

# i publish [User's Guide](#)

## What do you want to do?

- [▶ Create or open a document](#)
- [▶ Add, replace, or change something](#)
- [▶ Change the look and feel of the document \(layout, colors, borders...\)](#)
- [▶ Copy, move, resize, delete, or clear an object](#)
- [▶ View pages](#)
- [▶ Save a document or publish it for print, the screen, or the Web](#)
- [▶ What you want to do isn't listed here](#)

[Handbook](#)  
[Cross-References](#)

Note the previous and next topics are almost identical.

Leave this paragraph here...for some (unknown) reason, it makes the next topic appear properly.

### Technical Support options

There are many options available on our Tech Support Web site including:

- A searchable Knowledge Base
- A Tech Support Feedback form (to report issues or request features)
- FAQs (Frequently Asked Questions)
- Faxback support (to have technical documents faxed to you automatically)
- Information about how registered *i publish* users may receive technical support by phone

You may access all of these support resources at:

[http://www.design-intelligence.com/  
support/support.html.](http://www.design-intelligence.com/support/support.html)

If you have an issue that cannot be addressed in any of the above areas, you may send email to:  
[support@design-intelligence.com](mailto:support@design-intelligence.com)

## Handbook cross-references

The *i publish* Handbook comes with the CD version of *i publish*. To purchase the Handbook separately, see our Web site:

<http://www.design-intelligence.com/cgi-bin/store/ipublish>

**To see a topic:** Click + next to a chapter, find your page, and then click a topic.

### **Chapter 1 "Getting started"**

(pages 7 - 22)

### **Chapter 2 "Working with layouts"**

(pages 23 - 46)

### **Chapter 3 "Schemes at work"**

(pages 47 - 60)

### **Chapter 4 "Publishing online"**

(pages 61 - 74)

### **Chapter 5 "Step-by-step basics"**

(pages 75 - 84)

### **Chapter 6 "Getting help"**

(pages 85 - 90)

**Tip:** To quickly get help, on the *i publish* Help menu, click Index. Then type what you're looking for.

## Handbook cross-references

The *i publish* Handbook comes with the CD version of *i publish*. To purchase the Handbook separately, see our Web site:

<http://www.design-intelligence.com/cgi-bin/store/ipublish>

**To see a topic:** Click + next to a chapter, find your page, and then click a topic.

### **Chapter 1 "Getting started"**

(pages 7 - 22)

p. 10    ● Create a new document

p. 14    **Pictures**

● Preview a picture before you add it

● Drag and drop pictures from the control window

#### **Text**

● Preview your text before you add it

● Drag and drop text from the control window

#### **Tables, charts, or diagrams**

● Preview your table, chart, or diagram before you add it

p. 18    ● Change the layout of the entire document

● Change one or more schemes for the entire document

p. 19    ● Publish your document as a Web page

● Publish your document as an onscreen presentation

● Print your document

### **Chapter 2 "Working with layouts"**

(pages 23 - 46)

### **Chapter 3 "Schemes at work"**

(pages 47 - 60)

### **Chapter 4 "Publishing online"**

(pages 61 - 74)

### **Chapter 5 "Step-by-step basics"**

(pages 75 - 84)

### **Chapter 6 "Getting help"**

(pages 85 - 90)

**Tip:** To quickly get help, on the *i publish* Help menu, click Index. Then type what you're looking for.

## Handbook cross-references

The *i publish* Handbook comes with the CD version of *i publish*. To purchase the Handbook separately, see our Web site:

<http://www.design-intelligence.com/cgi-bin/store/ipublish>

**To see a topic:** Click + next to a chapter, find your page, and then click a topic.

- **Chapter 1 "Getting started"**  
(pages 7 - 22)
- **Chapter 2 "Working with layouts"**  
(pages 23 - 46)
  - p. 26
    - Fit your text and pictures on an *i publish* page
    - How can you get text and pictures to fit better on the page?
  - p. 31
    - Set where pictures, sidebars, and pull quotes appear
    - Change the emphasis of a picture
    - Choose individual layout options to create a custom layout
    - Trim (crop) the picture
  - p. 33
    - Change the style of text in a component
  - p. 37
    - Choose individual layout options to create a custom layout
- **Chapter 3 "Schemes at work"**  
(pages 47 - 60)
- **Chapter 4 "Publishing online"**  
(pages 61 - 74)
- **Chapter 5 "Step-by-step basics"**  
(pages 75 - 84)
- **Chapter 6 "Getting help"**  
(pages 85 - 90)

**Tip:** To quickly get help, on the *i publish* Help menu, click Index. Then type what you're looking for.

The "Common Windows Open dialog box" popups are used for:  
Open, Insert File, Insert Picture

**Common Windows Open dialog box—Look In combo box**

Lists the available drives and folders.

To open a document on a different drive or folder, click this box, and then click the drive or folder you want. The contents of the current drive or folder appear below the Look In box.

To open the folder one level above the current one, click .

Common Windows Open dialog box—Toolbar button—Up one level

Click this to move up one folder in the folder structure.

Common Windows Open dialog box—Toolbar button—Add new folder

Click this to add a new folder within the currently open folder.

Common Windows Open dialog box—Toolbar button—List

[Click this to show the files and folders in a list.](#)

Common Windows Open dialog box—Toolbar button—Details

Click this to show all details about your files and folders, such as names, file sizes, types of files, and modification dates.

## Common Windows Open dialog box—File name list

Lists the files and folders contained within the drive or folder displayed in the Look In box. To see what's inside a folder, double-click it.

You can also click the Look In box to see the hierarchy of folders.

To open the folder one level above the current one, click .

Common Windows Open dialog box—File name edit box

To specify the file that you want to open or find, type its name in this box.

You can use \* as a wildcard. For example, to see a list of all files, type: \*.\*

You can also type the full path of a file, such as **C:\My Documents\MyFile.did**

Common Windows Open dialog box—Files of type combo box

To choose the type of files you want to open, click this box, and then click the file type you want.

Common Windows Open dialog box—Open button

Opens the selected file or folder.

All dialog box—OK button

Closes the dialog box and saves any changes you made.

All dialog box—Cancel button

Closes the dialog box without saving any changes you made.

All dialog box—Apply button

Applies the changes you've made but does not close the dialog box.

File menu

## Open Existing Document

File menu

Opens an existing *i publish* document. (*i publish* documents end in .did.)

**Tip:** If you click All Files (\*.\*) in the Files Of Type box, you can open a text or picture file created in another program. The file opens in the control window (at screen left) where you can preview it before you insert it into your *i publish* document.

Click the picture below for details about each option.

## More Information

### How do you...

- [Find a file](#)
- [Open an existing document](#)
- [Preview your picture before you add it](#)
- [Preview your text before you add it](#)
- [Automatically open the last document you worked on when you start i publish](#)

## Open Web Page

File menu

Opens a Web address (URL), such as <http://www.design-intelligence.com/>, in the control window (at screen left).

Open Web Page is available only if you have installed Internet Explorer 3.02 or later.

[Click the picture below for details about each option.](#)

## More Information

### How do you...

- Type a specific Web address

Open Web Page dialog box—Location combo box

Type the Web address (or URL) of a Web site. Or, click the arrow next to this box and choose a Web address that you've already visited.

Open Web Page dialog box—OK button

Opens the current Web address in the control window (at screen left).

## Save As

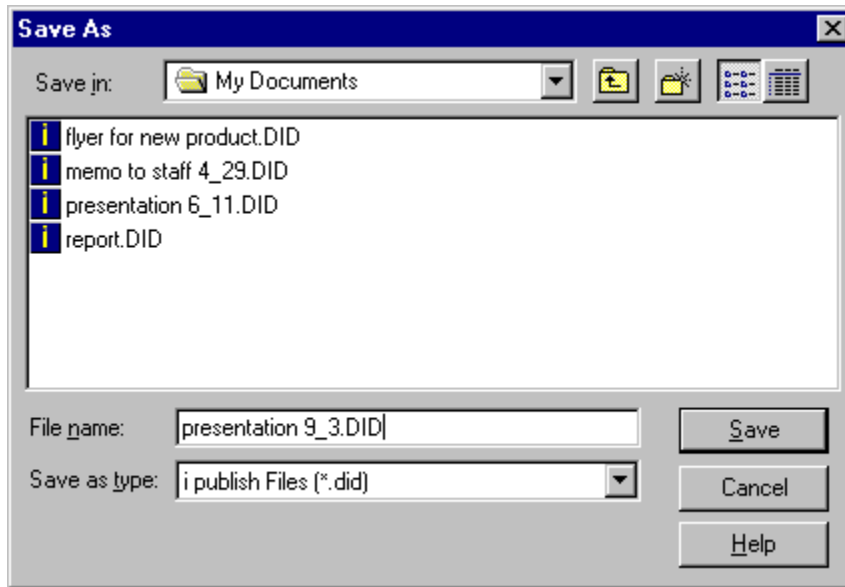

File menu

Allows you to specify a name and location for a new file. You can also use this box to:

- Change the file name of the open file.
- Save the open file to a different location.
- Make a copy of the open file, naming and saving the copy as a new file while leaving the original version intact.

**Note:** When you save a copy, *i publish* closes the original document and opens the new one.

[Click the picture below for details about each option.](#)

## More Information

### How do you...

- Save a copy of your document to a different location or with a new name
- Create a new document based on an existing one or a template

Save As dialog box—Save in combo box

To save your document in a different folder or on a different drive, click this box, and then click the location you want. The contents of the current drive or folder appear below the Save In box.

To open the folder one level higher, click .

## Save As dialog box—File name list

Lists the files and folders stored in the selected location. To see what's inside a folder, double-click it.  
To open the folder one level higher, click .

Save As dialog box—File name edit box

Specifies what the currently open *i publish* file will be named.

Save As dialog box—Save as type combo box

Specifies that your document is an *i publish* document, and that the file name will end in .did

Save As dialog box—Save button

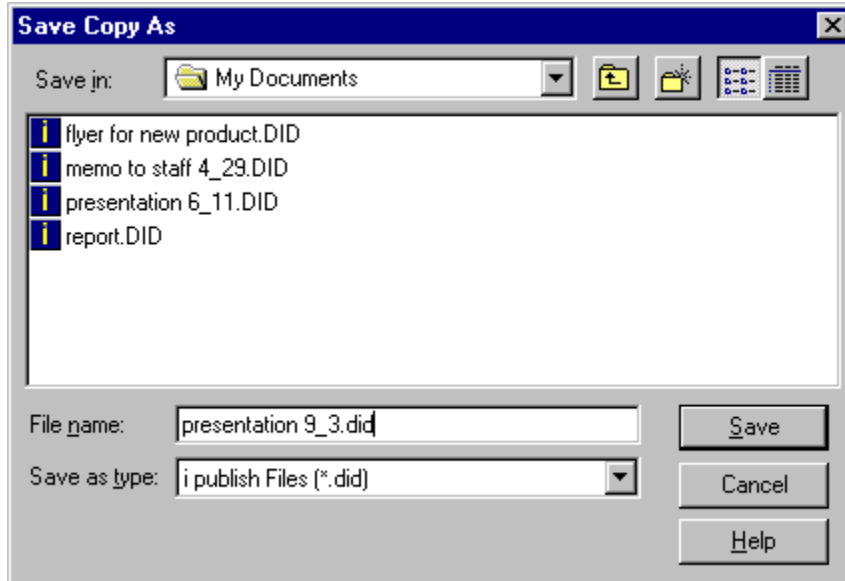

Saves the file with the name you typed and in the location you specified.

## Save Copy As

If you get to a point where you like your document, but you want to experiment with cutting text, or dropping in other text or pictures, you can create a backup document. A backup prevents you from having to undo changes you made to recreate the document you liked.

**Tip:** Backup copies take up disk space on your hard drive. You may want to delete old backup copies when you've completed your document.

[Click the picture below for details about each option.](#)

Most of the popups for the Save Copy As dialog box are the same as Save As.

Save Copy As dialog box—File name edit box

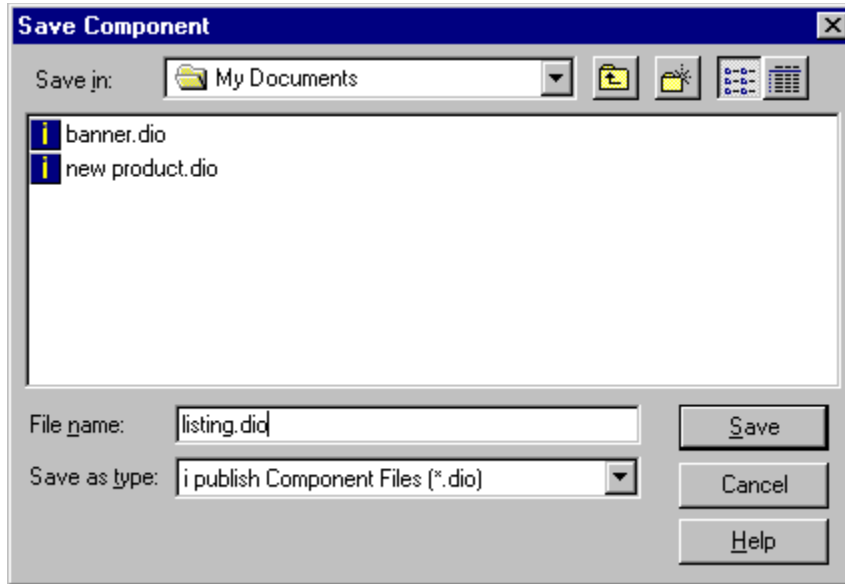

Specifies the name for the backup copy of the currently open *i publish* file.

## Save Component

File menu

Saves the selected component to a file so you can use it in a different document. Saved component filenames end in .dio

Click the picture below for details about each option.

## More Information

### How do you...

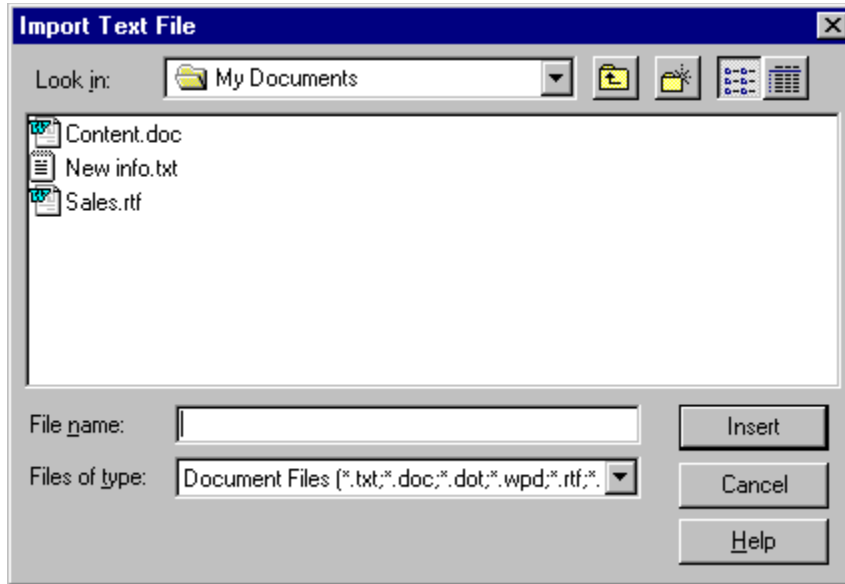

- Create your own intelligent component
- Add an intelligent component that you created
- Select compound components

## Import Text File

File menu, Import option

Inserts a text file into your document, placing it in the currently selected text component. You need to select a text component before you can insert a text file.

[Click the picture below for details about each option.](#)

## More Information

### How do you...

- Add a text file from a disk (floppy, hard, CD-ROM)
- Copy highlighted text from a disk (floppy, hard, CD-ROM)
- Find a file

### Concepts

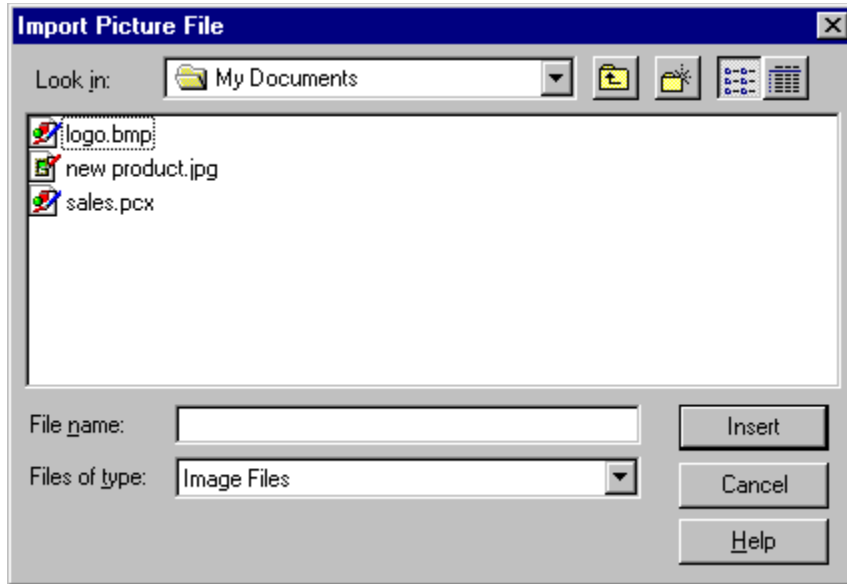

- What text formats does *i publish* support?

## Import Picture File

File menu, Import option

Inserts a picture file, placing it in the currently selected picture component. You need to select a picture component or a text component before you can insert a picture file.

[Click the picture below for details about each option.](#)

## More Information

### How do you...

- [Add a picture](#)
- [Find a file](#)

### Concepts

- [What picture formats does \*i publish\* support?](#)

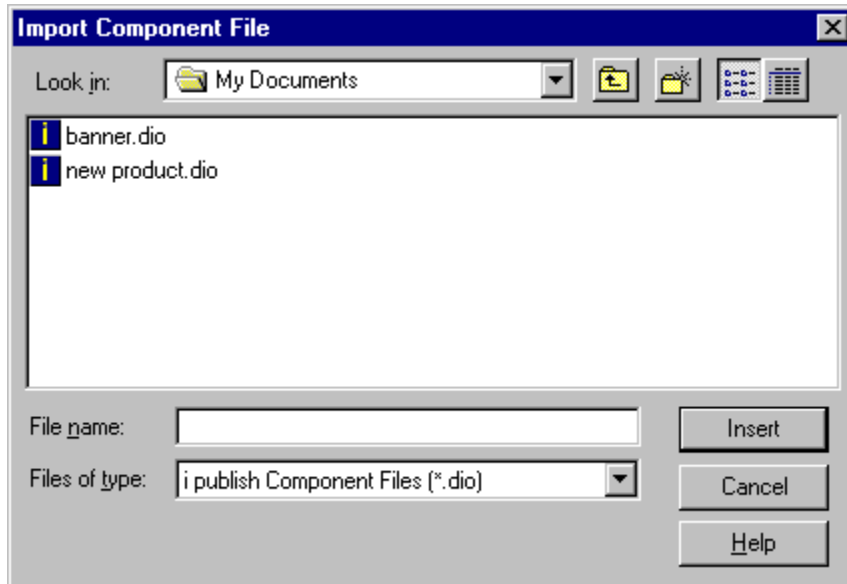

## Import Component File

File menu, Import option

Inserts a custom component into your document.

**Note:** If the current layout only accepts one of that type of component, then the inserted component replaces the current one of that type. For example, some layouts accept only one Banner component, so a custom Banner would replace an existing Banner.

Click the picture below for details about each option.

### More Information

How do you...

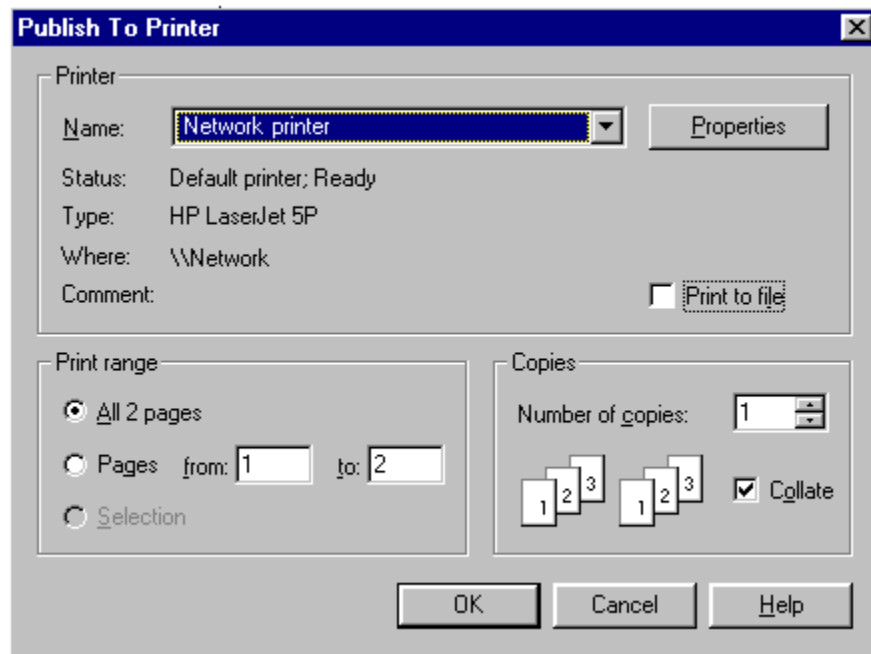

- Create your own intelligent component
- Add an intelligent component that you created

## Publish to Printer

File menu

Prints either the whole document, a range of pages, or the current selection using the selected printer.

[Click the picture below for details about each option.](#)

## More Information

### How do you...

- [Print your document](#)
- [Print more than one copy at a time](#)
- [Print your document on an outside printer](#)

**Publish To Printer dialog box—Name combo box**

Lists the currently selected printer. If you want to use a different one, click this box, and then click the printer you want to use.

**Publish To Printer dialog box—Printer Status Text button**

Shows details about the selected printer. To set specific settings for this printer, click Properties.

**Publish To Printer dialog box—Properties button**

Sets specific settings for the selected printer. The options available vary depending on the printer.

**Publish To Printer dialog box—Print to file checkbox**

Prints your document to a file instead of to the printer. After you click OK, *i publish* asks you for a file name and location for the file.

### Publish To Printer dialog box—Print range

When you click OK, you can either print:

- The entire document.
- A range of pages you specify. To print just one page, enter that page number in both boxes.

