and crisis management system

If you are very, very rich and just a little bit paranoid then the CommanderPack might interest you. Designed for harsh environments, the system consists of a backpack, helmet and bionic hand. The CommanderPack also has a tablet PC with plenty of crisis and information management software. The tablet PC can be operated wirelessly with the bionic hand without removing the backpack. There is a camera, microphone and light, and the whole thing weighs about 7kg.
