## BEGINNER DIGITAL CAMERAS

### 1 Olympus Camedia C-220 Zoom

When it comes to value for money and ease of use, the Best Buy Olympus Camedia stands head and shoulders above the competition. While other cameras may come with more extras or higher specifications, none can offer 2Mp (megapixel) resolution for under £200.

This 2Mp CCD (charge-coupled device) translates into a maximum resolution of 1,600x1,200, and the C-220 Zoom is bundled with an 8MB SmartMedia storage card. This can capture five high-resolution images or, if you drop the quality, it will stretch to holding 49 shots. There's no TIF option or audio, but you can catch up to 60 seconds of movie footage and there's an impressive 3x optical zoom that can be enhanced to a 2.5x digital zoom.

The Camedia is easy to use thanks to a well laid-out menu system on the clear 1.5in LCD (liquid-crystal display). Most of the photography settings are taken care of automatically, with preset options for white balance and exposure, but there's no jog dial to confuse the novice user – instead there's a four-way navigation pad.

## INTERMEDIATE DIGITAL CAMERAS

### 1 FujiFilm FinePix F601 Zoom

With its metal alloy finish, the compact F601 Zoom is one of the most stylish models we've seen in our Test Centre. The Porsche design is tall rather than wide and has a lens cover that slides over a 3x optical zoom. A well laid out navigation and menu system on the clear 1.5in LCD (liquid crystal display) mean it's simple to use. Though the F601 has a 3.1Mp (megapixel) CCD (charge-coupled device) it utilises Fuji's Super CCD technology, so it extract 6Mp resolution from the sensor. All the photographs we took displayed faithful colour reproduction and accurate detail. We were also impressed with the 4.4x digital zoom.

Image quality usually degrades quickly with digital zooms but, on full zoom, there was little loss of detail. There's a movie mode option and you can annotate images with a small sound file. Wider ISO settings, higher shutter speeds and a better flash distance help this model cope with a diverse range of photographic conditions. Overall, the F601 offers an excellent combination of style and substance.

## BEGINNER DIGITAL CAMERAS

**2** Sony CyberShot DSC-P71

Claiming the title of most expensive camera in the

Beginners chart, the CyberShot DSC-P71 offers plenty of features to justify its higher price tag, and the images we took with it were the best of the bunch. Sony has used the familiar compact CyberShot chassis and it serves this 3.2Mp (megapixel) device well. As the Sony is a low-end model there's little manual control – the camera takes care of everything. The Sony CyberShot was pipped to the post by the sheer value for money offered by our Best Buy, but if you can afford it then this is our recommendation.

**3** Canon PowerShot A40

The PowerShot A40 is an all-round model, but its lower-resolution CCD (charge-coupled device) stops it from moving further up the chart. Given the Canon is a 2Mp (megapixel) model, it just can't compete on value for money. Even so, we still don't think you'd regret opting for this camera. It's ideal for novices and is one of the few devices in this price range that offer a RAW format for the highest-quality images.

**4** Kodak DX 3215

The DX 3215 comes with a docking cradle, which makes charging the batteries and downloading photos easy. It also has a wealth of software to help you view and share images. Unfortunately though, the Kodak can't match the image results achieved by its rivals at the top of the chart. It is also a very slow camera – hence its position at number four.

**5** Ricoh Caplio RR120

While the Caplio RR120 is good value for money, its features are too limited to see it climb higher in our chart. The 2.2Mp (megapixel) CCD (charge-coupled device) offers a maximum resolution of 1,792x1,200 and the 8MB SmartMedia card can hold up to seven high-resolution Jpeg images. The camera offers basic automatic photography, although there's scope for a few user-defined settings. Quality is reliable at the maximum resolution and the colours look good, but cut the resolution and pictures will only be suitable for use online.

## INTERMEDIATE DIGITAL CAMERAS

**2** Olympus Camedia C-40 Zoom

The Camedia's main claims to fame are its size and low price. At £511, the C-40 Zoom is one of the cheapest top-end models we've reviewed and, measuring just 87x69x43mm, it is also extremely compact so you can carry it around all day without noticing it. The CCD (charge-coupled device) offers 3.95Mp (megapixel) resolution and image quality is impressive. Furthermore, you're given lots of control over your pictures thanks to the manual shutter speed priority and aperture priority automatic modes.

**3** Canon PowerShot G2

The PowerShot G2 is somewhat higher up the price bracket than the rest of the competition, but if you want a serious camera then Canon is well worth saving your pennies for. This 4Mp (megapixel) camera captures images up to a maximum resolution of 2,272x1,704dpi (dots per inch), while the 3.6x optical zoom lens is of a high quality. If you aspire to more than snapshot photography, but don't want to carry an SLR (single lens reflex) type camera around, the G2 is a worthy consideration.

**4** Canon PowerShot S30

Canon's PowerShot S30 claims a place in the chart by virtue of its low price and good features. The 3.2Mp (megapixel) CCD (charge-coupled device) is more than respectable and the photographs we took looked better than some digital cameras with a higher specification. Responsive, yet easy to use, the PowerShot is perfect for point-and-click consumers as well as keen photographers. Canon has also been generous with the software bundle.

**5** Pentax Optio 330

The Optio 330 has a robust metal body and offers a 3x optical zoom. It offers three main shooting settings on the jog dial and a simple menu system that includes configurations for various photographic conditions. It even has manual focus and night shooting, to add variation and control. Its fast reactions, from picture playback to image capture, make it a joy to use. Overall, the Optio's price and comparatively low megapixel rating keep it in fifth place.