**Publish To Printer dialog box—Copies edit box**

Specifies the number of copies to print.

When you print multiple copies:

- If Collate is checked, *i publish* prints a complete copy of your document before printing the first page of the next copy.

- If Collate is unchecked, *i publish* prints the number of copies you want of page 1, then the number of copies you want of page 2, and so on.

**Publish To Printer dialog box—OK button**

Prints the document either to the printer or to a file, depending on the options you set.

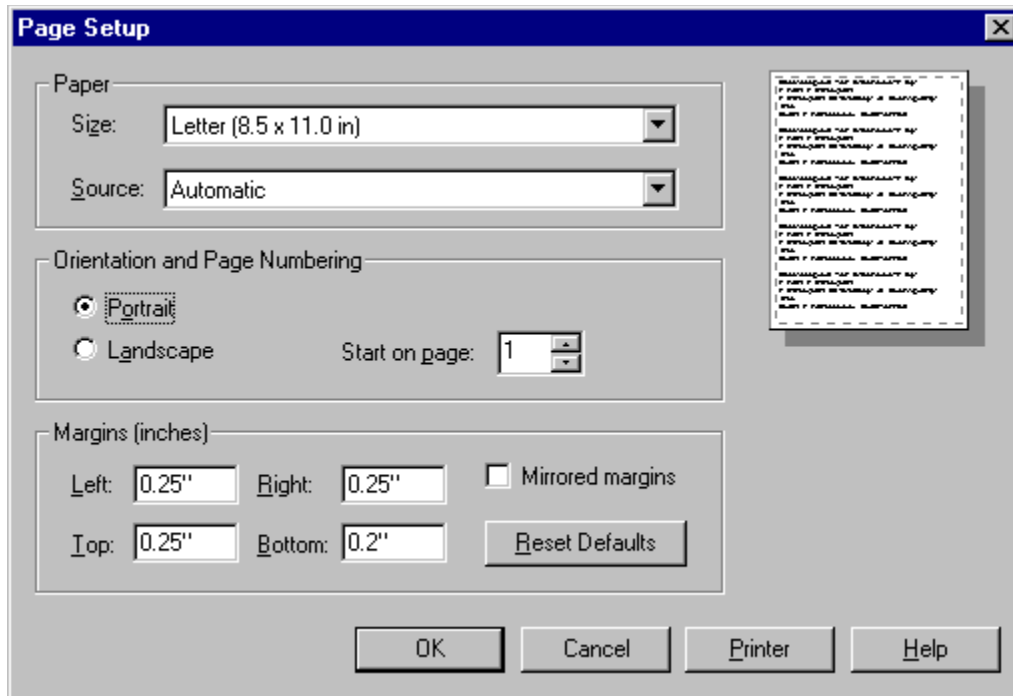

## Page Setup

File menu

Sets options for your page, including the paper size, paper orientation, margins, and starting page number.

[Click the picture below for details about each option.](#)

### More Information

#### How do you...

- [Set page options](#)
- [Change your document to European paper sizes](#)
- [Change the document margins \(top, bottom, left, or right\)](#)
- [Change the page orientation \(portrait or landscape\)](#)
- [Change the starting page number for your document](#)

Page Setup dialog box—Paper—Size combo box

Specifies the size of the paper you want to use.

Page Setup dialog box—Paper—Source combo box

Specifies where the paper you want to use is located in the printer. Different printers support different paper sources, such as the upper tray, envelope feed, or manual feed.

Page Setup dialog box—Orientation—Orientation buttons

Specifies whether the document should be printed with its top along the short edge of the paper (portrait) or along the long edge of the paper (landscape).

## Page Setup dialog box—Margins

Specifies how much space you want for each margin.

If you are creating a newsletter, you can have *i publish* created mirrored margins, so that the inside and outside margins differ.

### Page Setup dialog box—Mirrored margins

For newsletters, specifies that inside margins are the same width, and outside margins are the same width.

If your document will eventually be printed on both sides of the paper, you might want your inside margins to be larger so that your text isn't covered up by a binding or staple.

### Page Setup dialog box—Page Numbering

Specifies what the starting page number is for the document.

**Note:** For reports, *i publish* does not number the cover page or the title page; it numbers the first page of your body text as page 1.

## Page Setup dialog box—Reset Defaults

Resets the margins to the document's default margins.

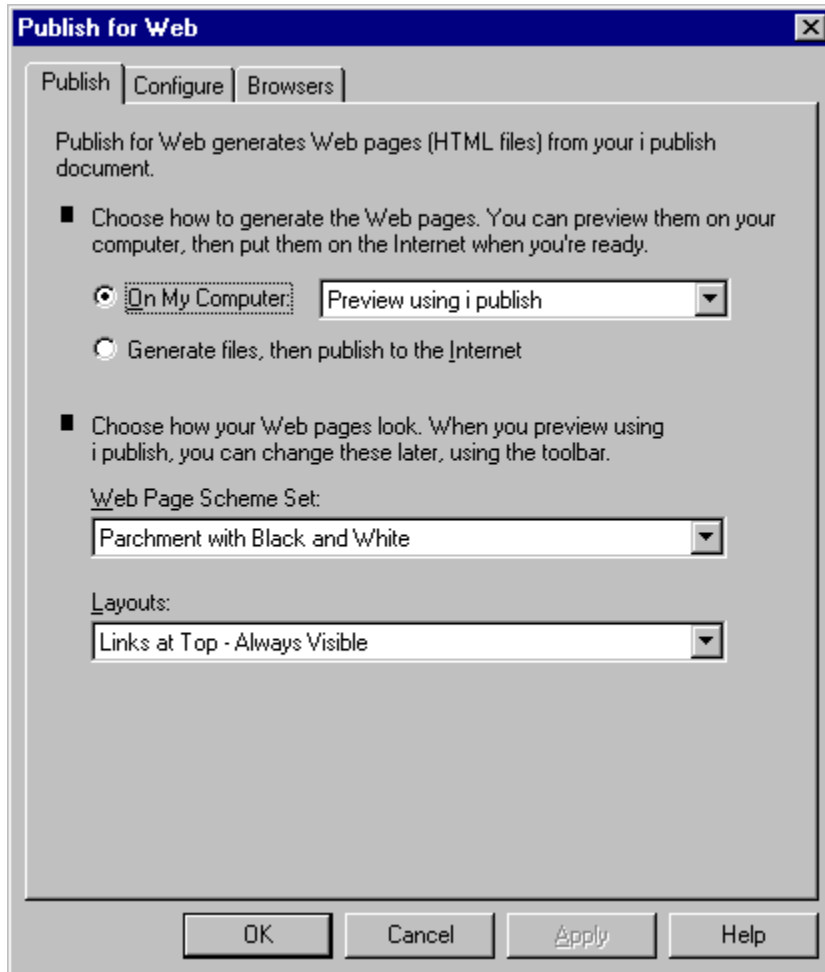

## Publish for Web (Publish tab)

File menu

Sets the colors and layout for your Web page. When you click OK, *i publish* publishes your document as a Web page either to your computer or to the World Wide Web, depending on the options you set.

**Note:** The settings on the Configure tab are used for both Web pages and onscreen presentations.

Click the picture below for details about each option.  
To display options on a different tab, click that tab in the picture.

## More Information

- [Change the look of your Web page](#)
- [Set up your Internet Service Provider \(ISP\)](#)
- [Post your Web pages to the World Wide Web](#)

### Concepts

- [What happens when you Publish for Web?](#)
- [How does i publish create your Web address \(URL\)?](#)

**Publish for Web (Publish tab) dialog box—Internet vs. My Computer**

Specifies whether you want to publish your Web page to your computer or the Web.

If you're still working on your page, you probably want to publish it to your computer, and then publish it to the Web when it's finished. You can change these settings:

- Set where on the Internet you will post your Web pages
- How?
- Set where on your computer your Web pages are stored
- How?
- Use Internet Explorer or Netscape Navigator to view your Web pages
- How?

**Note:** The Internet option is only available if you have installed the Microsoft Web Publishing Wizard 1.1.

- How do you install the Microsoft Web Publishing Wizard?

## Publish for Web (Publish tab) dialog box—Web Scheme Set

Specifies what colors are applied to your Web pages.

## Publish for Web (Publish tab) dialog box—Layout

Specifies the layout and where your Table of Contents (Navigation) is placed on your Web pages.

**Note:** This option is not available for letters, memos, faxes, or press releases.

**Publish for Web (Publish tab) dialog box—OK**

Saves your settings and publishes your Web pages either to your computer or the Internet, depending on the options you set.

**Publish for Web (Publish tab) dialog box—Close**

Closes the dialog box without saving any changes you made.

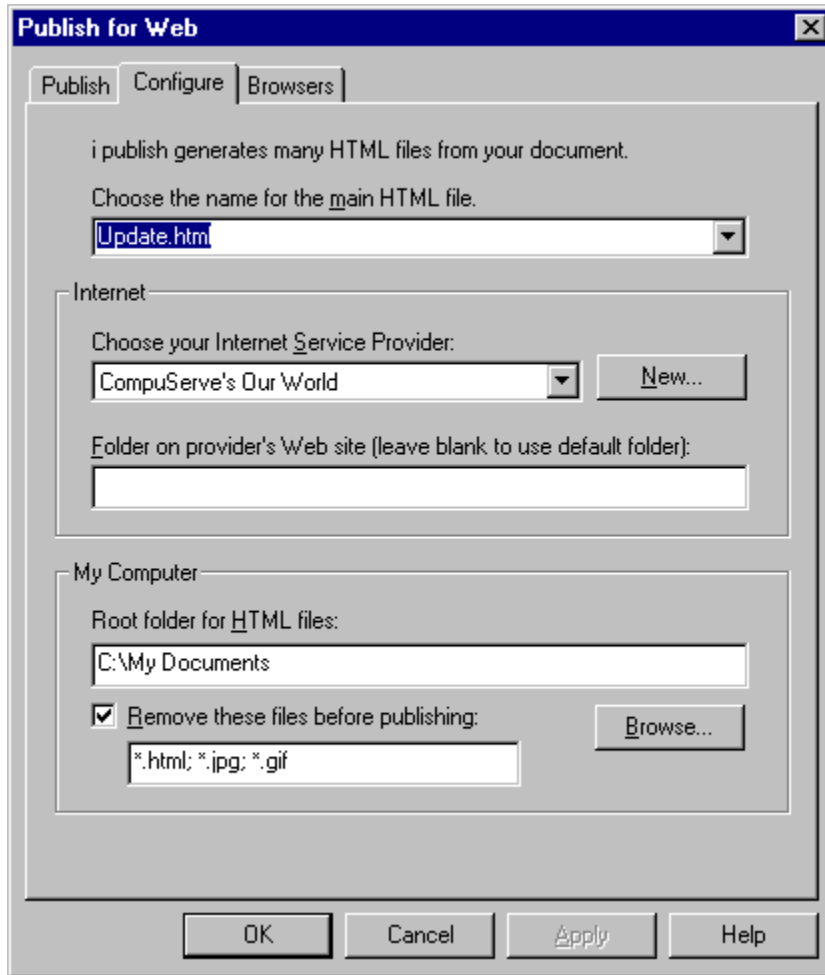

## Publish for Web (Configure tab)

File menu

Sets the colors and layout for your Web page. When you click OK, *i publish* publishes your document as a Web page either to your computer or to the World Wide Web, depending on the options you set.

**Note:** The settings on the Configure tab are used for both Web pages and onscreen presentations.

Click the picture below for details about each option.  
To display options on a different tab, click that tab in the picture.

## More Information

### How do you...

- Create a Web document
- Update your Web page
- Publish your document as a Web page
- Change the look of your Web page
- Set up your Internet Service Provider (ISP)
- Post your Web pages to the World Wide Web

### Concepts

- What happens when you Publish for Web?
- How does *i publish* create your Web address (URL)?

**Publish for Web (Configure tab) dialog box—Name for top-level page**

Specifies the file name for the main page of your Web page or onscreen presentation, ending in .html.

**Publish for Web (Configure tab) dialog box—Choose a Web site and New button**

Specifies the Internet service provider (ISP) where you will post your Web pages.

If your Internet service provider is not in the list, click New to open the Microsoft Web Publishing Wizard 1.1 to set up your Internet service provider. (**Note:** You may need to talk to your Internet service provider to get all the information you need to enter.)

■ How?

If you don't have the Microsoft Web Publishing Wizard 1.1, you can download it. Or, if you have *i publish* on a CD (compact disc), you can install it from there.

■ How?

**Publish for Web (Configure tab) dialog box—Folder on the Web site**

Specifies the folder on the Internet service provider's (ISP) computer where you will post your Web pages.

If you leave this blank, your Web pages will be posted to your ISP's default folder.

**Note:** You may need to talk to your ISP to get this information.

**Publish for Web (Configure tab) dialog box—Root folder for Web publishing and Browse button**

Specifies the folder on your computer where you will publish your Web pages or onscreen presentation.  
Click Browse to choose a different folder.

**Publish for Web (Configure tab) dialog box—Remove these files before publishing**

Specifies that when you publish your Web pages or onscreen presentation, *i publish* removes any files with the listed extensions before publishing.

If you're going to copy your Web pages or onscreen presentation to a server or other location, this ensures that the only files in the folder are the latest ones.

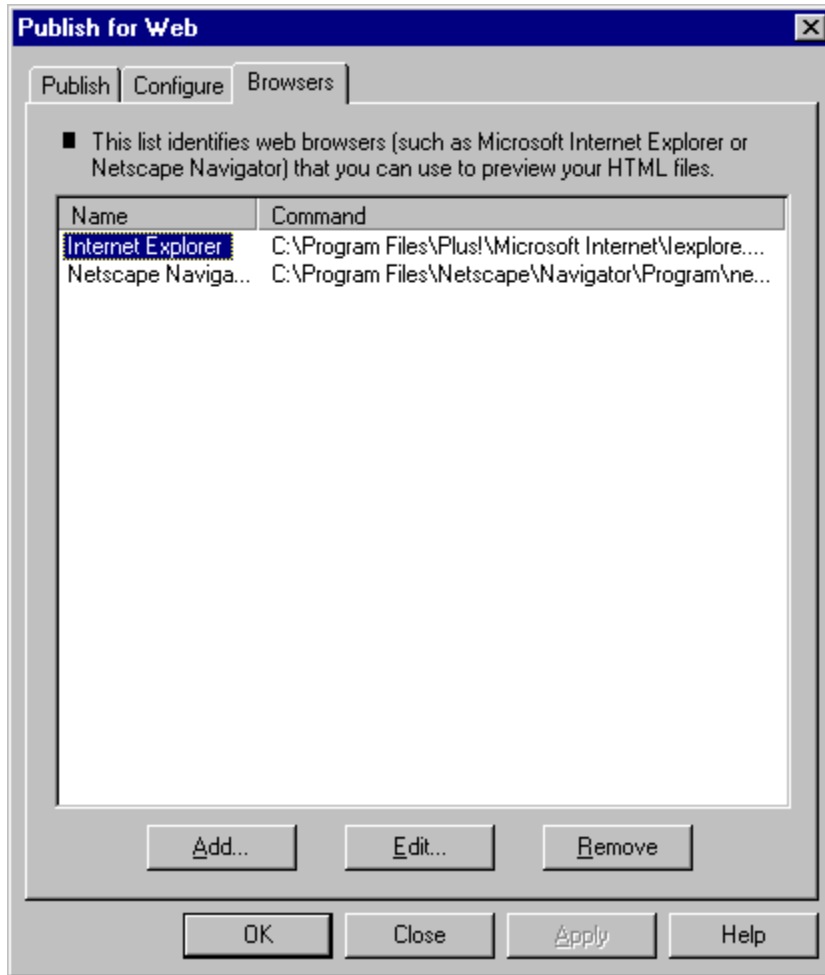

## Publish for Web (Browsers tab)

File menu

Sets the colors and layout for your Web page. When you click OK, *i publish* publishes your document as a Web page either to your computer or to the World Wide Web, depending on the options you set.

**Note:** The settings on the Configure tab are used for both Web pages and onscreen presentations.

Click the picture below for details about each option.  
To display options on a different tab, click that tab in the picture.

If your Web page will be viewed on both Internet Explorer and Netscape Navigator, you may want to view your Web page in both browsers to ensure you like the results.

To add another browser, click Add and then locate where the browser is installed on your machine.

- Typically, Internet Explorer is installed in: C:\Program Files\Plus!\Microsoft Internet\Iexplore.exe
- Typically, Netscape Navigator is installed in: C:\Program Files\Netscape\Navigator\Program\netscape.exe

You can use Internet Explorer or Netscape Navigator to view your Web pages.

- How?

**Publish for Web (Browsers tab) dialog box—Add button**

Opens the Web Browser Information dialog box in which you can set a browser that you want to use to view your Web pages.

**Publish for Web (Browsers tab) dialog box—Edit button**

Opens the Web Browser Information dialog box in which you can edit the settings for the selected browser.

**Publish for Web (Browsers tab) dialog box—Remove button**

Removes the selected browser from the list, making it unavailable as a way to view your Web page.

### Web Browser Information

If your Web page will be viewed on both Internet Explorer and Netscape Navigator, you may want to view your Web page in both browsers to ensure you like the results. Use this box to tell *i publish* about your browser.

[Click the picture below for details about each option.](#)

A screenshot of a Windows-style dialog box titled "Web Browser Information". The dialog has a blue title bar with a close button (X) in the top right corner. Inside, there are several input fields and buttons. The "Name:" field contains "Internet Explorer". Below it is a checkbox labeled "Registered Browser" which is unchecked. The "Command:" field contains "C:\Program Files\Plus!\Microsoft Internet\explore.e". Below that is an "Arguments:" field containing "-nohome". On the right side, there are four buttons: "OK", "Cancel", "Help", and "Browse...".

Name:	Internet Explorer	OK
<input type="checkbox"/> Registered Browser		Cancel
Command:	C:\Program Files\Plus!\Microsoft Internet\explore.e	Help
Arguments:	-nohome	Browse...

### More Information

#### How do you...

- Use Internet Explorer or Netscape Navigator to view your Web pages

Web Browser Information dialog box—Name

Specifies the name of the browser, such as Internet Explorer or Netscape Navigator.

## Web Browser Information dialog box—Registered Browser

If you have a browser that you always use, click this option, and then click OK. *i publish* looks at your system and adds your default browser to the list.

**Web Browser Information dialog box—Command and Browse button**

Specifies the location on your computer where the browser is stored.

- Typically, Internet Explorer is installed in: C:\Program Files\Plus!\Microsoft Internet\Iexplore.exe
  - Typically, Netscape Navigator is installed in: C:\Program Files\Netscape\Navigator\Program\Netscape.exe
- To locate the browser, click Browse.

## Web Browser Information dialog box—Arguments

Customizes the way that your browser opens and displays your Web page.

-k        Specifies to run your Web page in the browser's Kiosk Mode, which maximizes the amount of space used for your Web page.

This works for both Internet Explorer and Netscape Navigator.

-nohome    If you're running Internet Explorer, specifies **not** to open your default home page.

You probably should use this option, because you do **not** want your default home page opening first before your new *i publish* Web page.

- **Browse**

Locates a file or folder.

Click the picture below for details about each option.

**More Information**

**How do you...**

- Find a file

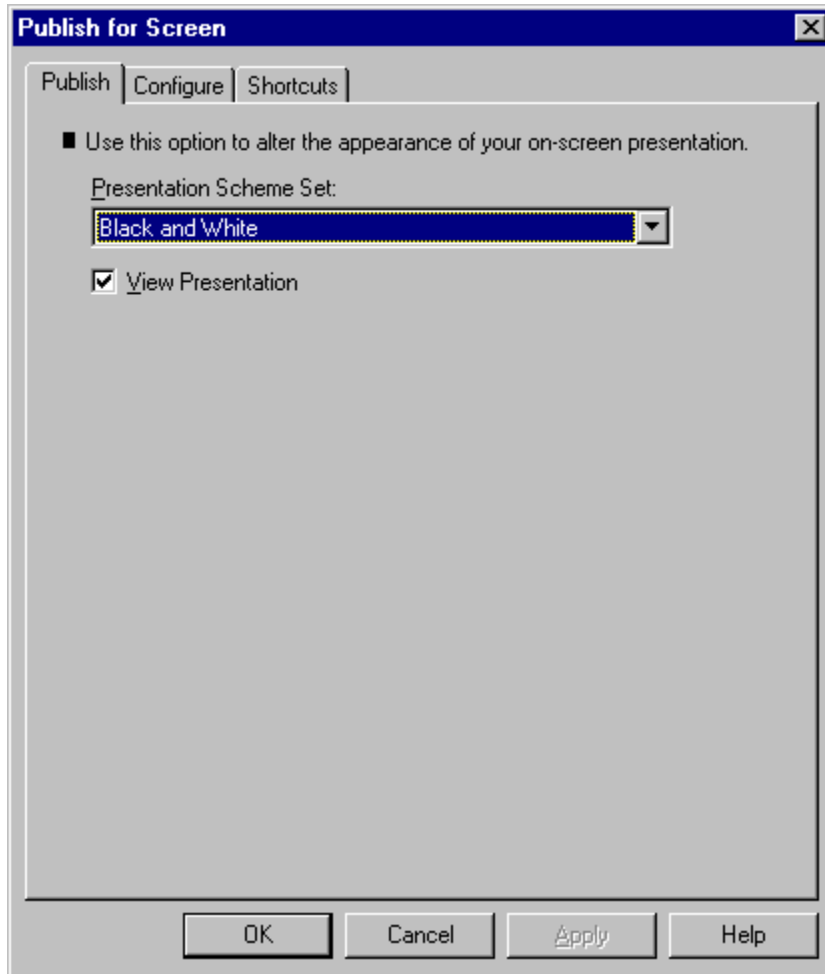

## Publish for Screen (Publish tab)

File menu

Publishes your document as an onscreen presentation, turning your printed document into presentation slides.

**Note:** The settings on the Configure tab are used for both Web pages and onscreen presentations.

[Click the picture below for details about each option.](#)

## More Information

#### Concepts

- [What's an onscreen presentation?](#)

#### Tips

- [Writing and presenting an onscreen presentation](#)

**Publish for Screen dialog box—Place shortcut to presentation on desktop**

Specifies to create a shortcut to your presentation, and then place that shortcut on your desktop.  
To start your presentation, just double-click the shortcut.

