## Ulead COOL 360 Viewer

The COOL 360 Viewer is a simple little utility that allows you to navigate a 360° panoramic image. You can run the Viewer by:

1. Double-clicking the UPV.EXE Icon from Windows Explorer.

2. From the Windows Start menu, go to the Ulead COOL 360 program group and select COOL 360 Viewer.

3. Double-click any valid panorama file (*.UVR). (The Viewer must be set as the default program for opening panoramas for this to work.)

This image shows how the viewer looks with an image loaded. The orange square in the middle represents the **Zoom region**. When you move the mouse into this area, you can zoom in by (clicking and) dragging the mouse up or zoom out by dragging the mouse down. Notice that the cursor changes to a **magnifying glass**. Outside of this region, you can (click and) drag the mouse in the direction you want to move towards. Again, the cursor changes to the respective **navigation cursor**, as pictured above.
