### Split files across multiple floppy disks

If you need to put your *i publish* file (or another file) on a floppy disk, but it's too large to fit on one disk, you can split the file across multiple disks.

1. On the *i publish* File menu, click "Split File Across Multiple Disks."

Or, if you don't have *i publish* open, click the Windows Start button, point to Programs, point to *i publish*, and then click "Split File Across Multiple Disks."

2. Click the Browse button, and then select the file you want to split up.

**Tip:** To choose a file other than an *i publish* file (like a Microsoft Word file), click the Files Of Type box, and then click All Files (\*.\*) .

3. If necessary, change the Output Drive box to your floppy disk drive letter.

4. Click Split.

5. Insert floppy disks as prompted.

Note: For best results, use empty floppy disks.

6. When you're finished, click Close.

### Combine split files back into one file

If you've split a file across multiple floppy disks, you can combine them back into one file.

1. On the *i publish* File menu, click Combine Split Files.  
Or, if you don't have *i publish* open, click the Windows Start button, point to Programs, point to *i publish*, and then click Combine Split Files.
2. If necessary, change the Input Drive to your floppy disk drive letter.
3. Click the Browse button, and then select the folder where you want to save the combined file.
4. Click Combine.
5. Insert the floppy disks as prompted.
6. When you're finished, click Close.