**Publish for Screen dialog box—Place shortcut to presentation in folder**

Specifies to create a shortcut to your presentation, and then place that shortcut in the folder listed below.  
To start your presentation, just double-click the shortcut.

**Publish for Screen dialog box—Specify folder to hold shortcut**

Specifies where you want to save the shortcut to your presentation.

To start your presentation, just double-click the shortcut.

**Publish for Screen dialog box—Browse**

Opens a dialog box in which you can set the folder you want to use for your presentation shortcut.

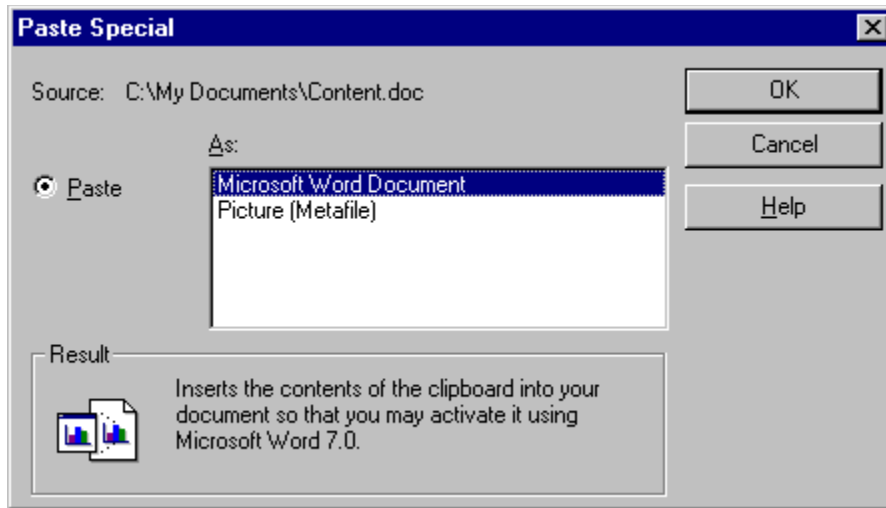

[Edit menu](#)

## Paste Special

Edit menu

Pastes the object that's on the Clipboard into your *i publish* document in the format you choose.

[Click the picture below for details about each option.](#)

### More Information

#### How do you...

- [Embed an existing document](#)
- [Embed a new, empty object](#)
- [Edit an embedded object](#)

#### Concepts

- [What is OLE?](#)

Paste Special dialog box—Source text

Displays the name of the document that contains the information you copied.

Paste Special dialog box—Paste radio button

Click this to embed the copied information into your document.

Changes you make to the embedded information will not appear in the original document, and future changes to the original document will not appear in your *i publish* document.

Paste Special dialog box—As list box

Lets you select how the information is pasted into your document.

**Note:** This option is not available for all types of documents.

Paste Special dialog box—Results static text

Describes what effect the current settings will have.

Paste Special dialog box—OK button

Embeds the object in your *i publish* document using the current settings.

## Find

Edit menu

Searches for the text you specify from within the entire document or the currently highlighted text.

**Click the picture below for details about each option.**

### More Information

#### How do you...

- Find text in your document
- Search specific text only
- Search more efficiently

Find dialog box—Find combo box

Type the characters or words you want to search for. If you've used Find before, click the down arrow to choose the text from the list.

Find dialog box—Match Case checkbox

If you want *i publish* to find words that exactly match the upper and lower case letters that you type, click Match Case to add a checkmark.

Find dialog box—Find Whole Words Only checkbox

If you want *i publish* to treat the text you typed as a whole word, click Find Whole Words Only to add a checkmark. For example, if you typed **let**, *i publish* finds all occurrences of **let**, but does not find **lettuce**.

Find dialog box—Find Next button

Searches your *i publish* document for the next occurrence of the text you typed.

## Replace

Edit menu

Searches for the text you specify from within the entire document or the currently highlighted text, and then replaces it with the text you typed.

[Click the picture below for details about each option.](#)

The image shows a 'Replace' dialog box with a blue title bar and a close button (X) in the top right corner. The dialog is divided into two main sections: 'Find What' and 'Replace With'. Each section has a text input field and a dropdown arrow button. To the right of these fields are buttons for 'Find Next', 'Cancel', 'Replace', and 'Replace All'. At the bottom left, there are two checkboxes: 'Match Case' and 'Find Whole Words Only'. A 'Help' button is located at the bottom right.

Find What:	<input type="text"/>	Find Next
	<input type="text"/>	Cancel
Replace With:	<input type="text"/>	Replace
	<input type="text"/>	Replace All
<input type="checkbox"/> Match Case		Help
<input type="checkbox"/> Find Whole Words Only		

### More Information

#### How do you...

- [Find and replace text in your document](#)
- [Search for straight quotes and replace them with curly quotes](#)
- [Search specific text only](#)
- [Search more efficiently](#)

The rest of the popups are the same as the Find dialog box

Replace dialog box—Replace edit box

Type the characters or words you want *i publish* to insert whenever it finds what you typed in the Find box. If you've used Replace before, click the down arrow to choose the text from the list.

To delete occurrences of the text you typed in the Find box, leave the Replace box blank.

Replace dialog box—Replace button

After *i publish* finds the characters or words that match what you typed, click Replace to replace the highlighted text with the text you typed in the Replace box.

Replace dialog box—Replace All button

Replaces all occurrences of the text in the Find box with the text in the Replace box.

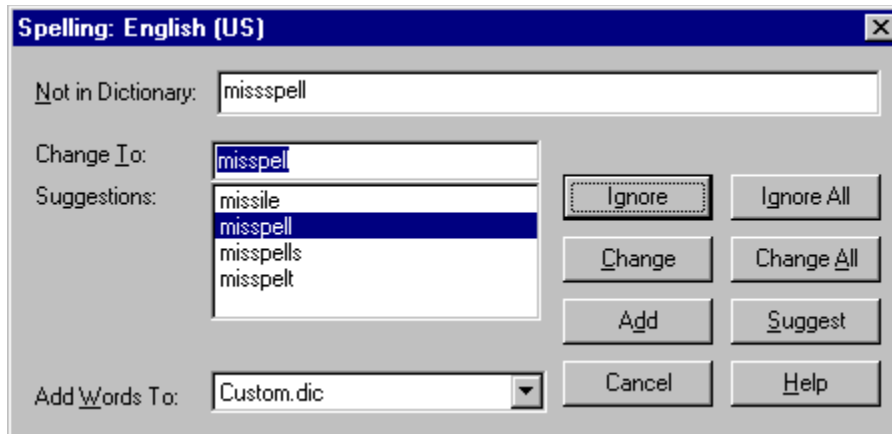

To delete occurrences of the text you typed in the Find box, leave the Replace box blank.

## Spelling

Edit menu

Checks the spelling of your document or the currently highlighted text.

[Click the picture below for details about each option.](#)

### More Information

#### How do you...

- [Check the document for misspellings](#)
- [Change spelling options](#)
- [Change the language dictionary \*i publish\* uses to check spelling](#)

Spelling dialog box—Not in Dictionary edit box

Displays a possible spelling or grammar error, such as a misspelled word, a duplicate word, or incorrect capitalization.

Spelling dialog box—Change To edit box

To replace the word that *i publish* highlighted (listed in the Not In Dictionary box), do one of the following:

- To accept the word in the Change To box, click Change.
  - To use a different word, type it in the Change To box, and then click Change.
- Or, select a word from the Suggestions box, and then click Change.

Spelling dialog box—Suggestions list box

Lists suggested replacement words for the highlighted word. If no words are displayed, click Suggest.

If you want *i publish* to always suggest replacement words without having to click the Suggest button:

1. On the Edit menu, click Options.
2. Click the Spelling tab.
3. Check Always Suggest Spelling Alternatives, and then click OK.

Spelling dialog box—Add Words To combo box

Specifies the current custom dictionary. To add a word that appears in the Not in Dictionary box to the selected custom dictionary, click Add.

By default, *i publish* creates a custom dictionary for you. You can change the custom dictionary:

1. On the Edit menu, click Options.
2. Click the Spelling tab.
3. Under Personal Dictionary, click Browse. Locate your custom dictionary, and then click OK.

Spelling dialog box—Ignore button

To leave a word in the Not In Dictionary box unchanged, click Ignore.

Spelling dialog box—Ignore All button

To leave all instances of the word in the Not In Dictionary box unchanged, click Ignore All.

Spelling dialog box—Change button

To change the word in the Not In Dictionary box to the word in the Change To box, click Change.

Spelling dialog box—Change All button

To change all instances of the word in the Not In Dictionary box to the word in the Change To box, click Change All.

Spelling dialog box—Add button

To add the word in the Not In Dictionary box to the selected custom dictionary, click Add.

To change the custom dictionary:

1. On the Edit menu, click Options.
2. Click the Spelling tab.
3. Under Personal Dictionary, click Browse. Locate your custom dictionary, and then click OK.

Spelling dialog box—Suggest button

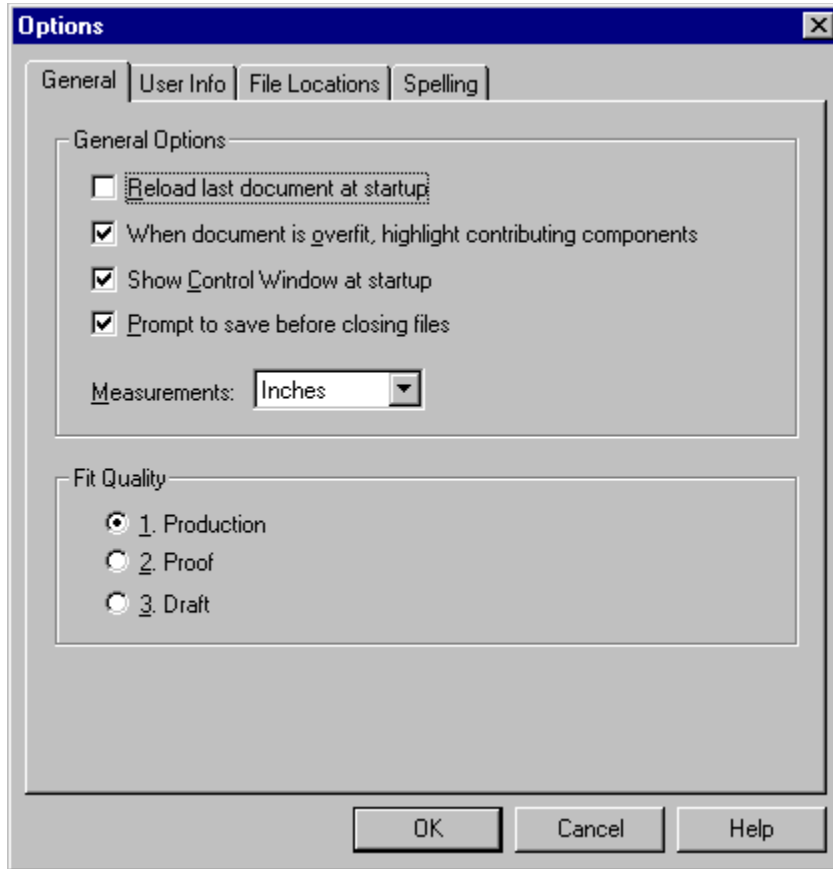

To display a list of alternatives for a misspelled word, click Suggest.

## Options (General tab)

Edit menu

Displays options you can use to customize *i publish*.

Click the picture below for details about each option.  
To display options on a different tab, click that tab in the picture.

### More Information

#### How do you...

##### General tab

- Automatically open the last document you worked on when you start *i publish*
- Change your unit of measurement to inches or centimeters
- See if you have too much text or too many pictures

##### User Info tab

- Edit user or company information

##### File Locations tab

- Set the default file locations

##### Spelling tab

- Change spelling options
- Change the language dictionary *i publish* uses to check spelling

Options dialog box (General tab)—Reload last document at startup

Specifies that when you open *i publish*, the last document you worked on is automatically opened for you.

Options dialog box (General tab)—When document is overfit...

Places a red box around components that may be contributing to the document's overfit. Edit one or more of these components, and then see if your text or pictures fit better on the page.

Options dialog box (General tab)—Show Control Window At Startup

Specifies that when you open *i publish*, the control window (screen left) is visible.

Options dialog box (General tab)—Prompt to save before closing files

Specifies that when you close a document, *i publish* asks you if you want to save your changes first.

### Options dialog box (General tab)—Fit Quality

Specifies how precisely *i publish* fits the text and pictures on the page.

- **Production** precisely fits everything on the page. (Note: This option may make page layout slower.)
- **Proof** lays out your page faster than Product, but slower than Draft.
- **Draft** lays out the page quickly, but isn't as precise as Production or Proof.

**Options dialog box (General tab)—Measurements**

Specifies whether the Tabs box (Design menu) shows your tab stops in inches or centimeters.

## Options (User Info tab)

Edit menu

Displays options you can use to customize *i publish*.

Click the picture below for details about each option.  
To display options on a different tab, click that tab in the picture.

The screenshot shows the 'Options' dialog box with the 'User Info' tab selected. The dialog has a title bar with 'Options' and a close button. Below the title bar are four tabs: 'General', 'User Info', 'File Locations', and 'Spelling'. The 'User Info' tab is active, showing several text input fields: 'Name:', 'Address:', 'Phone:', 'FAX:', 'E-mail:', 'Web Site:', 'Company:', 'Tagline:', 'Title:', and 'Image File:'. There is a 'Browse...' button next to the 'Image File:' field. At the bottom of the dialog are three buttons: 'OK', 'Cancel', and 'Help'.

### More Information

#### How do you...

##### General tab

- Automatically open the last document you worked on when you start *i publish*
- Change your unit of measurement to inches or centimeters
- See if you have too much text or too many pictures

##### User Info tab

- Edit user or company information

##### File Locations tab

- Set the default file locations

##### Spelling tab

- Change spelling options
- Change the language dictionary *i publish* uses to check spelling

Options dialog box (User Info tab)—Name

Type your name.

Options dialog box (User Info tab)—Address

Type your address.

## Options dialog box (User Info tab)—Phone

Type your area code and phone number without spaces, dashes, or parentheses.

Options dialog box (User Info tab)—FAX

Type your area code and FAX number without spaces, dashes, or parentheses.

Options dialog box (User Info tab)—Email

Type your email address, such as YourName@InternetProvider.com

## Options dialog box (User Info tab)—Web Site

The screenshot shows the 'Options dialog box' with the 'User Info' tab selected. The 'Web Site' section is highlighted in blue. It contains a 'Web Site' text box with the value 'http://www.muhimbi.com' and a 'Web Site Title' text box with the value 'Muhimbi - Web Site'. Below these are two checkboxes: 'Show Web Site' (checked) and 'Show Web Site Title' (checked). At the bottom of the dialog is a 'Cancel' button.

Section	Field	Value
Web Site	Web Site	http://www.muhimbi.com
	Web Site Title	Muhimbi - Web Site
	Show Web Site	checked
	Show Web Site Title	checked
Buttons		
Cancel		

Type your Company's Web Site address, such as <http://www.design-intelligence.com/>

## Options dialog box (User Info tab)—Company

Company name	<input type="text" value="Company"/>
Company address	<input type="text" value="Company address"/>
Company phone	<input type="text" value="Company phone"/>
Company fax	<input type="text" value="Company fax"/>

Company display font	<input type="text" value="Company display font"/>
Company display style	<input type="text" value="Company display style"/>
Company display theme	<input type="text" value="Company display theme"/>
Company display language	<input type="text" value="Company display language"/>
Company display encoding	<input type="text" value="Company display encoding"/>
Company display character set	<input type="text" value="Company display character set"/>
Company display collation	<input type="text" value="Company display collation"/>
Company display sort order	<input type="text" value="Company display sort order"/>

Type your Company name.

Options dialog box (User Info tab)—Tagline

Type your Company's tagline. For example, the *i publish* tagline is:  
Write once, publish anywhere . . . automatically.™

Options dialog box (User Info tab)—Title

Type your title, such as Director of Operations.

Options dialog box (User Info tab)—Image File

Type the path and file name for the file that contains your company's logo. Or to find the file, click Browse.

Options dialog box (User Info tab)—Browse button

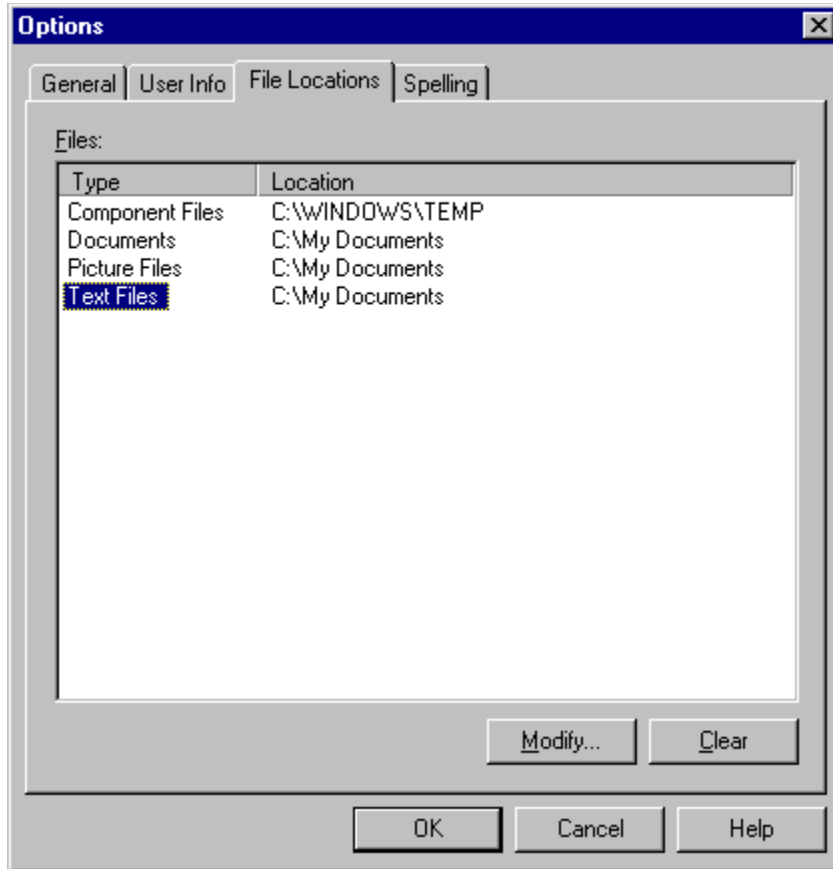

Opens a box in which you can find your company's logo file.

## Options (File Locations tab)

Edit menu

Displays options you can use to customize *i publish*.

Click the picture below for details about each option.  
To display options on a different tab, click that tab in the picture.

### More Information

#### How do you...

##### General tab

- Automatically open the last document you worked on when you start *i publish*
- Change your unit of measurement to inches or centimeters
- See if you have too much text or too many pictures

##### User Info tab

- Edit user or company information

##### File Locations tab

- Set the default file locations

##### Spelling tab

- Change spelling options
- Change the language dictionary *i publish* uses to check spelling

### Options dialog box (File Locations tab)—Type

Specifies where *i publish* looks for custom components, picture files, and text files, and where *i publish* saves your documents:

- Component Files—Specifies the folder that *i publish* opens when you look for components that you saved for use in other *i publish* documents.
- How do you create your own intelligent component?
- How do you add an intelligent component that you created?
- Documents—Specifies the folder where *i publish* saves your documents.
- Picture Files—Specifies the folder that *i publish* opens when you look for picture files.
- Text Files—Specifies the folder that *i publish* opens when you look for text files.

### Options dialog box (File Locations tab)—Location

Specifies the current folder in which *i publish* looks for your pictures, text files, and custom components, and where *i publish* saves your documents.

Options dialog box (File Locations tab)—Modify button

Click a file type, and then click Modify to change the location.

Options dialog box (File Locations tab)—Clear button

Removes the currently specified location for the selected file type. To specify a new location, click Modify.

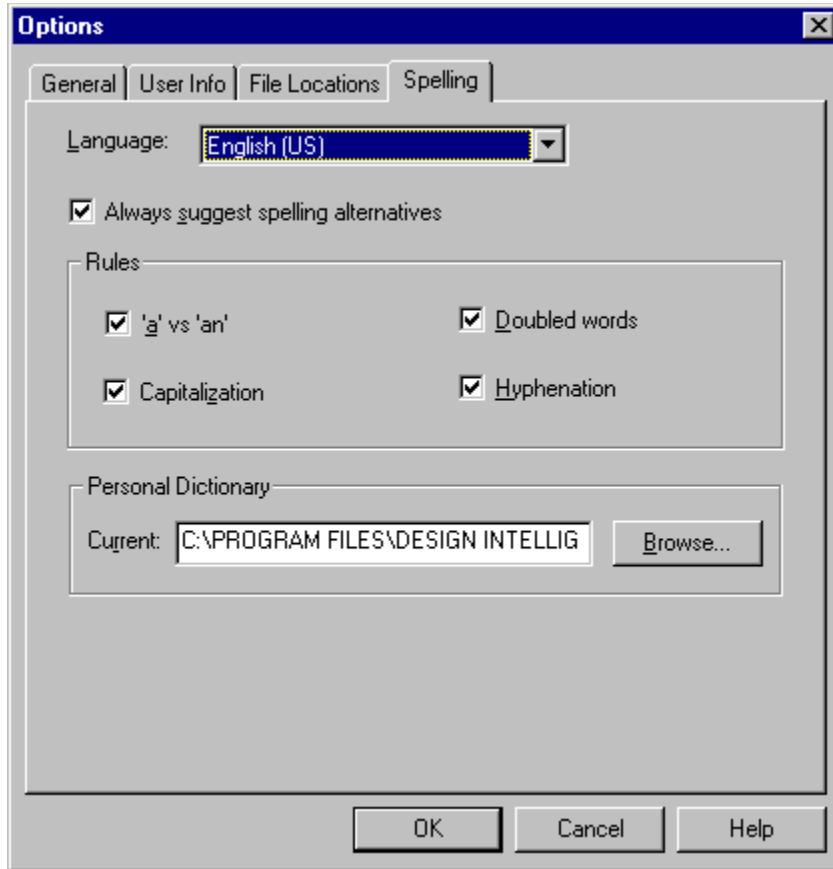

## Options (Spelling tab)

Edit menu

Displays options you can use to customize *i publish*.

Click the picture below for details about each option.  
To display options on a different tab, click that tab in the picture.

