## Buying advice: budget PCs

Buying a PC when you're on a budget is tough. The trick is to figure out precisely what you want to use the PC for and therefore in which areas you should splash out and in which you are prepared to compromise. For example, if you're a gamer you'll need a good graphics card and monitor. Alternatively, if you're into digital video editing then you'll want the biggest hard drive you can afford.

In terms of processors, the Athlon 2200+ dominates this chart at the moment, but the 2400+ and 2600+

chips crop up in one or two systems.

If you want a Pentium 4, look for one that runs at at least 2.4GHz. Bear in mind, though, that when AMD or Intel bring a new CPU out the price of older chips tends to come down, so keep an eye on the runners-up rather than the high-flyers.

The standard memory allotment in the Budget chart is quickly becoming 512MB of DDR (double data rate) RAM, although 256MB of DDR RAM should serve the needs of most PC users. Aim to get PC2700, or DDR333, RAM as this will give faster and therefore better performance than PC2100 or DDR266 RAM.

Most budget systems will come with an 80GB hard drive these days, but disks of 100GB and 120GB are available too. It is desirable to have as much storage space as possible even though you'll probably never come close to filling it all. In terms of CD-RWs, don't go for anything with less than 40-/16-/10-speed (read/write/rewrite) facilities.

When looking at screens, you should only be satisfied with a 17in monitor if it has very good specifications, as you should be able to get a decent 19in model for your money. Either way, check that it can achieve an optimal resolution of

	Graphics card maker Graphics chip Graphics card memory	Sound card Speakers Subwoofer	DVD drive speed CD-RW read/ write/rewrite rate	Operating system, software and extras	Comments
	nVidia	Creative Labs Audigy 1394	16x	Windows XP Home, Pinnacle Studio 7.0	A fast processor and DDR400 memory push this PC to the top. The WorldBench 4 score may not be the best, but great graphics and fast video encoding help to make up for this. What really swung it for the Axis, though, was the Flatron display, a pleasingly low price and a three-year warranty.
	nVidia GeForce4 Ti 4200	5 x Creative Labs Inspire 5300	48x/40x/12x		
	64MB	yes			
	MSI	Creative Labs Audigy 1394	16x	Windows XP Home, Lotus SmartSuite 9.7	Despite its slower processor the Mesh outstripped our Best Buy in the WorldBench 4 tests, proving it's a fast performer. Graphics are equally good, while a 120GB hard drive is generous. An Audigy sound card handles audio beautifully, so it's a shame the Matrix was let down by its return-to-base warranty.
	nVidia GeForce4 Ti 4600	5 x Creative Labs Inspire 5300	48x/40x/12x		
	128MB	yes			
	ATI	Creative Labs Audigy 1394	16x	Windows XP Home, Lotus SmartSuite 9.7	Multivision's innovative system uses ATI's latest Radeon 9700 graphics card with 128MB of RAM, ensuring good graphics performance. The PC's WorldBench 4 score was respectable thanks to the 2200+ processor. A sound warranty backs this PC which missed out on a higher placing due to the tough competition.
	ATI Radeon 9700	5 x Creative Labs Inspire 5300	48x/48x/12x		
	128MB	yes			
	ATI	Creative Labs Audigy 1394	16x	Windows XP Home, Sun Open Office	NetHighStreet takes the final Recommended award. Its 2.5GHz Pentium 4 chip only managed a WorldBench 4 score of 113, which is several points behind the competition. But performance isn't everything and this PC has more to offer, including a good monitor, 128MB Radeon 9700 graphics card and Audigy sound card.
	ATI Radeon 9700	5 x Creative Labs Inspire 5300	40x/40x/12x		
	128MB	yes			
	MSI	Creative Labs Audigy 1394	16x	Windows XP Home, Lotus SmartSuite 9.7	Systemax has opted for a PV700 flat-panel display on the 7317, which is one of the best screens around. Fortunately, it wasn't so costly an addition that corners had to be cut to include it, so you still get good performance, smooth graphics and surround sound from this system. However, it's let down by its higher price.
	nVidia GeForce4 Ti 4600	5 x Videologic ZXR 500	48x/48x/16x		
	128MB	yes			
	Gainward	onboard	16x	Windows XP Home, Sun Open Office	The Aptus is competitively priced and scored extremely well in our WorldBench 4 tests. However, its basic 17in monitor, onboard sound and four-point speaker system keep it mid-table. If you're looking for a pared-down performer, this is a good choice. The five-year warranty, first year onsite, is a bonus too.
	nVidia GeForce4 Ti 4600	4 x Mercury Home Theatre	48x/48x/12x		
	128MB	yes			
	nVidia	Creative Labs Audigy 1394	16x	Windows XP Home, Lotus SmartSuite 9.7	Once a Best Buy, this model has been superseded by new additions to the chart that beat its specifications, though its WorldBench 4 score of 118 means it can still handle everyday tasks easily. The display is good quality, as are graphics and audio. But now you can get more for your money.
	nVidia GeForce4 Ti 4200	5 x Videologic ZXR 500	48x/48x/12x		
	128MB	yes			
	Leadtek	Creative Labs Audigy 1394	16x	Windows XP Home, Pinnacle Studio 7.0	The Axis' WorldBench 4 score of 120 is just two points shy of this month's Best Buy. The Samsung display is fairly decent, as are the graphics from the GeForce4 Ti 4200 card, although a better card might have secured the Axis a higher place. Another drawback to note is that there's no office suite.
	nVidia GeForce4 Ti 4200	5 x Creative Labs Inspire 5300	40x/32x/10x		
	64MB	yes			
	ATI	Creative Labs Audigy 1394	16x	Windows XP Home, Ability Office	One of this CCL model's distinct advantages is its excellent Iiyama monitor, which offers a four-port USB hub, built-in speakers and top-notch image quality to boot. However, this isn't enough to ensure it a high position and what keeps it down at the bottom of the chart is a poor WorldBench 4 score and high price.
	ATI Radeon 9700	5 x Videologic ZXR 500	48x/48x/24x		
	128MB	yes			
	ATI	Creative SoundBlaster Live 5.1	16x	Windows XP Home, Microsoft Works 2002	The NEC Powermate i-Select XL5 finds itself at number 10 due to its poor performance, miserly 40GB hard drive and meagre one-year warranty. These specs are not good enough to really cut the mustard in this chart anymore. But on the bright side it does come with a flat-panel monitor and plenty of spare USB ports.
	ATI Radeon 9700	5 x Creative Labs Inspire 5300	40x/16x/10x		
	128MB	yes			

1,280x1,024 at 75Hz. Better still, for really sharp images, look for 1,600x1,200 at 75Hz. In terms of dot pitch, 0.25mm or lower is fine. Flat-panel displays will push the price of the budget system up but these screens still might be worth looking at if space is at a premium.

A 64MB budget graphics card will probably suffice in a system at this price point but you can find the new 128MB cards being offered in this price range. The top-of-the-range models at the moment are nVidia's GeForce4 Ti 4600 and ATI's Radeon 9700 Pro, but if you don't necessarily need to have

astoundingly fast frame rates all the time a GeForce4 Ti4200 or ATI Radeon 9000 Pro are very capable graphics cards.

Finally, in terms of your sound system, Creative's Audigy card is the best option, although the trusty SoundBlaster Live 5.1 is still available. Avoid onboard sound if at all possible, as this is never as impressive as a dedicated card. Speaker systems should have five satellites and a subwoofer if you want to create good-quality surround sound.

↓ A 2.13GHz Athlon chip and fast DDR400 memory take the Evesham Axis to the top