## More Information

### How do you...

#### General tab

- Automatically open the last document you worked on when you start *i publish*
- Change your unit of measurement to inches or centimeters
- See if you have too much text or too many pictures

#### User Info tab

- Edit user or company information

#### File Locations tab

- Set the default file locations

#### Spelling tab

- Change spelling options
- Change the language dictionary *i publish* uses to check spelling

### Options dialog box (Spelling tab)—Language

Sets the language dictionary that *i publish* uses to check the spelling of your document.

Options dialog box (Spelling tab)—Suggest

Specifies that *i publish* always suggests spelling alternatives. To speed up checking the spelling of your document, you can uncheck this option.

Options dialog box (Spelling tab)—a vs. an

Specifies that if *i publish* finds an "a" when you should use an "an" (or vice versa), *i publish* lets you know while you're checking the spelling of your document. For example, *i publish* finds "Have a apple."

## Options dialog box (Spelling tab)—Capitalization

Specifies that if *i publish* finds a word that may need to change to lower case or upper case, *i publish* lets you know while you're checking the spelling of your document. For example, *i publish* finds "Let's go to mexico!"

### Options dialog box (Spelling tab)—Doubled words

Specifies that if *i publish* finds two of the same words in a row, such as "the the", *i publish* lets you know while you're checking the spelling of your document.

Specifies that if *i publish* finds incorrectly hyphenated words, such as "h-yphenation", *i publish* lets you know while you're checking the spelling of your document.

## Options dialog box (Spelling tab)—Personal Dictionary

The Personal Dictionary is a list of words that you can add to the dictionary. You can add words to the dictionary by clicking the **Add New Words** button. You can also remove words from the dictionary by clicking the **Remove All** button.

The Personal Dictionary is a list of words that you can add to the dictionary. You can add words to the dictionary by clicking the **Add New Words** button. You can also remove words from the dictionary by clicking the **Remove All** button.

The Personal Dictionary is a list of words that you can add to the dictionary. You can add words to the dictionary by clicking the **Add New Words** button. You can also remove words from the dictionary by clicking the **Remove All** button.

Specifies where your current personal dictionary is stored. To change the current dictionary, click Browse and then find the dictionary you want.

**(Note:** Personal dictionaries end in .dic)

Options dialog box (Spelling tab)—Browse

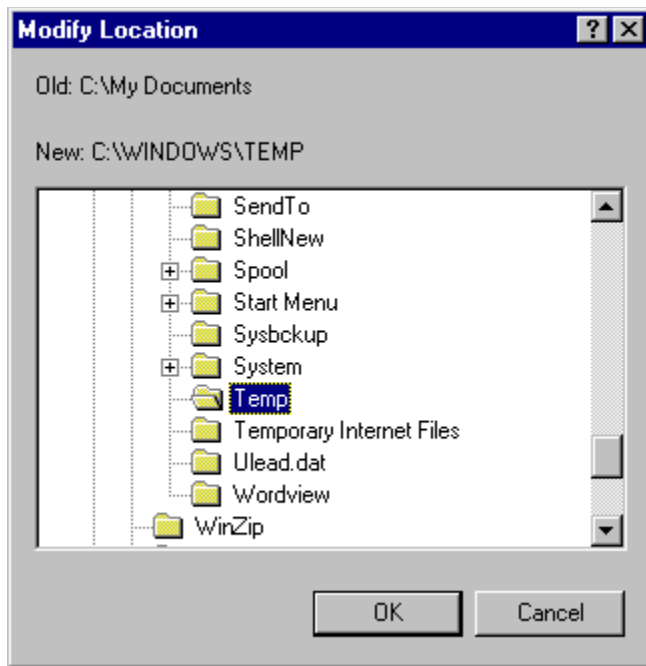

Opens a box in which you can find the personal dictionary you want to use.

**(Note:** Personal dictionaries end in .dic)

- **Modify Location**

Sets the default folder *i publish* uses.

Click the picture below for details about each option.

**More Information**

How do you...

- Set the default file locations

### Modify Location dialog box—Old

Lists the folder where *i publish* looked for your files, before you changed the folder.

**Modify Location dialog box—New**

Click the new folder that you want *i publish* to use.

To open a folder, double-click it.

Modify Location dialog box—OK

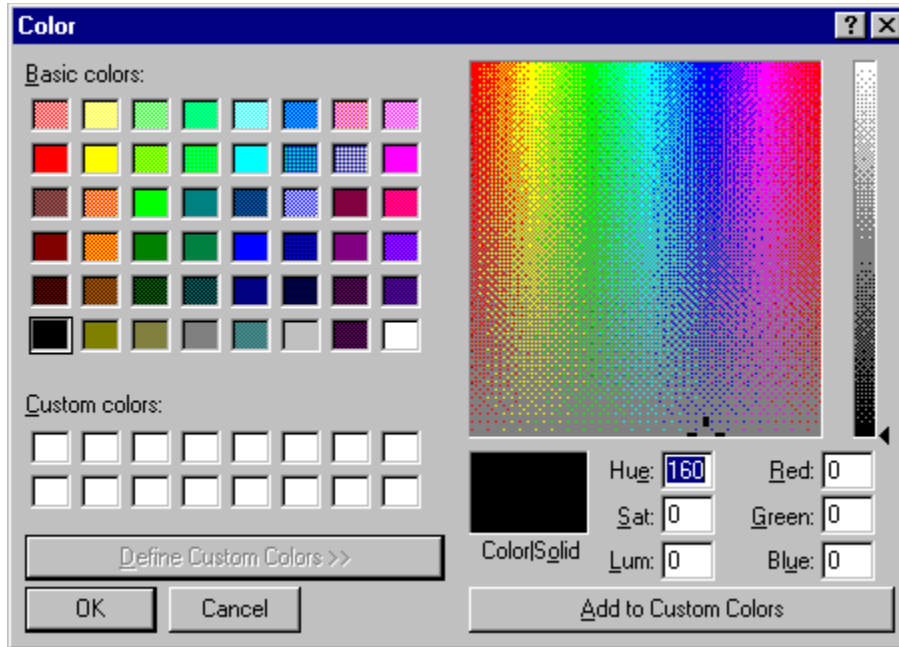

Sets the new folder location you've specified for where *i publish* will look for your files.

## Edit Color

Specifies a new color to use in *i publish*. You can either use one of the "basic colors," or click Define Custom Colors to add other colors to the palette.

Click the picture below for details about each option.

## More Information

### How do you...

- Create a custom color

## Edit Color dialog box—Basic Colors

Shows the "basic colors" available.

To define a custom color, click a basic color that is similar, and then click Define Custom Colors.

To use a color in *i publish*, click any color tile, and then click OK.

**Edit Color dialog box—Custom Colors**

Displays any custom colors you have already defined.

To change a custom color, click its color tile, and then specify different settings.

To define a new custom color, click an empty custom color tile, specify a different color, and then click Add To Custom Colors.

To use a color in *i publish*, click any color tile, and then click OK.

**Edit Color dialog box—Define Custom Colors button**

Displays more of the Color box, in which you can define a custom color.

If this button is unavailable, you are already viewing the custom color area.

To define a custom color, click in the color matrix. Or, specify the color by typing values in the hue/saturation/luminosity or the red/green/blue (RGB) boxes. Then, click Add To Custom Colors.

## Edit Color dialog box—Color Wheel

Shows a color matrix. To define a custom color, click anywhere in this matrix, and then use the white to gray slider (to the right of the color matrix) to adjust the color's attributes.

**Edit Color dialog box—White to Black slider**

Adjusts the amounts of white and black in the selected color. To change the color, drag the slider arrow up or down.  
The result of your choice is displayed in the Color/Solid box.

## Edit Color dialog box—Color/Solid box

If you're running in 256 colors, the color on the left shows the amount of white and black in the color you specified. The color on the right shows how the color will look if you set 100% of the color with no white and black.

If you're running at 16-bit or 24-bit, you won't see any difference between the two colors.

To adjust the color, use the slider at the right of the color matrix. To specify that you want 100% of the color with no white or black, type ALT+O.

**Edit Color dialog box—Hue**

Specifies the hue for the selected custom color. A combination of hue/saturation, and luminosity can be used to define any color.

Hue is the value of a color wheel, where 0 is red, 60 is yellow, 120 is green, 180 is cyan, 200 is magenta, and 240 is blue.

The easiest way to experiment with different colors is to click the color matrix.

**Edit Color dialog box—Sat**

Specifies the saturation level for the selected custom color. A combination of hue/saturation, and luminosity can be used to define any color.

Saturation is the amount of color in a specified hue, up to a maximum of 240.

The easiest way to experiment with different colors is to click the color matrix.

### Edit Color dialog box—Lum

Specifies the luminosity of the selected custom color. A combination of hue, saturation, and luminosity can be used to define any color.

Luminosity is the brightness of the color.

The easiest way to experiment with different colors is to click the color matrix.

Edit Color dialog box—Red

Specifies the amount of red in the selected custom color. A combination of red, green, and blue values can be used to define any color.

The easiest way to experiment with different colors is to click the color matrix.

Edit Color dialog box—Green

Specifies the amount of green in the selected custom color. A combination of red, green, and blue values can be used to define any color.

The easiest way to experiment with different colors is to click the color matrix.

**Edit Color dialog box—Blue**

Specifies the amount of blue in the selected custom color. A combination of red, green, and blue values can be used to define any color.

The easiest way to experiment with different colors is to click the color matrix.

Edit Color dialog box—Add To Custom Colors

Adds the custom color displayed in the Color/Solid box to the Custom Colors palette.  
To use this color in *i publish*, click its color tile, and then click OK.

Edit Color dialog box—OK

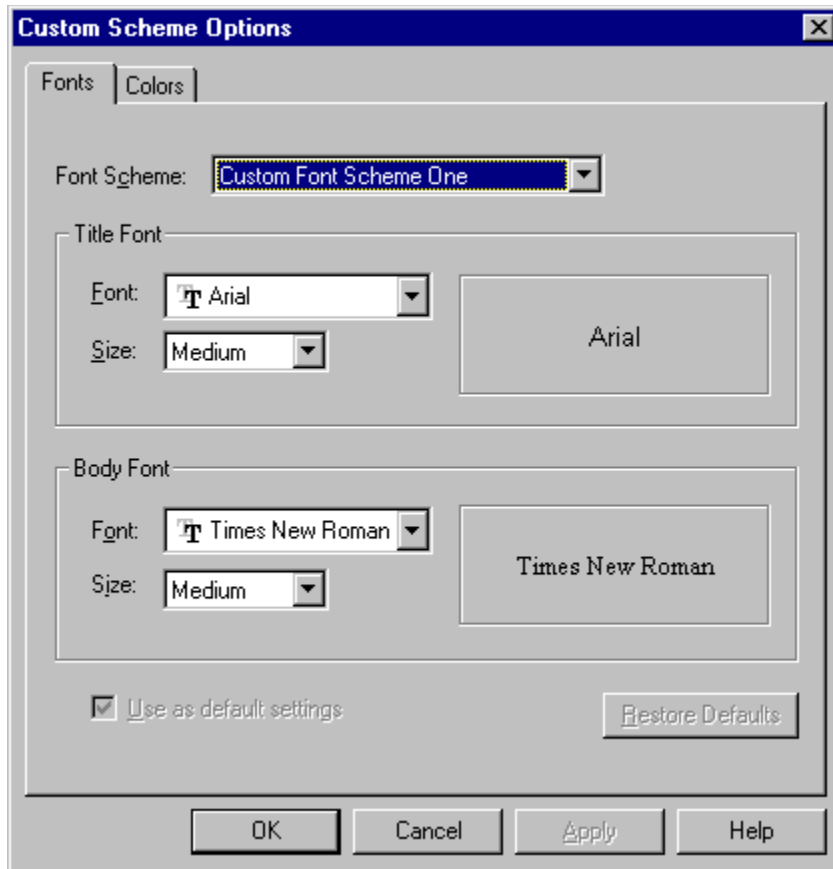

Applies the selected color in *i publish*.

## Custom Schemes (Fonts tab)

Edit menu

Displays options for creating your own custom color and font schemes.

Click the picture below for details about each option.  
To display options on a different tab, click that tab in the picture.

## More Information

### How do you...

- [Set up your own color scheme](#)
- [Set up your own font scheme](#)
- [Apply your own color scheme](#)
- [Apply your own font scheme](#)
- [Add a corporate color or font scheme standard to all copies of \*i publish\*](#)

Custom Schemes dialog box (Fonts tab)—Custom Fonts Scheme title

Shows the currently selected font scheme. You can create two different custom font schemes.

- How do you set up your own font scheme?
- How do you apply your own font scheme?

## Custom Schemes dialog box (Fonts tab)—Font Size

Sets the font size to Small, Medium, or Large.

To use a different size, click the box, and then click the size you want.

**Tip:** Typically, you would choose Large for the Title Font and Medium for the Body Font. You may need to experiment until you get the results you want.

Custom Schemes dialog box (Fonts tab)—Font face static text

Shows a sample of the selected font.

## Custom Schemes dialog box (Fonts tab)—Font box

Shows your current custom font choice.

To use a different font, click the box, and then click a different font. You can use any font on your system.

## Custom Schemes dialog box (Fonts tab)—Title Font

Specifies the font (listed below) that will be used for Titles.

## Custom Schemes dialog box (Fonts tab)—Body Font

Specifies the font (listed below) that will be used for Body text.

Custom Schemes dialog box (Fonts tab)—Restore Defaults button

If this button is available, then the document you opened uses a custom font scheme that is different from your own custom font schemes. (Probably the document was created or edited by someone else.)

**To do this:**

Leave the document as is.

Remove the custom font scheme and use your own custom font scheme instead.

Make the document's font scheme your own custom font scheme.

**Do this:**

Click OK.

Click Restore Defaults, and then click OK.

Click Use As Default Settings, and then click OK.

Custom Schemes dialog box (Fonts tab)—Use As Default Settings button

If this button is available, then the document you opened uses a custom font scheme that is different from your own custom font schemes. (Probably the document was created or edited by someone else.)

**To do this:**

Leave the document as is.

Remove the custom font scheme and use your own custom font scheme instead.

Make the document's font scheme your own custom font scheme.

**Do this:**

Click OK.

Click Restore Defaults, and then click OK.

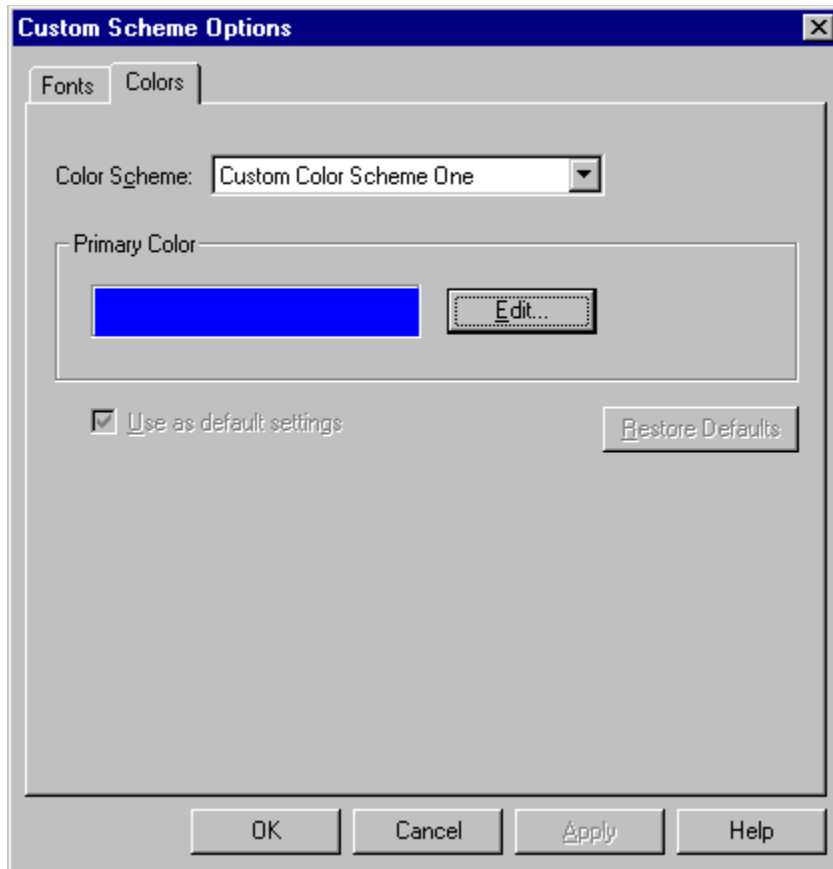

Click Use As Default Settings, and then click OK.

## Custom Schemes (Colors tab)

Edit menu

Displays options for creating your own custom color and font schemes.

Click the picture below for details about each option.  
To display options on a different tab, click that tab in the picture.

## More Information

Click Use As Default Settings, and then click OK.

Custom Schemes dialog box (Colors tab)—Use As Default Settings button

If this button is available, then the document you opened uses a custom color scheme that is different from your own custom color schemes. (Probably the document was created or edited by someone else.)

**To do this:**

Leave the document as is.

Remove the custom color scheme and use your own custom color scheme instead.

Make the document's color scheme your own custom color scheme.

**Do this:**

Click OK.

Click Restore Defaults, and then click OK.

Click Use As Default Settings, and then click OK.

View menu—None

Navigate menu—None

Insert menu

### Locate File

The button or menu option you clicked is looking for the *i publish* CD (compact disc). Insert the CD, and then click OK.

Click the picture below for details about each option.

### More Information

#### How do you...

- Find a file
- Add your picture from a disk (hard, floppy, or CD-ROM) so text wraps around it
- Add your picture from a disk (hard, floppy, or CD-ROM) into a picture component

### Locate File dialog box—Location

Specifies where *i publish* is looking for the file. To change the location, click Browse.

Locate File dialog box—Browse

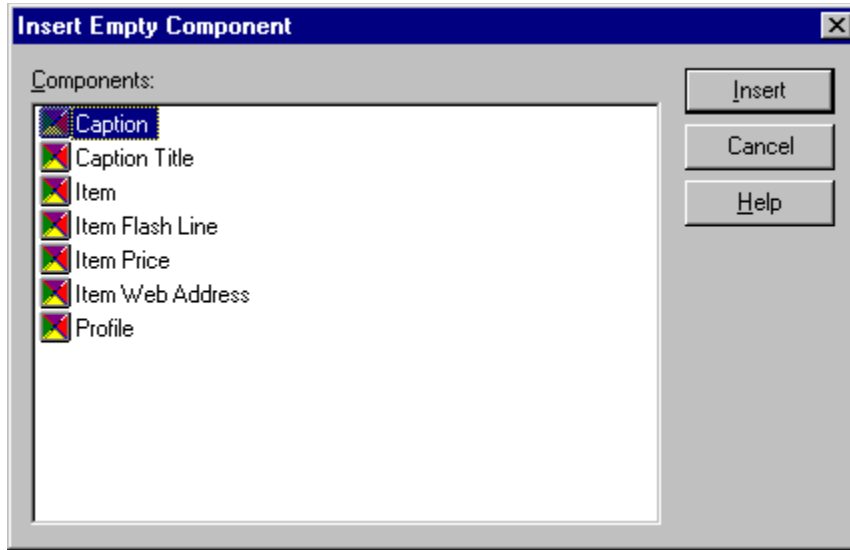

Opens a dialog box in which you can locate the *i publish* CD.

## Insert Component

Design menu

Displays a list of *i publish* components that you can insert. Click the one you want, click Insert, and then add text or pictures to the component.

Click the picture below for details about each option.

### More Information

#### How do you...

- Add a new component

#### Concepts

- What's an intelligent component?

Insert **Component** dialog box—Show Components For

Lists all components that are part of the currently selected component in the Show Components For box.  
To add a component, click its name, and then click Insert.

Insert Components dialog box—Show Components For

If you don't see the component you're looking for in the list, click Show Components For, and then click a different component to see its sub-components.

Insert Components dialog box—Insert button

Inserts the currently selected component into your document. *i publish* places it in your document based on the current layout.

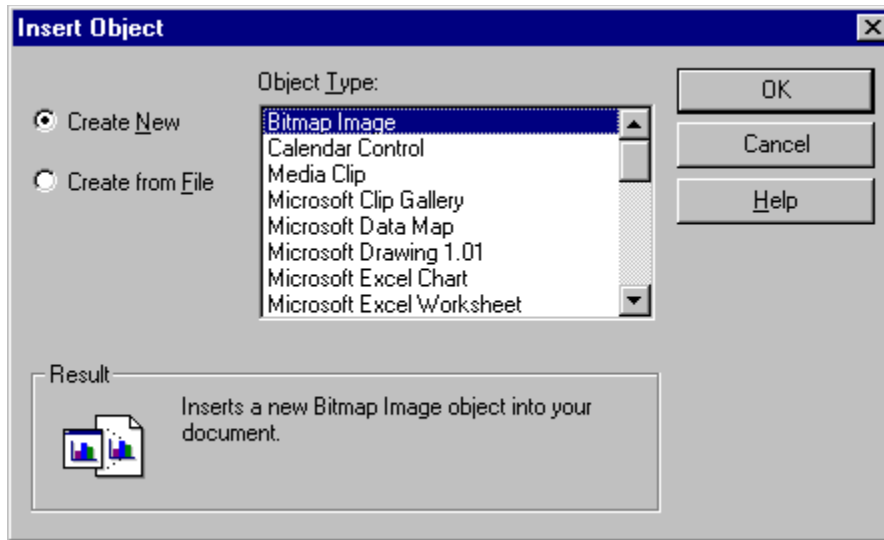

## OLE Object

Insert menu

Embeds an OLE object in *i publish*. You can embed a new empty object or an existing file.

[Click the picture below for details about each option.](#)

### More Information

#### How do you...

- [Embed an existing document](#)
- [Embed a new, empty object](#)
- [Edit an embedded object](#)

#### Concepts

- [What is OLE \(object linking and embedding\)?](#)

### OLE Object dialog box—Create New

Specifies to create a new object and embed it into the open *i publish* document.

*i publish* will embed the object, then you can enter information into it.

### OLE Object dialog box—Create From File

Specifies to embed all or part of an existing file in the open *i publish* document.

## OLE Object dialog box—Object Type

Lists the types of files that can be embedded.

## OLE Object dialog box—Result

Describes the type of file you are embedding.

OLE Object dialog box—OK

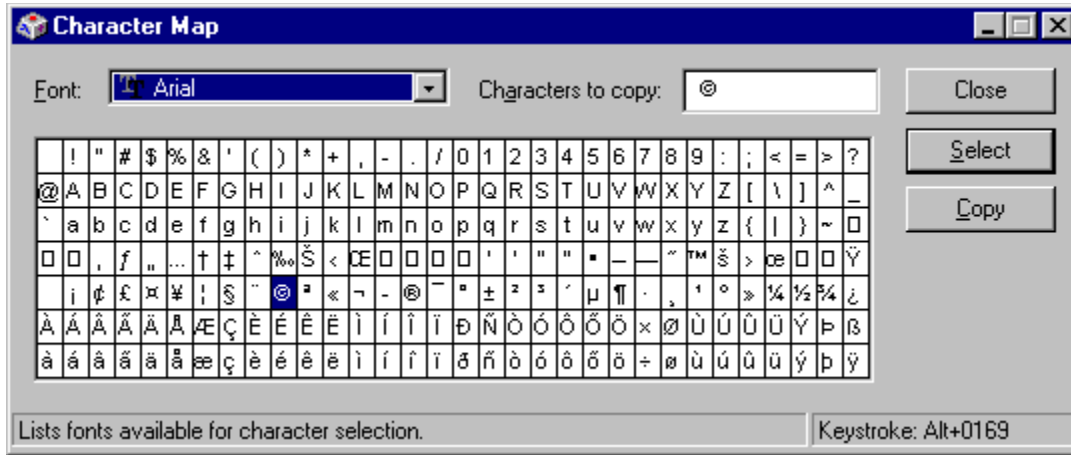

Embeds the object into your document using the settings you specified.

## Symbol (Character Map)

Insert menu

Inserts a special character or symbol (¼, ½, ä, ™, ©...) at the current location of the insert point in your document. You need to select a text component before you can insert a symbol.

[Click the picture below for details about each option.](#)

### More Information

#### How do you...

- Add a special character or symbol

Symbol dialog box—Font combo box

Specifies the font whose characters and symbols you want to choose from.

Symbol dialog box—Characters to copy edit box

Displays the characters you have selected for copying.

Symbol dialog box—List of characters to insert

Displays the characters and symbols available for the selected font.

Symbol dialog box—Select button

Adds the selected character to the Characters To Copy box.

Symbol dialog box—Copy button

Copies the characters that are in the Characters To Copy box.

You need to click this before you can paste these characters into your *i publish* document.

Symbol dialog box—status bar

Lists how to insert the selected symbol using the keyboard. This is a useful method if you often need to insert a particular symbol.

For example, to insert the symbol ©:

1. Make sure Num Lock is on.
2. Hold down the ALT key while pressing 0169 on the numeric keypad.

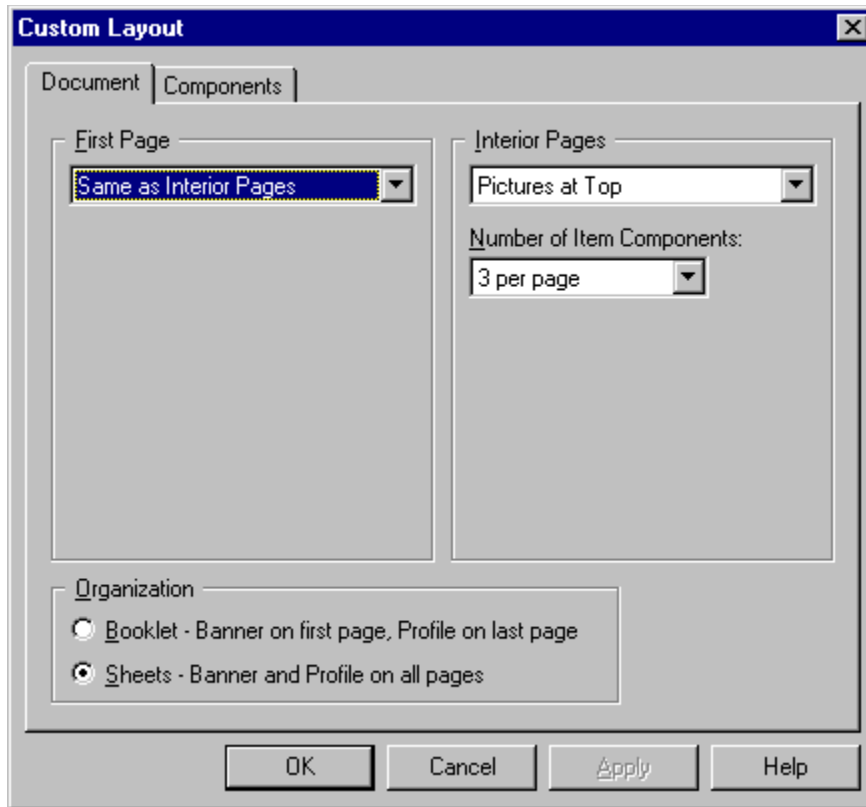

Design menu

## Custom Layout—Catalog Group (Document tab)

Design menu, Layouts option

Changes the layout of your document.

Click the picture below for details about each option.  
To display options on a different tab, click that tab in the picture.

### More Information

#### How do you...

- Change the layout of the entire document
- Change the layout and look of your Web page
- Change the layout and look of your onscreen presentation

Custom Layout—Catalog Group (Document tab)—**Organization**

Specifies whether you are creating a booklet or individual sheets.

- If you choose Booklet, *i publish* adds a Banner component to the first page, and puts a Profile component on the last page.
- If you choose Sheets, *i publish* adds a Banner component and a Profile component to each page.

Custom Layout—Catalog Group (Document tab)—Interior Pages

Specifies the layout, for example:

Pictures  
At Top

Pictures  
Along Side

Custom Layout—Catalog Group (Document tab)—Number of Item Components

Specifies the number of Item components per page.

Specifies whether the first page is different from the rest of the pages.

- **Same as Interior Pages**—Uses the same layout for all pages in your document.
- **Cover Page**—Makes the first page a cover page, and uses a different layout for the rest of the pages.
- **Single Large Picture**—Places a large picture and text on the first page, and uses a different layout for the rest of the pages.
- **First Picture Emphasized**—Places one large picture and one small picture on the first page, and uses a different layout for the rest of the pages.

Custom Layout—Catalog Group (Document tab)—OK

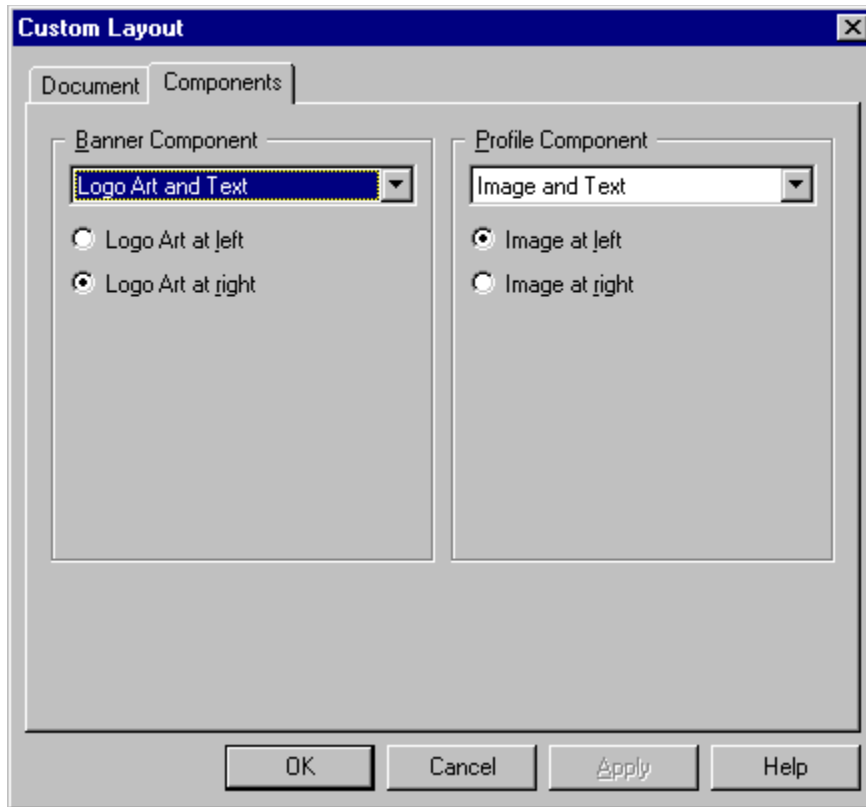

Closes the dialog box and applies your settings.

## Custom Layout—Catalog Group (Component tab)

Design menu, Layouts option

Changes the layout of your document.

Click the picture below for details about each option.  
To display options on a different tab, click that tab in the picture.

### More Information

#### How do you...

- Change the layout of the entire document
- Change the layout and look of your Web page
- Change the layout and look of your onscreen presentation

Custom Layout—Catalog Group (Component tab)—**Banner Component**

Sets the location of logo art in your Banner component, and whether the Banner contains just logo art, or logo art and text.

Custom Layout—Catalog Group (Component tab)—[Profile Component](#)

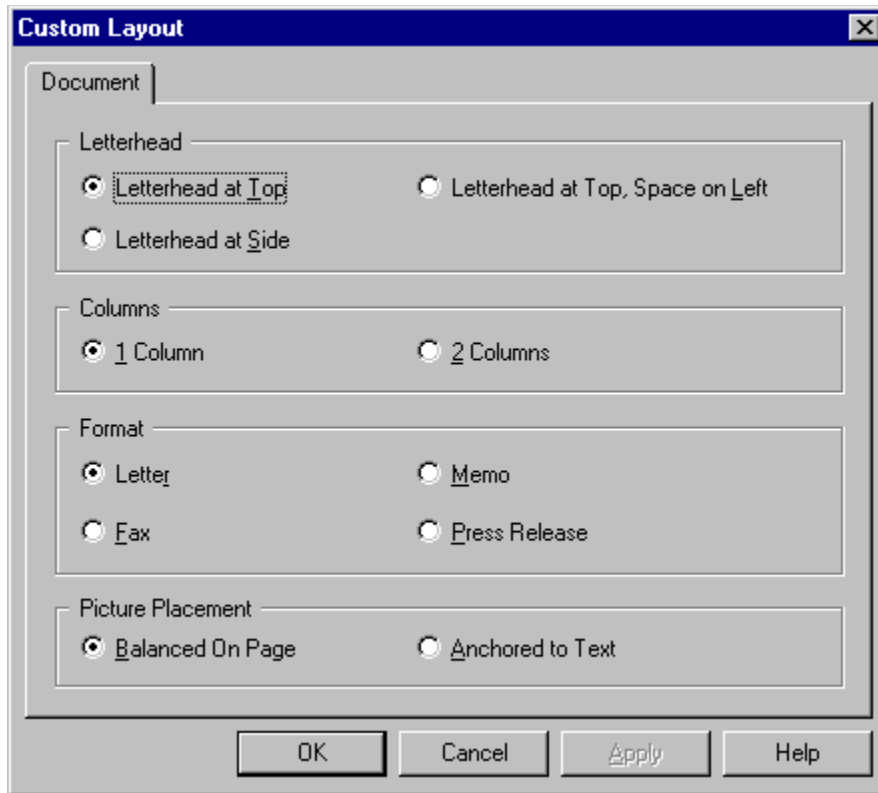

Sets the location of the image in your Profile component, and whether the Profile contains just an image or an image and text.

## Custom Layout—Correspondence Group

Design menu, Layouts option

Changes the layout of your document.

[Click the picture below for details about each option.](#)

### More Information

#### How do you...

- [Change the layout of the entire document](#)
- [Change the layout and look of your Web page](#)
- [Change the layout and look of your onscreen presentation](#)

Custom Layout—Correspondence Group—Letterhead Layout

Specifies where the letterhead appears, and whether you have extra white space on the left side of your document.  
For example:

Letterhead at  
Top

Letterhead at  
Side

Letterhead at  
Top, Space on  
Left

Specifies the number of columns for the main text (body text) in your document. For example:

1 column

2 columns

Custom Layout—Correspondence Group—**Format**

Specifies whether your document is a letter, fax, memo, or press release.

Custom Layout—Correspondence Group—Picture Placement

Specifies how pictures are placed on the page.

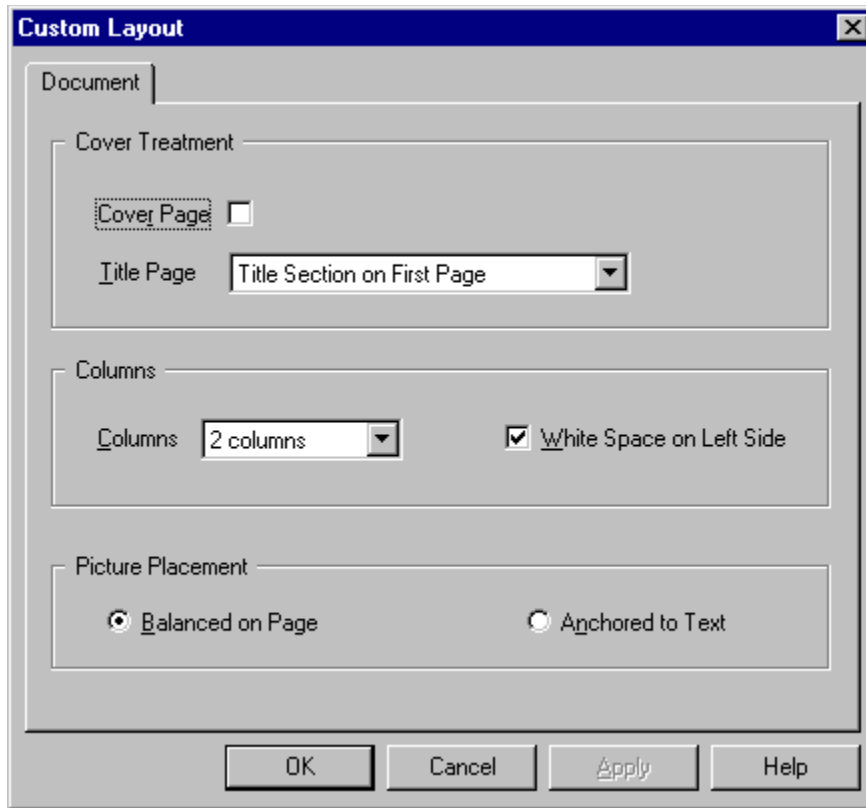

- **Balanced on Page**—Specifies to balance the pictures on the page to create an attractive layout. When you drop a picture on a paragraph, in most cases the picture will appear on the same page as the paragraph, however the picture may not be right next to the text.
- **Anchored to Text**—Specifies that when you drop a picture onto a paragraph, the text will appear next to it. No matter where the text moves in the document, the picture will move with it.

## Custom Layout—Report Group

Design menu, Layouts option

Changes the layout of your document.

[Click the picture below for details about each option.](#)

### More Information

How do you...

- [Change the layout of the entire document](#)
- [Change the layout and look of your Web page](#)
- [Change the layout and look of your onscreen presentation](#)
- [Change the emphasis of a picture](#)

Specifies whether your report has a cover page, title page, or both. There are several layout options for title pages. Experiment until you find the cover treatment you like.

Custom Layout—Report Group—Columns

Specifies the number of columns for your main text. You can choose from 1, 2, 3, or 4 columns of text. For example:

- 1 column
- 2 columns

Custom Layout—Report Group—White Space on Left Side

Specifies to add a column on the left side of the page. The extra column cannot include text, but some pictures may extend into the white space depending on the emphasis setting.

This option is only available for 1-column and 2-column layouts.

2 columns

White Space  
on Left Side

Custom Layout—Report Group—Picture Placement

Specifies how pictures are placed on the page.

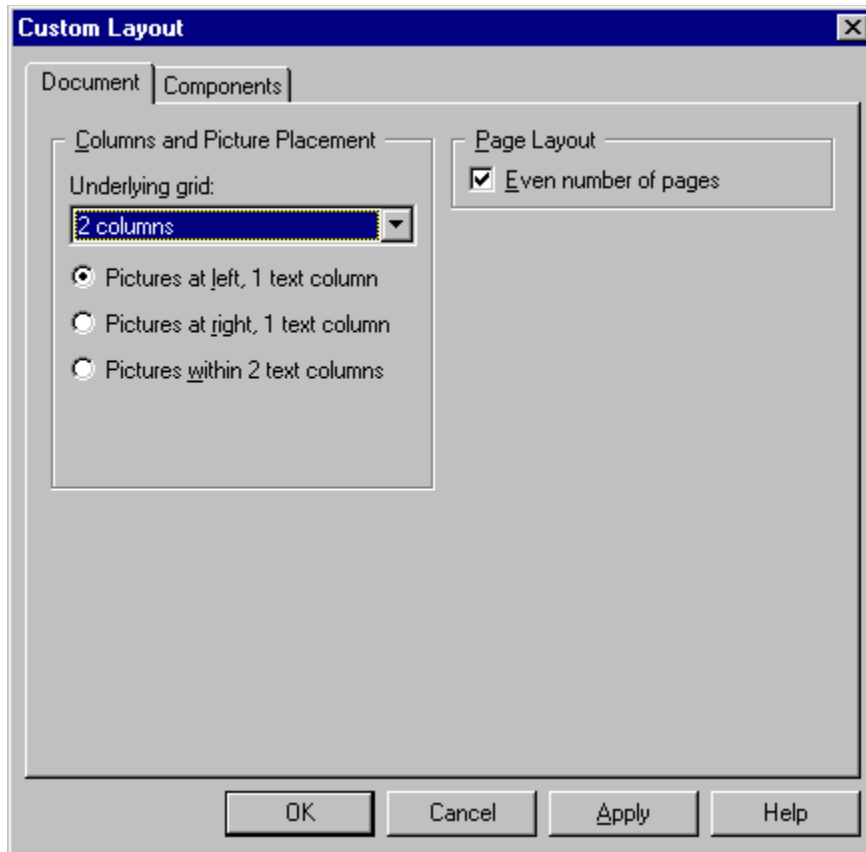

- **Balanced on Page**—Specifies to balance the pictures on the page to create an attractive layout. When you drop a picture on a paragraph, in most cases the picture will appear on the same page as the paragraph, however the picture may not be right next to the text.
- **Anchored to Text**—Specifies that when you drop a picture onto a paragraph, the text will appear next to it. No matter where the text moves in the document, the picture will move with it.

## Custom Layout—Newsletter Group (Document tab)

Design menu, Layouts option

Changes the layout of your document.

[Click the picture below for details about each option.](#)

### More Information

#### How do you...

- [Change the layout of the entire document](#)
- [Change the layout and look of your Web page](#)
- [Change the layout and look of your onscreen presentation](#)
- [Change the emphasis of a picture](#)

Custom Layout—Newsletter Group (Document tab)—**Stories and Columns**

Specifies the number of columns in the underlying grid, the number of text columns, and where pictures are placed on the page.

Think of the underlying grid as vertical lines that split up the page into columns. Text and pictures can span any number of these columns, or there might be columns that are only used for white space.

Experiment with different options until you get the results you want. If you don't like a choice, try another one or press CTRL+Z to undo it.

Custom Layout—Newsletter Group (Document tab)—Page Layout

If you're creating a document that will be copied on both sides of each page, turn on this option.

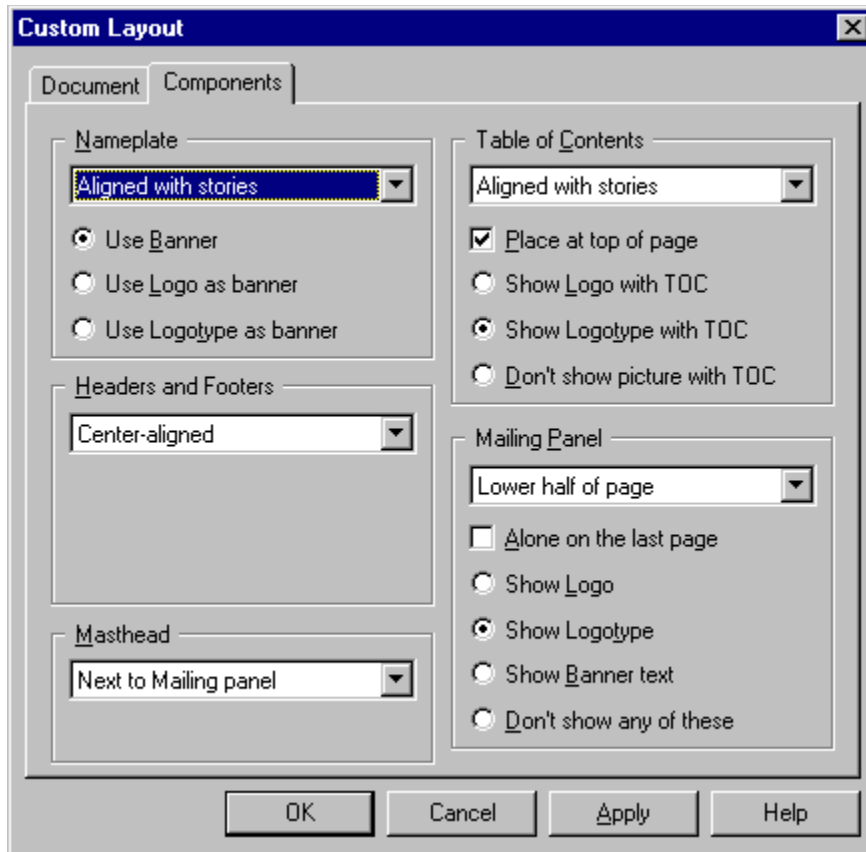

## Custom Layout—Newsletter Group (Component tab)

Design menu, Layouts option

Changes the layout of your document.

[Click the picture below for details about each option.](#)

### More Information

#### How do you...

- [Change the layout of the entire document](#)
- [Change the layout and look of your Web page](#)
- [Change the layout and look of your onscreen presentation](#)
- [Change the emphasis of a picture](#)

Custom Layout—Newsletter Group (Component tab)—Nameplate

Specifies what you want to appear at the top of your newsletter, and the alignment of it in relation to your newsletter text:

Experiment with different options until you get the results you want. If you don't like a choice, try another one or press CTRL+Z to undo it.

**What's does Banner, Logo, and Logotype mean?**

- Banner—Your newsletter's title (text).
- Logo—An image of some kind that represents your newsletter or company.
- Logotype—Text converted to a graphic image, such as the IBM logotype.

Custom Layout—Newsletter Group (Component tab)—[Table of Contents](#)

Specifies whether to show the table of contents, where to place it on the page, and whether to include a logo or logotype in the table of contents.

- To put the table of contents in the same column as the newsletter text, click "Aligned With Stories."
- To make the table of contents span the full width of the page, click "Center-Aligned."
- If you want the table of contents just below your Banner, click "Place at top of page." If you want it at the bottom of the page, uncheck this option.

**What's does Banner, Logo, and Logotype mean?**

- Banner—Your newsletter's title (text).
- Logo—An image of some kind that represents your newsletter or company.
- Logotype—Text converted to a graphic image, such as the IBM logotype.

Custom Layout—Newsletter Group (Component tab)—**Headers and Footers**

Specifies whether to show the headers and footers, the alignment of them in relation to your newsletter text, and whether to include a logo or logotype in the header.

Custom Layout—Newsletter Group (Component tab)—Masthead

Specifies whether to show the masthead, and where it appears on your page.

The masthead is the "credits" section of your newsletter, where you list your writers, editors, illustrators, and so on.

Custom Layout—Newsletter Group (Component tab)—Mailing Panel

Specifies:

- Whether to show the mailing panel.
- Where it appears on your page.
- Whether to include a logo, logotype, or banner.
- Whether it should be the only information on the last page of your newsletter.

**What's does Banner, Logo, and Logotype mean?**

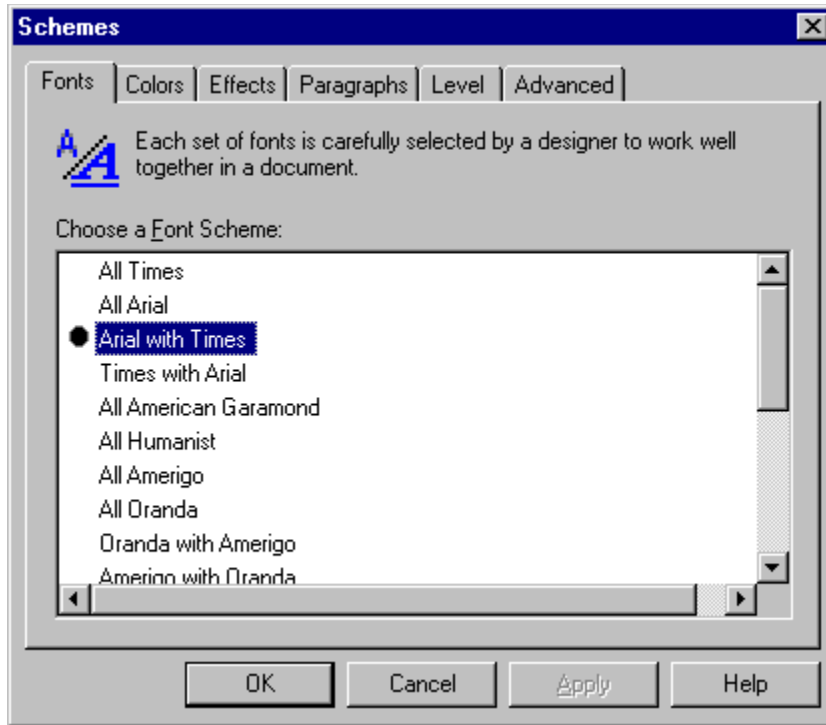

- Banner—Your newsletter's title (text).
- Logo—An image of some kind that represents your newsletter or company.
- Logotype—Text converted to a graphic image, such as the IBM logotype.

## Schemes (Fonts tab)

Design menu

Using the schemes menu option, you can change the font, color, graphic effects, and paragraph schemes for your document. You can also set whether a scheme change affects the entire document, a single component, or multiple components.

Click the picture below for details about each option.  
To display options on a different tab, click that tab in the picture.

Lists all the graphic effects schemes that you can apply to your document.

Experiment—click a scheme, and then click Apply to see if you like the changes. If you don't like a choice, try another one or press CTRL+Z to undo it.

You can apply the selected scheme to the entire document or to a component.

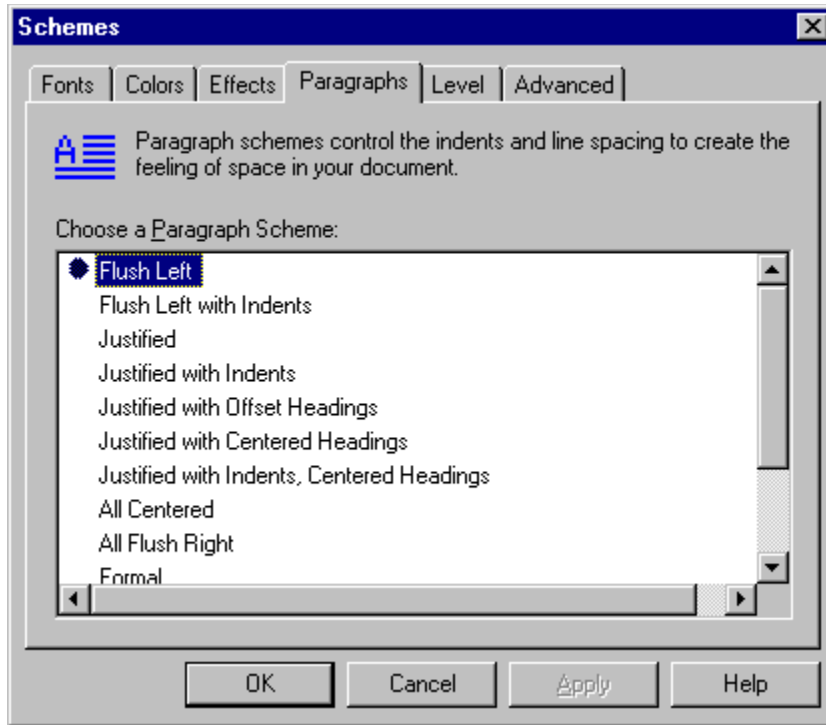

1. Click the Advanced tab.
2. Under Apply To, click what you want to apply the scheme to.

## Schemes (Paragraphs tab)

Design menu

Using the schemes menu option, you can change the font, color, graphic effects, and paragraph schemes for your document. You can also set whether a scheme change affects the entire document, a single component, or multiple components.

Click the picture below for details about each option.  
To display options on a different tab, click that tab in the picture.

## Schemes dialog box (Level tab)—Colors Used

Color	Color Name	Color Value
	Blue	0000FF
	Red	FF0000
	Green	008000
	Yellow	FFFF00
	Cyan	00FFFF
	Magenta	FF00FF
	Black	000000
	White	FFFFFF

Color	Color Name	Color Value
	Blue	0000FF
	Red	FF0000
	Green	008000
	Yellow	FFFF00
	Cyan	00FFFF
	Magenta	FF00FF
	Black	000000
	White	FFFFFF

Color	Color Name	Color Value
	Blue	0000FF
	Red	FF0000
	Green	008000
	Yellow	FFFF00
	Cyan	00FFFF
	Magenta	FF00FF
	Black	000000
	White	FFFFFF

Color	Color Name	Color Value
	Blue	0000FF
	Red	FF0000
	Green	008000
	Yellow	FFFF00
	Cyan	00FFFF
	Magenta	FF00FF
	Black	000000
	White	FFFFFF

Sets what color (and how much color) each component gets:

- The farther to the right you set the slider, the more color is applied.
- The "Off" setting makes the document black and white, no matter what color scheme you're using.

Experiment—click a setting, and then click Apply to see if you like the setting. If you don't like a choice, try another one or press CTRL+Z to undo it.

### Schemes dialog box (Level tab)—Graphic Effects Used

Sets the thickness of lines, the amount of shading, and the number of items that receive a graphic effects treatment:

- The farther to the right you set the slider, the more complex the scheme (for example, lines may get thicker).
- The "Off" setting removes the graphic effects scheme altogether.

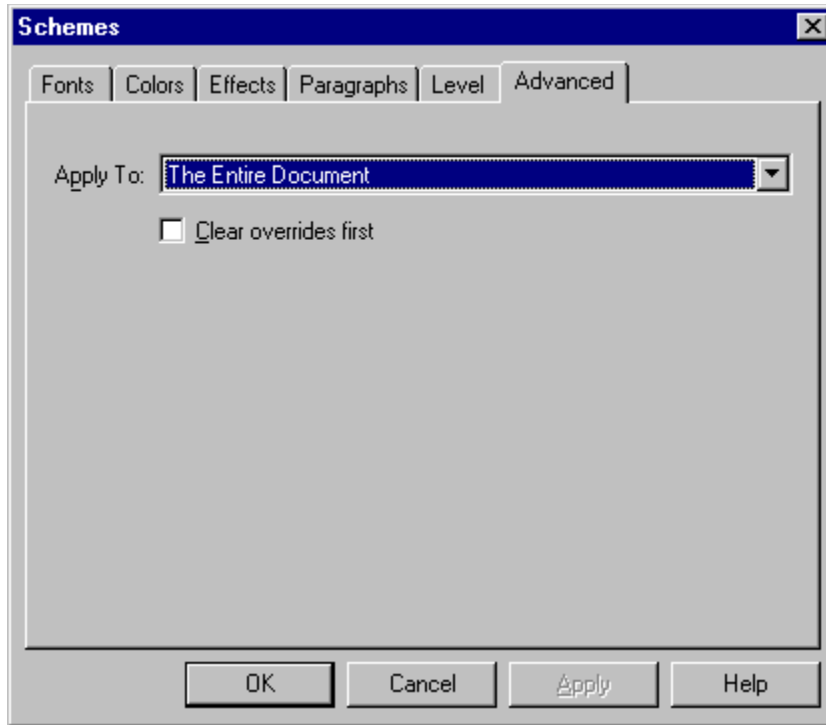

Experiment—click a setting, and then click Apply to see if you like the setting. If you don't like a choice, try another one or press CTRL+Z to undo it.

## Schemes (Advanced tab)

Design menu

Using the schemes menu option, you can change the font, color, graphic effects, and paragraph schemes for your document. You can also set whether a scheme change affects the entire document, a single component, or multiple components.

Click the picture below for details about each option.  
To display options on a different tab, click that tab in the picture.

### Level tab

- [Intensify the graphic effects scheme in your document](#)
- [Increase the amount of color in your document](#)

### Schemes dialog box (Advanced tab)—Apply To

Specifies whether the selected schemes should be applied to the entire document or to specific components.

**Schemes dialog box (Advanced tab)—Clear Overrides First**

Clears any formatting or schemes you've applied to individual components, so that your new formatting can be applied. (This is only relevant to what you select in the Apply To box.)

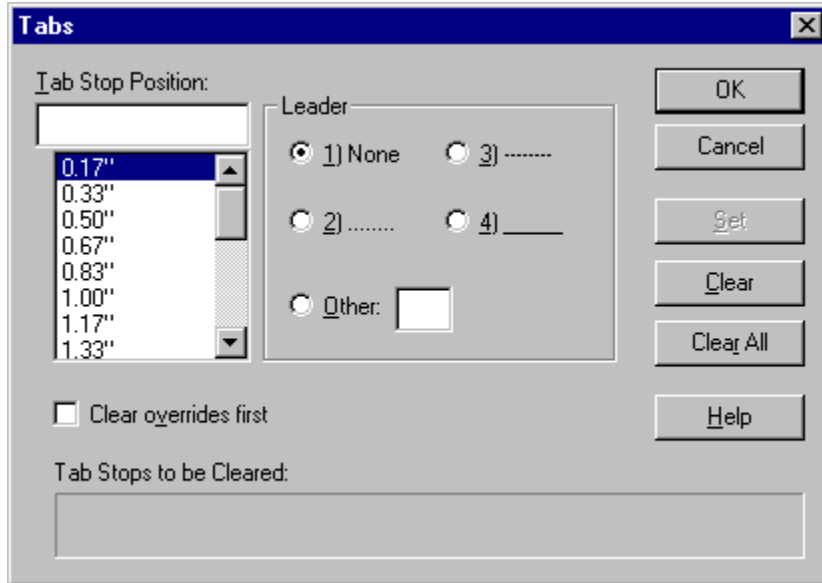

## Tabs

Design menu

Adds, deletes, and adjusts tab stops for the text in your document that is currently highlighted.

**Note:** You need to have a text component selected before you can set tabs.

[Click the picture below for details about each option.](#)

### More Information

#### How do you...

- [Set tab stops](#)
- [Remove one or all tab stops](#)
- [Move a tab stop](#)
- [Add dashes, dots, or lines to tab stops](#)
- [Remove dashes, dots, or lines from tab stops](#)
- [Change the unit of measurement to inches or centimeters](#)

Tabs dialog box—Tab Stop edit box

To create a new tab stop, type the measurement here.

To change a tab stop in the list, click the incorrect tab stop, click Clear, and then type the correct tab measurement.

**Tabs dialog box—Tab Stop list box**

Lists all the tabs that are currently set for the selected paragraphs.

To clear a tab stop in the list, click the incorrect tab stop, and then click Clear.

## Tabs dialog box—Leaders

1. Click the **Leaders** tab.

2. Click **Tab**.

3. Click **Tab**.

4. Click **Tab**.

5. Click **Tab**.

6. Click **Tab**.

7. Click **Tab**.

8. Click **Tab**.

9. Click **Tab**.

10. Click **Tab**.

11. Click **Tab**.

38. Click **Tab**.

39. Click **Tab**.

40. Click **Tab**.

41. Click **Tab**.

42. Click **Tab**.

43. Click **Tab**.

44. Click **Tab**.

45. Click **Tab**.

46. Click **Tab**.

47. Click **Tab**.

48. Click **Tab**.

49. Click **Tab**.

50. Click **Tab**.

To fill the empty space to the left of a tab stop with a leader line (dots, dashes, or a solid line), click option 2, 3, or 4. The default setting is "None."

Tabs dialog box—Other Leader

To fill the empty space to the left of a tab stop with a repeating character of your choice, such as \*, click Other and then type the character.

**Tabs dialog box—Clear Overrides First**

If the selected paragraphs have differing tab stops, click this option so that *i publish* clears all existing tab stops first, and then applies the new ones to the selected paragraphs.

**Tabs dialog box—Tab Stops To Be Cleared**

Lists the tab stop you just cleared, or lists "All" if you clicked Clear All.

**Tabs dialog box—Set**

Sets a tab stop for the selected paragraphs at the position you type in the Tab Stop Position box.

Tabs dialog box—Clear

Clears the selected tab stop position from the selected paragraphs.

**Tabs dialog box—Clear All**

Clears all tabs for the selected paragraphs.

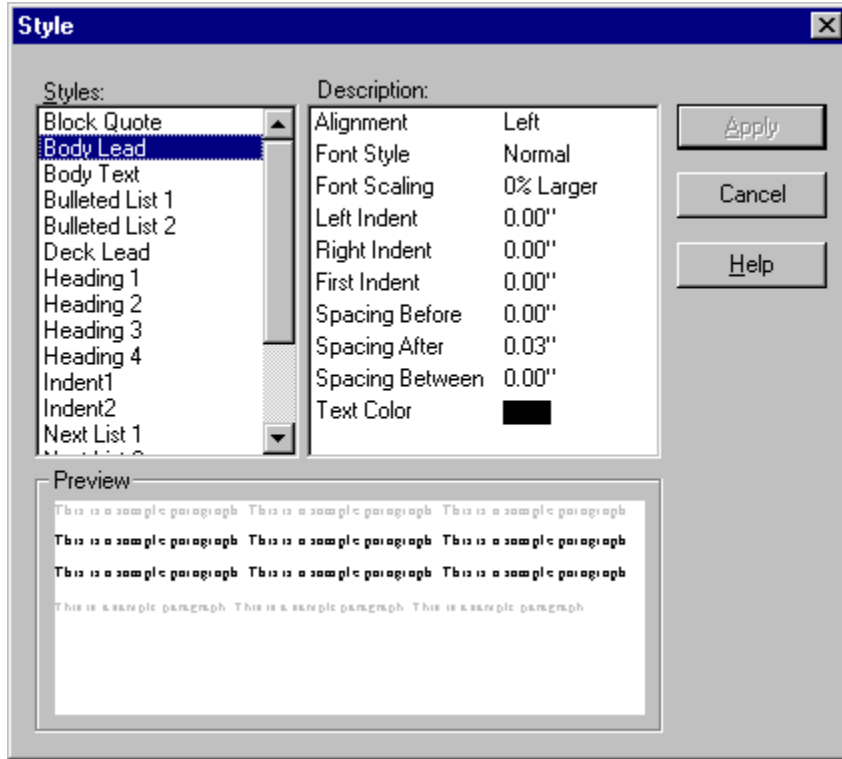

## Styles

Design menu

Displays all styles that you can apply to the currently highlighted text in your document.

**Note:** You need to have a text component selected before you can apply a style to text.

[Click the picture below for details about each option.](#)

## More Information

### How do you...

- [Change the style of text in a component](#)

## Styles dialog box—Styles box

Lists all the styles that you can apply to text.

Styles dialog box—Description

Describes the currently selected style, including paragraph alignment, font style, and so on.

Styles dialog box—Preview

Shows a sample of the effect that the selected style will have on your text.

Styles dialog box—Apply button

Applies the selected style to the highlighted text.

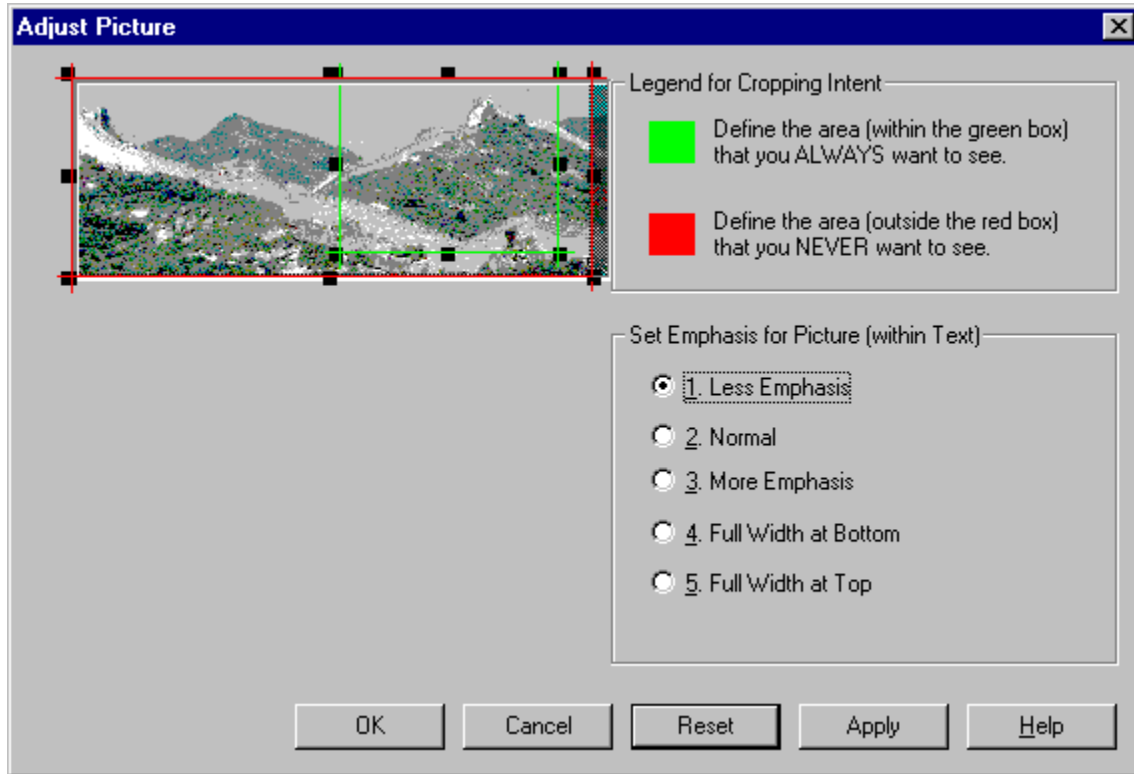

## Adjust Picture

Design menu

Lets you define the part of a picture you never want to see, and the portion that you always want to see. If a picture is within wrapping text, you can also set that picture's emphasis.

**Note:** You need to have a picture selected before you can adjust it.

[Click the picture below for details about each option.](#)

### More Information

#### How do you...

- [Trim \(crop\) the picture](#)
- [Change the emphasis of a picture](#)

#### Concepts

- [How to get the most out of your pictures](#)

### Adjust Picture dialog box—Image area

- The red rectangle trims off the area that you never want to see.
- The green rectangle defines the portion of the picture that you always want to see. If the green rectangle is not the same shape as the space available for it in the current layout, *i publish* uses the portion inside the green rectangle plus some of the surrounding picture to fill the available space.

## Adjust Picture dialog box—Emphasis

If a picture is within wrapping text, you can change its visual importance on the page. This may change its size and its position in the document.

- **Less Emphasis** makes the picture smaller.
- **Normal** makes the picture normal size. (This is what most pictures are by default.)
- **More Emphasis** makes the picture larger.
- **Full Width At Bottom** places the picture at the bottom of the page and makes it take up the entire width of the text.
- **Full Width At Top** places the picture at the top of the page and makes it take up the entire width of the text.

Adjust Picture dialog box—Reset

Resets the two rectangles to the outside area of the picture. Then you can drag them again.

Right-click only

## Edit Text

Right-click menu for text components

Provides a quick way to edit text in Outline view. This feature is also useful when you're in document view, for example, when you're zoomed out to look at the whole page.

[Click the picture below for details about each option.](#)

## More Information

How do you...

- [Edit text in outline view](#)

Edit text dialog box—Edit box

Type the text that you want to appear in the selected text component. When you're finished, click OK.

Edit text dialog box—OK

Inserts into the selected text component the text you just typed or edited.

Edit text dialog box—Cancel

Discards any new text you typed or changes you made and closes the Edit Text dialog box.

■

### **What kind of document do you want to create?**

Whether you're creating a document to be printed, as an onscreen presentation, or as a Web page, you start from the same point, but a few of the steps along the way differ slightly.

- Print document
- Web page
- Onscreen presentation
- Document based on an existing document or template of your own

Note: the next 2 procedures are almost identical

■

## Create a new document

1. On the Start tab at screen left, click **Create New**.

2. Click a document group.

**Note:** If you want to create a print document, and then convert it to a Web page or an onscreen presentation, pick the type of print document you want, and *i publish* will take care of the rest.

3. Click a template and scheme set.

■ [What's a template?](#)

■ [What's a scheme set?](#)

As you click different templates and scheme sets, notice that the pages on the far right change.

4. Click **Finish**.

5. Add your information.

■ **Text**—Type text, add an entire text file, or drag pieces of text from your word processor, or the Web.

■ [How?](#)

■ **Pictures**—Add a picture from your computer, a floppy disk, a CD-ROM, a server, or the Web.

■ [How?](#)

■ **Web elements**—Add a Web address (URL) or a way for people to send you email.

■ [How?](#)

6. Save and publish your document.

You can print your document, publish it as an onscreen presentation, or publish it as a Web page.

■ [How?](#)

## More Information

### You can also...

■ [Change the look of your document](#)

Leave this paragraph here...for some (unknown) reason, it makes the next topic appear properly.

■

## Create a Web page

1. On the Start tab at screen left, click **Create New**.

2. Click **Web Page**.

3. Click a **template**.

4. Add your information.

■ **Text**—Type text, add an entire text file, or drag pieces of text from your word processor, or the Web.

■ How?

■ **Pictures**—Add a picture from your computer, a floppy disk, a CD-ROM, a server, or the Web.

■ How?

■ **Web elements**—Add a Web address (URL) or a way for people to send you email.

■ How?

5. Publish your document as a Web page.

■ How?

6. Get ready to post your pages to the Web. (You only have to do this once.)

■ How?

7. Post your Web page to the World Wide Web.

■ How?

■ What happens when you Publish for Web?

■

### Create an onscreen presentation

1. On the Start tab at screen left, click **Create New**.

2. Click **Presentation**.

3. Click a **template**.

4. Add your information.

**Text**—Type text, add an entire text file, or drag pieces of text from your word processor, or the Web.

How?

**Pictures**—Add a picture from your computer, a floppy disk, a CD-ROM, a server, or the Web.

How?

5. View your onscreen presentation.

How?

■

**What document are you creating?**

- A printed document
- An onscreen presentation
- A Web document

Note: the next 2 procedures are almost identical

■

### Create a new document based on an existing one or a template

**1. Open the file or template you want to use.**

■ How?

**2. Save the document to a different name.**

■ How?

**3. Clear any text or pictures you don't want in the new document.**

■ How do you clear text?

■ How do you clear pictures?

**4. Add your information.**

■ **Text**—Type text, add an entire text file, or drag pieces of text from your word processor, or the Web.

■ How?

■ **Pictures**—Add a picture from your computer, a floppy disk, a CD-ROM, a server, or the Web.

■ How?

■ **Web elements**—Add a Web address (URL) or a way for people to send you email.

■ How?

**5. Save and publish your document.**

You can print your document, publish it as an onscreen presentation, or publish it as a Web page.

■ How?

■

### More Information

#### You can also...

■ Change the look of your document

Leave this paragraph here...for some (unknown) reason, it makes the next topic appear properly.

### **Open an existing document**

1. On the File menu, click Open Existing Document.
2. Find the file you want, and then click Open.

**Tip:** If you worked on this document recently, it may be listed at the bottom of the File menu. If it is, you can open the document by simply clicking its name.

### Create your own template

If you find yourself using the same layout and scheme settings in many documents, you can save a document to use as a template.

1. On the Start tab at screen left, click Create New.
2. Click a document.
3. Click a template and a scheme set.
4. Click Finish.
5. Save your document.

### More Information

#### What's next?

- Create a document based on your template

#### You can also...

- Change the layout of the entire document
- Change the schemes of the entire document

■

### Create a document using an existing document as a template

1. If you haven't already done so, create your own template.

■ How?

2. On the File menu, click Open Existing Document.

3. Find the file you want to use as a template.

■ How?

4. On the File menu, click Save As and save the document to a new name.

5. Clear any text or pictures you don't want in the new document.

■ How do you clear text?

■ How do you clear pictures?

6. Add your information.

■ **Text**—Type text, add an entire text file, or drag pieces of text from your word processor, or the Web.

■ How?

■ **Pictures**—Add a picture from your computer, a floppy disk, a CD-ROM, a server, or the Web.

■ How?

■ **Web elements**—Add a Web address (URL) or a way for people to send you email.

■ How?

### More Information

Leave this paragraph here...for some (unknown) reason, it makes the next topic appear properly.

**What's an intelligent component?**

Intelligent components are the building blocks of an *i publish* document. In fact, they're what make *i publish* smart. Each picture and piece of text in every *i publish* document is contained in a component. You'll find components when you click around in a document. The borders around text and pictures outline components.

Each intelligent component knows its role—Picture, Item Heading, Item Text, and so on. A component knows whether it can contain words or images (or both) and what to do with them. For example, a sentence contained in an Item Heading component will look like a headline; that same text in an Item Text component will look very different.

Because all the text and pictures in a document are contained in intelligent components, *i publish* knows where to position text and pictures and how to format them depending on their function. For example, in a letter, *i publish* puts the Writer's Name and Writer's Title components at the bottom; in a memo, those same components pop to the top. Or, in a printed document, an email address is just another piece of text; but in a Web document, it's a link the user can click to send email.

### **What's a layout?**

A layout provides a basic structure for your document, giving it an ordered look. *i publish* layouts, on the other hand, are interchangeable. Just make your best guess at picking a layout you like for the document you have in mind. It's easy to switch down the road.

Because the layout is truly automatic, you won't need to play with the size of pictures, the length of lines, or the position of text and pictures on the page. *i publish* layouts are smart enough to accommodate that extra picture or a lot of text, even adding pages if they're needed. And if you decide to cut things, the layouts know to shrink the components and construct the page so everything still fits nicely.

### **What's a pull quote?**

A pull quote is an excerpt from the main text set off in a larger font size, with a border, shading or some other decorative effect. It's used to add visual interest to the page and attract the reader's attention. In *i publish* a pull quote is an intelligent component.

Print

### What's a Profile component?

Use a Profile component in a flier, catalog, onscreen presentation, and some Web pages to feature a person in your company. You might include a descriptive sentence or two and a picture along with contact information. For example, in a real estate flier about a property, you could profile the listing agent. A Profile component appears at the bottom of a sheet layout, and on the last page of a booklet layout.

Print

**What's a sidebar?**

A sidebar presents non-essential information related to a main topic. Typically, sidebars are set off from the main body with a box or shading. For example, an article on nutrition might have a sidebar on how to tell when you need vitamins. In *i publish* a sidebar is an intelligent component.

Print

### What do curly quotes look like?

Use curly quotes rather than straight quotes to give a polish to your document.

"Abc..." Standard

“Abc...” Curly

Print

### **What's a nested list?**

A nested list is subordinate to the main list and is indented to show that relationship.

Here's an example:

- Oranges are a good source of nutrition, including:
- Vitamin C
- Folic Acid
- Bananas are also nutritious, but they're higher in calories than oranges.

Print

**What's a following paragraph?**

A following paragraph provides details about the bulleted item above it.

Here's an example:

- [Oranges](#)  
They're a great source of nutrition, including: Vitamin C and Folic Acid.
- [Bananas](#)  
They're nutritious, but they're higher in calories than oranges.

## How to get the most out of your pictures

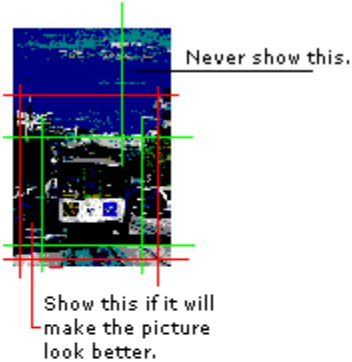

### Trimming a picture

When you trim a picture in *i publish*, you're telling the program what you want to happen with your picture so *i publish* can make it look good in the design you've chosen.

Trimming has two functions, both of which define what part of your picture the user sees:

- The red rectangle trims off the area that you never want to see.
- The green rectangle defines the portion of the picture that you always want to see. If the green rectangle is not the same shape as the space available for it in the current layout, *i publish* uses the portion inside the green rectangle plus some of the surrounding picture to fill the available space.

Always show this.

*i publish* will only show the portion of the picture inside the red border as scaling and sizing permits.

*i publish* will always show the part of the picture marked by the green border.

### Change the emphasis of a picture

If a picture is in the middle of a body of text, you can change its visual importance on the page—that is, make it bigger or smaller. This may also change its position in the document.

- How?

**What's the difference between delete and clear?**

- Deleting removes the text, picture, and the intelligent component itself from your document.  
Use Delete when you no longer want the component in your document—for example, you could delete a caption component if you decided the picture no longer needed it.
- Clearing removes the selected text or picture only, and leaves the empty component in your document.  
Use Clear when you want to replace a piece of text or a picture with other text or another picture.

Print

### **What's OLE?**

Using object linking and embedding (OLE), you can create an object in one program and add it to a document in another program such as *i publish*. For example, you can create a diagram in Visio or a spreadsheet in Excel, and then embed it in your *i publish* file.

Then, if you want to update the object, you just double-click it in your *i publish* document.

Print

### **What programs support OLE?**

To see a list, click Object on the Insert menu.

Some OLE programs support linking and embedding for all types of objects. Others support only embedding for certain types of objects and only linking for others. If a program doesn't support one or the other for a particular kind of object, the OLE program won't be listed when you click Paste on the Edit menu.

•

**What type of file are you trying to import?**

- Text file
- Picture file

### Picture formats *i publish* imports

For details about specific file compatibility issues, refer to the Release Notes on the *i publish* CD.

Format	File extension
Adobe PhotoDeluxe .psd files	.psd
Adobe PhotoShop 3.0 for 1-bit, 8-bit, and 24-bit files	.psd
<b>Note:</b> <i>i publish</i> does not support CMYK files.	
Animated GIF ( <i>i publish</i> imports the first frame only)	.gif
Encapsulated PostScript raster ( <i>i publish</i> imports the bitmap preview only.)	.eps .dcs
GIF	.gif
JPEG (Joint Photographic Experts Group)	.jpg .jpeg
Kodak FlashPix	.fpx
Kodak PhotoCD	.pcd
Microsoft FAX	.awd
PC Paintbrush	.pcx .dcx
Portable Network Graphics (PNG is a new image compression format specifically for the Web.)	.png
Seattle FilmWorks	.sfw
TIFF (Tagged Image File Format) without LZW compression	.tif
TIFF CCITT and other fax formats (one bit per pixel formats)	.tif
TWAIN images (typically created using a scanner)	—
Windows bitmaps	.bmp .dib .rle
Windows Metafiles and	.wmf

Enhanced Metafiles      .emf

**Tip:** You can also drag and drop Windows shortcut files into *i publish*, as long as the shortcut points to a file in one of the formats listed above.

### Text formats *i publish* imports

Format	File extension
ASCII	.txt
HTML files ( <i>i publish</i> will import the text without including referenced pictures or styles.)	.htm .html
 <a href="#">Want to know more?</a>	
Lotus AmiPro	.sam
Microsoft Word for Windows 6.0, 7.0/'95	.doc .dot
<b>Note:</b> <i>i publish</i> does not import Word 97 (8.0) files.	
Microsoft Works 3.0	.wps
Microsoft Write	.wri
Rich text format	.rtf
WordPerfect 5.x, 6.0, and 6.1	.doc .wpd

**Tip:** You can also drag and drop Windows shortcut files into *i publish*, as long as the shortcut points to a file in one of the formats listed above.

The next 2 topics are almost identical

### **What's a paragraph style?**

Just as intelligent components give structure to every *i publish* document, paragraph styles organize and format blocks of text that contain more than one paragraph. Use a style when you want to differentiate levels of headings, create bulleted lists, make quoted passages of text stand out, and so on.

Paragraph styles give *i publish* direction on how you want each block of text to look. When you apply a style (from the toolbar), *i publish* assigns characteristics to the text based on the current schemes and layout.

- Schemes specify the fonts and font sizes of the paragraph style, the color, and so on.
- Layouts govern the text's position on the page. (For example, a layout might direct a heading to span two columns.)

That way, when you change a scheme or layout, the paragraph styles respond accordingly.

### **How *i publish* imports text with styles**

When you bring in text from another program, such as a word processor, *i publish* honors the intent of the style. *i publish* does not, however, keep the fonts, font sizes, and so on, because it applies the formatting of the *i publish* schemes you chose. For example, *i publish* will apply its own Heading 1 style to all headings that you styled as first-level headings in your word processor.

### **How styles impact Web pages and onscreen presentations**

Paragraph styles also give *i publish* information about how to publish a Web page or onscreen presentation. For example, if you divide a long report into sections by applying the Section Head style to your main headings, *i publish* puts each section on its own Web page or screen.

Leave this paragraph here...for some (unknown) reason, it makes the next topic appear properly.

### What's a drop cap?

A drop cap (such as the one shown below) is a large, decorative letter used to introduce a block of text and create some visual interest on the page.

The next 2 topics are almost identical

## The big picture

The four tabs in the control window (at screen left) of *i publish* reflect the general order you'll work with documents in *i publish*:

1. **Start**—Start a new document and then choose a document group and layout, or open an existing document.
2. **Grab**—Drag and drop text and pictures from your computer, the World Wide Web, or the *i publish* Clip Gallery onto your document. You can also import text and pictures using the Text File and Picture File buttons.
3. **Design**—Experiment! Try different layouts. Apply different schemes (color, font, paragraph, and graphic effects) to change the entire look and feel of your document effortlessly.
4. **Publish**—From here you can publish your document—in print, as an onscreen presentation, or as Web pages for a company intranet or the World Wide Web.

You can try these concepts out using the *i publish* QuickStart. (On the Help menu, click Quick Start.)

Leave this paragraph here...for some (unknown) reason, it makes the next topic appear properly.

### **What happens when you Publish for Web?**

When you use the Publish For Web option, *i publish* converts your *i publish* file (.did) into multiple HTML files (.htm). When you publish your Web pages:

- To My Computer, *i publish* saves your files in the folder you set (using the Configure tab). You can view your pages using *i publish* or your Web browser.
- To the Internet, *i publish* takes your Web pages and the pictures they use and copies all of it to the Web server (such as AOL, CompuServe®, and so on) that you set using the Configure tab. Then, your Web pages will be available on the World Wide Web for people to visit.

- 

### **What's a scheme?**

You've heard the term "color scheme"—a set of colors, usually chosen by a professional designer, that are designed to work well together. *i publish* uses this familiar idea with four design schemes that together create the look and feel of every document:

- color
- fonts and font sizes
- graphic effects, such as borders and shading
- paragraph alignment and indents as well as spacing between paragraphs

## What's a color scheme?

A color scheme is a professionally-chosen set of coordinated colors that *i publish* applies to a document—to text, graphic elements (such as borders and lines), and backgrounds (such as in a sidebar). You choose the color scheme that works best for your document; *i publish* knows where and how to apply it.

You can change the colorfulness of your document using the Color Scheme Level. As you raise the level, you increase the document's colorfulness. If you set the level at zero, you'll get just black and white. You can also increase colorfulness by changing the Graphic Effects level, as it provides elements—such as borders and shading—that *i publish* applies color to.

### Color Scheme

← This is a color scheme.

### Color Scheme applied to your document

← The background is grey.

← The header is red.

← The body text is black.

### What's a graphic effects scheme?

A graphic effects scheme, which adds such elements as lines, shading, and borders, serves two main purposes in your document—to organize it and to decorate it. You choose the graphic effects scheme that works best for your document; *i publish* knows where and how to apply it.

You can accentuate the graphic effects in your document using the Graphic Effects Level. As you raise the level, you give the graphic effects more visual importance on the page; this has the added effect of increasing the colorfulness of your document because the graphic effects provide something for *i publish* to apply color to. (Note that if you set the level at zero, your document will get no graphic effects at all.)

#### Graphic Scheme

This is the  
Thick, Thin  
line graphic  
scheme.

#### Graphic Scheme applied to your document

This shows  
how the  
scheme  
affects your  
document.

## What's a paragraph scheme?

Paragraph schemes control paragraph alignment and indents, as well as the spacing between paragraphs. You choose the paragraph scheme that works best for your document; *i publish* knows where and how to apply it. Some paragraph schemes work in tandem with paragraph styles. For example, to see the large first letter (drop cap) in Formal paragraph schemes, you must apply a lead paragraph style (Section Lead, Body Lead, and Deck Lead) to see the drop cap in your document.

### Paragraph Scheme

### Paragraph Scheme applied to your document.

### What's a font scheme?

Font schemes control which fonts (and their relative sizes) are used in a document, including: all the headings, subheadings, body text, captions, and so on. It also controls which bullet graphics are used for your text. When you change a font scheme, *i publish* changes all the fonts in your document. You choose the font scheme that works best for your document; *i publish* knows where and how to apply it.

Some font schemes (such as "Times and Arial") use two fonts:

- The first font is used for headings and titles.
- The second font is used for body text.

Other schemes (such as "All Arial") apply the same font throughout your document.

#### Font Scheme

#### Font Scheme applied to your document

### **What's an onscreen presentation?**

In the past, presentations were developed on 35mm slides or printed on overhead transparencies and shown as a slide show. Now, presentations such as these can be created and delivered on your computer. Each screen makes one point and in *i publish* you move from screen to screen by clicking back and next arrows.

■

### **What's a scheme set?**

A scheme set is made up of settings from all four schemes that together contribute to the document's look:

- A color scheme, which applies one or more colors in appropriate places on a page.
- A font scheme, which sets both fonts and font sizes.
- A graphic effects scheme, which controls borders, shading, and lines.
- A paragraph scheme, which sets text alignment and spacing.

When you start a document, you choose a scheme set. However, you're not locked into your choice. You can still change each scheme individually to get just the right look for your document.

- 

### **What's a template?**

A template is made up of:

- A layout that controls the arrangements of text and pictures on the page.
- Components that contain each picture and piece of text you put in your document.

When you start a document, you choose a template as your starting point. However, you're not locked into your choice. You can still:

- Change the layout to rearrange the text and pictures on the page.
- Add components to or delete components from your document.

■

### **What are mirrored margins?**

Most books have different left and right pages. For example, the page numbers might be in the upper-left corner of left pages, and upper-right corner of right pages. In addition, there's usually extra space for the inside margins so that there's enough room for the binding. These are called mirrored margins.

You can have *i publish* mirror the margins of any newsletter.

■

**What is indicia?**

Newsletters can have mailing panels, so you can send them through the mail without an envelope. Indicia is the markings used for stamps or postal information.

■

## What are sample documents?

■ How do you view a sample document?

File	Description	Uses this template
Sample 1	Spectacular San Francisco travel flier	Flier
Sample 2	Spacious Home real estate flier	Catalog
Sample 3	Protect your home—insurance booklet	Catalog
Sample 4	Kauffman and Klause Staffing Solutions flier	Catalog

Sample 19	Angelino's Gourmet Fare "Savory Cheeses" flier	Flier
Sample 20	Angelino's Gourmet Fare brochure	Brochure

### **What's does Banner, Logo, and Logotype mean?**

- Banner—Your newsletter's title (text).
- Logo—An image of some kind that represents your newsletter or company.
- Logotype—Text converted to a graphic image, such as the IBM logotype.

In a newsletter, you can change whether *i publish* displays your banner, logo, or logotype. (On the Design menu, click Layouts, click Custom Layout, and then click the Component tab.)

■

### **Fitting your text and pictures on an *i publish* page**

*i publish* has its own methods for fitting things on the page as it lays out text and pictures for you. For documents with small components that hold short blocks of text, if the page gets a little tight, here are some of the techniques *i publish* uses to fit things on the page:

- Reduce font size and leading.
- Reduce picture size.
- Adjust how much of the picture is shown. *i publish* can only do this you've given *i publish* additional information about your picture by trimming it.
- How?

When things get really tight, *i publish* alerts you with a red border around the components that may be contributing to the problem.

- What else is there to know about your document when it's too full?
- How can you get text and pictures to fit better on the page?
- When is fitting an issue?

- 

### **How can you get text and pictures to fit better on the page?**

If your document is too full, you may solve the problem by making just one of the changes below.

- Edit your text.
- Reduce the height of your picture.
- How?
- Change the level of your graphic effects scheme.
- How do you change the level of a graphic effects scheme?
- Try a different graphic effects, paragraph, or font scheme altogether.
- How do you change a scheme?
- Try a different layout that gives more room to the component that is too full.
- How?
- Use a different picture.
- Delete components to give more vertical space to the component that is too full.
- How?
- How do you turn off the red rectangles?

- 

### **When is fitting an issue?**

When your page is very full, it usually means that one of the components is too tall to fit well on the page. You can tell your document is too full when:

- You see red borders around components that may be contributing to the fit problem.
- The black marker in the Status fit indicators at the bottom of your screen are in the red.
- Pictures or text are cut off and *i publish* draws a red border around those components.

Popup from Main Menu

*i publish* automates many of the tasks you typically do yourself in other programs, so you may not find things you want to do listed here. You can find out for sure using the Index in Help.

- Click the Index button above and type the term you're looking for.

Popup from Add, replace, or change Text

*i publish* automates many of the tasks you typically do yourself in other programs, so you may not be able to change things you usually can. For example, based on the layout you choose, *i publish* takes care of indenting text, formatting paragraphs, resizing text areas as you add or remove text, even adding and deleting pages as needed, and so on.

But check the Index to see if you can make the changes you want:

- Click the Index button above and type the term you're looking for.

Popup from Change the look of text

*i publish* automates many of the tasks you typically do yourself in other programs, so you may not be able to change things you usually can. For example, based on the layout and schemes you choose, *i publish* takes care of setting the font and size, the indents and alignment of text, and so on.

But check the Index to see if you can make the changes you want:

- Click the Index button above and type the term you're looking for.

Popup from Add or replace pictures

*i publish* automates many of the tasks you typically do yourself in other programs, so you may not be able to change things you usually can. Based on the layout and schemes you choose, *i publish* establishes the size and location of pictures, borders, the space around pictures, and so on.

But check the Index to see if you can make the changes you want:

- Click the Index button above and type the term you're looking for.

Popup from Trim (crop) or resize a picture

*i publish* automates many of the tasks you typically do yourself in other programs, so you may not be able to change things you usually can. Based on the layout and schemes you choose, *i publish* establishes the size and location of pictures, borders, the space around pictures, and so on.

But check the Index to see if you can make the changes you want:

- Click the Index button above and type the term you're looking for.

Popup for add, replace, or change a table, chart, or diagram

*i publish* automates many of the tasks you typically do yourself in other programs, so you may not be able to change things you usually can. Based on the layout and schemes you choose, *i publish* establishes the size and location of tables, charts, or diagrams, the borders that appear, and so on.

But check the Index to see if you can make the changes you want:

- Click the Index button above and type the term you're looking for.

Popup for Add, replace, or change a component

If you don't find what you're looking for on this list, try using the Index to find it:

- Click the Index button above and type the term you're looking for.

Path:  
[View menu](#)

If you don't find what you're looking for on this list, try using the Index to find it:

- Click the Index button above and type the term you're looking for.

Path:  
Doclook menu

*i publish* automates many of the tasks you typically do yourself in other programs, so you may not be able to change things you usually can. For example, based on the schemes you choose, *i publish* takes care of:

- The text indent, paragraphs format, size of text areas.
- The size and location of pictures, the borders, the space around pictures.
- The font and size, location of text on the page.

But check the Index to see if you can make the changes you want:

- Click the Index button above and type the term you're looking for.

Path:  
Add Web elements

If you don't find what you're looking for on this list, try using the Index to find it:

- Click the Index button above and type the term you're looking for.

**What do you want to do?**

- Use a pre-defined layout
- Choose individual layout options to create a custom layout
- Reorganize components on the page

■

**What do you want to do?**

- Choose another set of *i publish* colors
- Set up your own color scheme
- What's a color scheme?
- Apply your own color scheme

### Change the font scheme of the entire document

This changes the font and font sizes of all text components in your document.

1. Click the Design tab at screen left.
2. Click the Fonts tab.
3. Scroll through the list of schemes, and then experiment by clicking until you find the one you like.  
Every time you click a scheme, your document reflects the changes.

*If you don't like the new scheme,  
press CTRL+Z to undo it or click a  
different scheme.*

### Change the layout of the entire document

1. Click the Design tab at screen left.
2. Click the Layouts tab.
3. Scroll through the list of layouts, and then experiment by clicking until you find the one you like.  
Every time you click a layout, your document reflects the changes.

**Tip:** If you want more control over the individual layout settings, try creating a custom layout.

#### How?

- *If you don't like the layout, just click a different one.*

- *If you want to go back to the layout that was used when you last saved the document, on the Design menu, click Layouts, and then click Original Layout.*

### More Information

#### You can also...

- Find out what schemes and layout are applied to your document

### Choose individual layout options to create a custom layout

1. On the toolbar, click the Layout button, shown below.

2. At the bottom of the list, click Custom Layout.
3. Click the options you want, and then click OK.  
You can show or hide some components. To see if that's possible for your document, click the Components tab, and then click "Don't show" in the drop-down list.

**Tip:** If you want to know more about a particular option, click the Help button in the dialog box.

*If you want to go back to the layout that was used when you last saved the document, on the Design menu, click Layouts, and then click Original Layout.*

### More Information

#### You can also...

- Find out what schemes and layout are applied to your document

**Change the type of document (such as switch a letter to a fax)**

1. Click the Design tab at screen left.
2. Click the Layouts tab.
3. Scroll through the list of layouts, and then experiment by clicking until you find the one you like.  
Every time you click a layout, your document reflects the changes.

*If you don't like the layout, just  
click a different one.*

### **Change one or more schemes for the entire document**

1. Click the Design tab at screen left.
2. Click one of these tabs: Colors, Effects, Fonts, or Paragraphs.
3. Scroll through the list of schemes, and then experiment by clicking schemes until you find the one you like. Every time you click a scheme, your document reflects the changes.
4. Repeat steps 2 and 3 for any other schemes you want to change.

*If you don't like the new scheme,  
press CTRL+Z to undo it or click a  
different scheme.*

■

### **Intensify the graphic effects scheme in your document**

The graphic effects scheme level sets the thickness of lines, the amount of shading, and the number of items that receive a graphic effects treatment:

- The higher the number, the thicker the lines, and the more complex the scheme.
- "Off" removes the graphic effects scheme altogether.

1. Click the Design tab at screen left.
2. Click the Effects tab.
3. Watch your document as you drag the Scheme Level slider to get the effect you want.
  - If you drag the slider to the far left (Off), your document has no graphic effects in it.
  - If you don't see an effect in your document, drag the slider further to the right.
  - If the change is too subtle, drag the color slider further to the right as well.

■ How?

■

### **Increase the amount of color in your document**

The color scheme level sets what color and how much color each component gets:

- The higher the number, the more color applied.
- "Off" makes the document black and white, no matter what color scheme you're using.

1. Click the Design tab at screen left.
2. Click the Colors tab.
3. Watch your document as you drag the Scheme Level slider to get the effect you want.
  - If you drag the slider to the far left (Off), your document has no colors in it; it's just black and white.
  - If you don't see an effect in your document, drag the slider further to the right.
  - If the change is too subtle, drag the graphic effects slider further to the right as well.

■ How?

### **Set up your own font scheme**

You can create a font scheme using two fonts from your system.

1. On the Edit menu, click Custom Schemes.
2. Click the Fonts tab.
3. Under Title Font, under Size, click the size you want for the title, such as Large.
4. Under Title Font, under Font, click the font you want to use for all titles in your document.
5. Under Body Font, under Size, click the size you want for the body text, such as Medium.
6. Under Body Font, under Font, click the font you want to use for all body text in your document.
7. Click OK.

### **More Information**

#### **How do you...**

[Apply your own font scheme](#)

- 

### Apply your own font scheme to the entire document

You can create a font scheme using two fonts from your system.

**Note:** If you want to show your document on other computers, you may need to copy those font files to the other computers. (Make sure you check your font license agreement to ensure your license allows you to copy the fonts.)

If you don't copy the font files, and the new computer does not have the font you used for the scheme, Windows will substitute a font, such as Courier.

- 

Click the font scheme button (shown below) on the toolbar, and then click **Custom Font Scheme 1** or **2**.

,

### More Information

#### How do you...

- 

Set up your own font scheme

### **Set up your own color scheme**

You can create a color scheme using a color you choose.

1. On the Edit menu, click Custom Schemes.
2. Click the Colors tab.
3. Next to the color tile, click Edit.
4. Click the color you want in the Basic Colors, or click Define Custom Colors to define a custom color.
5. Click OK.

• How do you create a custom color?

### **More Information**

#### **How do you...**

• Apply your own color scheme

### Apply your own color scheme to the entire document

You can create a color scheme using a color you choose.

Click the color scheme button (shown below) on the toolbar, and then click **Custom Color Scheme 1** or **2**.

### More Information

How do you...

[Set up your own color scheme](#)

**Change your document's page orientation (portrait or landscape)**

1. On the File menu, click Print Setup.
2. Under Orientation, click Portrait or Landscape.
3. Click OK.

■

### **Change the document margins**

1. On the File menu, click Page Setup.
2. If you are creating a newsletter, and it will be bound into a book (copied on both sides of the paper), click Mirrored Margins to add a check.

*i publish* will then automatically add a bit more to the inside margins to accommodate the binding.

■

#### What are mirrored margins?

3. Under Margins, enter how much space you want for each margin.
4. Click OK.

■

*To return to the default page margins, click Reset Defaults.*

■

### Printing on letterhead

1. By default, many *i publish* documents contain components for your company logo and company name. Since you don't want to duplicate your letterhead, delete those components.

■ How?

2. On the File menu, click Page Setup.
3. If your letterhead area is at the top of the page, under Margins, increase the top margin. If your letterhead is along the left side of the page, increase the left margin.
4. Print your document.

■ How?

**Tip:** Don't waste your expensive letterhead! If you're not positive that the margins you changed are the right amount, try the following:

1. Print your document on plain paper.

■ How?

2. Place your letterhead behind the plain paper copy and hold it up to the light. Are your margins the right size?

### **Change the starting page number for your document**

You can change the starting page number for your document. For example, if your report will be bound with a number of other reports, you can set what you want for the first page.

By default, *i publish* does not number the cover page or the title page of a report; it numbers the first page of your body text as page 1.

1. On the File menu, click Page Setup.
2. Under Page Numbering, enter what you want to add or subtract from the normal page numbering.
3. Click OK.

### **Change the font size for the entire document**

1. On the toolbar, click the button below.

2. Click the font size you want.

### **Add a corporate color or font scheme standard to all copies of *i publish***

**Note:** If you've used a font other than those provided with Windows, you may need to put those font files on other computers. (Make sure you check your font license agreement to ensure your license allows you to distribute the fonts.)

#### **Make the new color or font scheme standard available to your company:**

1. Create your corporate color or font scheme.

How?

2. Save the document that contains the new scheme.
3. Put the *i publish* file (.did) on a server or send it through email to everyone that needs the new color or font scheme standard.

#### **Apply the new color or font scheme standard to each copy of *i publish*:**

1. On the Edit menu, click Custom Schemes.
2. Click the Colors or the Fonts tab (depending on which scheme you're adding).
3. Click Use As Default Settings to add the corporate color or font scheme to that copy of *i publish*.
4. Click OK.

■

## Drag and drop text

When you drag and drop, *i publish* copies the text from the source and pastes it into *i publish*.

1. If you haven't already done so, click the highlighted text, and then hold the left mouse button. Move your pointer to the text component where you want the text.
2. Watch your pointer.

Can't drop it.

Can drop it.

If you change your mind during the drag, just drag it back where it came from.

■

*To undo the drop, press CTRL+Z. If you start to drag something, and then change your mind, with your finger still on the mouse button, press the ESC key.*

### Drag and drop between two programs

You can drag and drop text, pictures, or files between programs using the Windows taskbar. When you drag and drop, *i publish* copies the text or picture from the source and pastes it into *i publish*.

1. Open the word-processing program that contains the text.  
Or, if you want to use a text or picture file, open the Windows Explorer.
2. Highlight the text you want, and then click the text and hold the left mouse button.  
Or, if you want to use a file, click the file and hold the left mouse button.
3. Drag the text, pictures, or files from a separate program down to the taskbar.

Pause for a moment, until *i publish* appears, and then drop it.

4. Move your pointer to the component in your document where you want the text, picture, or file, and then drop it.

*To undo the drop, press CTRL+Z. If you start to drag something, and then change your mind, with your finger still on the mouse button, press the ESC key.*

The next 2 topics are almost identical

## Drag and drop rules

In general, when you drop text or pictures onto a page without selecting where it goes first, *i publish* tries to put it where it looks best. Pay attention to your mouse pointer for a clue about where you can drop your content.

Can't drop it.

Can drop it.

## Dropping text

In most cases, dropping text within existing text works as you would expect from a word processor. In certain cases, however, *i publish* makes intelligent guesses:

- If you drop an Internet address onto existing text, *i publish* creates a Web address (URL) component which, when you convert your document to a Web page, will automatically create a link to that URL.
- If you drop a large amount of text onto a text component that can only hold a small amount of text, such as a title, *i publish* assumes you want the text to be descriptive text and drops it there instead.

## Dropping a picture onto text

- When you drop a picture onto long text, *i publish* creates a Picture component inside the text.

## Dropping text onto a picture

- When you drop text onto a picture, *i publish* creates a Caption component for that picture.

*To undo the drop, press CTRL+Z. If you start to drag something, and then change your mind, with your finger still on the mouse button, press the ESC key.*

Leave this paragraph here...for some (unknown) reason, it makes the next topic appear properly.

### Drag and drop a text or picture file

1. Move your pointer over the file you want, and then click and hold the left mouse button.
2. Move your pointer to a text or picture component.
3. Watch your pointer.

Can't drop it.

Can drop it.

*To undo the drop, press CTRL+Z. If you start to drag something, and then change your mind, with your finger still on the mouse button, press the ESC key.*

### Move intelligent components around on the page

1. Point to the component, and then click the right mouse button.
2. On the popup menu, point to Select, and then click the component you want to move.
3. Click the component and (holding the left mouse button) move your pointer to the spot where you want it. Release the mouse button. (Watch your pointer.)

Can't drop it.

Can drop it.

**Shortcut:** Press SHIFT+F10 to display the popup menu.

### Drag and drop a new component on the page

1. If you haven't already done so, click the Design tab, and then click the Components tab.
2. Click the component picture, and then hold the left mouse button.
3. Move your pointer to the exact spot in your document where you want the component.
4. Watch your pointer.

Can't drop it.

Can drop it.

*To undo the drop, press CTRL+Z. If you start to drag something, and then change your mind, with your finger still on the mouse button, press the ESC key.*

■

### Drag and drop pictures or text from the Internet or the Web

1. On the File menu, click Open Web Page.
2. Type the Web site you want to use.
3. Select the picture or text and drag it to the component in your document where you want it.
4. Watch your pointer.

■

Can't drop it.

Can drop it.

5. To return to the *i publish* tabs, click this button as many times as necessary. (It's at the top of the screen.)

■

*To undo the drop, press CTRL+Z. If you start to drag something, and then change your mind, with your finger still on the mouse button, press the ESC key.*

### **Zoom in to your document**

- To zoom in, press CTRL+SHIFT and the = (equals) key.
- To zoom out, press CTRL and the - (minus) key.
- To go back to the previous zoom setting, press F9.

**Start an additional copy of *i publish***

1. Click the Windows Start button at the bottom of your screen.
2. Point to Programs, point to *i publish*, and then click *i publish*.

### Scroll to another page

- Click the scroll bar to see additional pages.

- Or, to see more than one page at a time, click the zoom box at the top of the screen, and then click 25% or smaller.

### **Close a program that is open at screen left**

Click this button at the top of the screen until you see tabs again.

**Type a specific Web address**

1. On the File menu, click Open Web Page.
2. Type the Web site that you want, and then click OK.

**See a Web page or program full screen**

1. On the View menu, click Control Window Only.
2. When you want to see your document again, click Document and Control Windows on the View menu.

### Find a file

1. Click the Look In box, and then click where your file is located, either on the hard disk, a floppy disk, CD-ROM, or network drive.

2. Double-click folders to open them until you find the folder that contains your file.
3. Click your file, and then click Open.

■

### Find a file in Windows Explorer

1. Click this box, and then click a drive.

■ What if you don't see this box?

2. To open a file or folder, double-click it.

To move up one folder in  
the hierarchy, click this  
button.

■

### **Connect to the Web**

Some companies have a constant connection to the Web, while others (like home offices) may need to use a dialer to connect to the Web.

For specific details, see your Internet service provider's (ISP) documentation.

### **Install a newer version of Microsoft Internet Explorer**

1. Click here to go to a Web site to download the newest version of Internet Explorer.  
<http://www.design-intelligence.com/download/compsoft.html>
2. Depending on your Web browser settings, you may be asked whether you want to open it or save it to disk. If you want to save it, click Save It To Disk, and then click OK. In the Save As box, find the folder where you want the self-extracting file to go, and then click Save.  
The self-extracting file is different from the installed program—it's just a compressed version of all of the files. You can delete the self-extracting file after you install the program, so it's a good idea to put self-extracting files in a place you clean out often, such as in a C:\Temp folder.
3. When the self-extracting file is finished downloading, open Windows Explorer. (Click the Windows Start button, point to Programs, and then click Windows Explorer.)
4. Locate the file you just downloaded, and double-click it.  
The Internet Explorer installation starts.
5. After you've finished installing the Internet Explorer, you can either delete the self-extracting file or archive it in case you need to reinstall the program.

### **Install the Microsoft Web Publishing Wizard 1.1**

If you have the *i publish* CD (compact disc), you can install the Microsoft Web Publishing Wizard from the CD. If you don't have the CD, you can download the Microsoft Web Publishing Wizard from the Design Intelligence Web site.

1. Click here to go to a Web site to download it:

[http://www.design-intelligence.com/  
download/compsoft.html](http://www.design-intelligence.com/download/compsoft.html)

2. Depending on your Web browser settings, you may be asked whether you want to open it or save it to disk. If you want to save it, click Save It To Disk, and then click OK. In the Save As box, find the folder where you want the self-extracting file to go, and then click Save.

The self-extracting file is different from the installed program—it's just a compressed version of all of the files. You can delete the self-extracting file after you install the program, so it's a good idea to put self-extracting files in a place you clean out often, such as in a C:\Temp folder.

3. When the self-extracting file is finished downloading, in Windows Explorer, locate the file you just downloaded, and double-click it.

The Microsoft Web Publishing Wizard installation starts.

4. After you've finished installing the Microsoft Web Publishing Wizard, you can either delete the self-extracting file or archive it in case you need to reinstall the program.

### **Create a custom color**

1. In the color box, click the color you want to change.
2. Click Define Custom Colors, and then enter new values in either the RGB (red, green, blue) or HLS (hue, saturation, and luminescence) color models.
3. Click Add to Custom Colors.

■

### **Set up your Internet Service Provider (ISP)**

Before you can post your Web pages to the Web, you need to set up your Internet or Web Service Provider's (ISP) information.

1. Talk to your ISP and gather the following information:
  - What is your user name and password?  
In most cases, these should be the ones you use to connect to the Web.
  - Do you use "Dial-up Networking" (a modem) to access the Internet? Or do you use a "Local Area Network (Intranet)"?
  - What is the URL or Internet Address to which you will post your pages?  
Many ISPs use this format:  
`http://www.provider.com/~username`
  - What should your main HTML page be called? index.html? default.html? Should the page's name be all lower case?
2. On the File menu, click Publish For Web.
3. Click the Configure tab.
4. Under Internet, click New.
5. Follow the instructions onscreen to set up your ISP.

### Set where on the Internet you will post your Web pages

When you publish your HTML files to the Web, the Web address (URL) for your page is automatically generated by *i publish*, using the choices you make on the Configure tab, and also using your Internet service provider's (ISP) URL.

For example, a URL might be generated like this:

Http://Compu Serve.com/Seattle Travel/Specials/April.htm

The diagram shows the URL 'Http://Compu Serve.com/Seattle Travel/Specials/April.htm' with three brackets underneath it. The first bracket is under 'Compu Serve.com' and is labeled 'From your Internet Service Provider'. The second bracket is under 'Seattle Travel' and is labeled 'Folder name'. The third bracket is under 'Specials/April.htm' and is labeled 'Main HTML file name'.

1. If you haven't already done so, on the File menu, click Publish For Web.
2. Click the Configure tab.
3. Under Internet, click your Web site or click New to set up a new Web site.

If you're setting up a new Web site, the Microsoft Web Publishing Wizard 1.1 opens. Follow the instructions onscreen. (You may need to get this information from your Internet service provider (ISP).)

### **Set where on your computer your Web pages or onscreen presentation are stored**

1. If you haven't already done so, on the File menu, click Publish For Web or Publish For Screen.
2. Click the Configure tab.
3. Under My Computer, click Browse and then locate the folder you want to use.
4. Check "Remove These Files Before Publishing" if you want *i publish* to remove any files with the listed extensions before publishing your Web pages.  
If you're going to copy your Web pages to a server or other location, this ensures that the only files in the folder are the latest ones.

## **Use Internet Explorer or Netscape Navigator to view your Web pages**

### **To set up a browser to use with *i publish***

You only need to set up your browser once.

1. If you haven't already done so, on the File menu, click Publish For Web.
2. Click the Browsers tab.
3. Click Add.
4. Do one of the following:
  - If you want to use your default browser, click Registered Browser, and then click OK.
  - If you want to use a different browser, click Browse. Locate the browser you want, and then click OK.  
Typically, Internet Explorer is installed in: C:\Program Files\Plus!\Microsoft Internet\Iexplore.exe  
Typically, Netscape Navigator is installed in: C:\Program Files\Netscape\Navigator\Program\Netscape.exe  
*i publish* adds your browser to the list.

### **To use a browser to view your Web pages**

1. Click the Publish tab.
2. Click the My Computer box, and then click your browser.

•

**What type of document are you working on?**

- Agenda
- Announcement
- Correspondence (letter, memo, fax, or press release)
- Newsletter
- Report
- Resume

### Set where pictures, sidebars, and pull quotes appear

1. On the toolbar, click the Layout button, shown below.

2. At the bottom of the list, click Custom Layout.

3. Click how you want *i publish* to place the pictures, sidebars, and pull quotes:

- **Balanced on Page**—Specifies to balance the pictures, sidebars, and pull quotes on the page to create an attractive layout.

When you drop a picture, sidebar, or pull quote on a paragraph, in most cases it will appear on the same page as the paragraph, however the picture, sidebar, or pull quote may not be right next to the text.

- **Anchored to Text**—Specifies that when you drop a picture, sidebar, or pull quote onto a paragraph, the text will appear next to it. No matter where the text moves in the document, the picture, sidebar, or pull quote will move with it.

4. Click OK.

### **Set where pictures, sidebars, and pull quotes appear**

1. On the toolbar, click the Layout button, shown below.

2. At the bottom of the list, click Custom Layout.

3. Under Stories and Columns, click how you want *i publish* to place the pictures, sidebars, and pull quotes.

4. Click OK.

These procedures are only in the index—you can't get to them through the path (unless it's mentioned on a More Info screen)

## Tabs

■

**What do you want to do with tab stops?**

- Set tab stops
- Remove one or all tab stops
- Move a tab stop
- Add dashes, dots, or lines to tab stops
- Remove dashes, dots, or lines from tab stops
- Change the unit of measurement to inches or centimeters

### Set tab stops

1. Highlight the text that you want to add the tab stops to.
2. On the Design menu, click Tabs.
3. To remove any pre-existing tab stops before setting new ones, click Clear All.
4. Under Tab Stop Position, type a position for the tab stop.
5. Click Set.
6. Repeat steps 4 and 5 until you've set all of the tab stops you want, and then click OK.

### More Information

#### What if...

- You want to remove a tab stop?
- You want to move a tab stop?
- You want to change your unit of measurement to inches or centimeters?
- Your tabs were the way you wanted, but now they're not?

### Remove one or all tab stops

1. Highlight the text that contains the tab stop you want to remove.
2. On the Design menu, click Tabs.
3. Under Tab Stop Position, click the tab stop you want to remove, and then click Clear.  
Or, to remove all tab stops for the highlighted text, click Clear All.
4. Click OK.

*If you want the tab stops back,  
press CTRL+Z before you do  
anything else.*

### More Information

#### What if...

You want to move a tab stop?

### Move a tab stop

1. Highlight the text that contains the tab stop you want to move.
2. On the Design menu, click Tabs.
3. Under Tab Stop Position, click the tab stop you want to move, and then click Clear.
4. Under Tab Stop Position, type the new position for the tab stop.
5. Click Set.
6. Click OK.

*If you want to undo the move,  
press CTRL+Z before you do  
anything else.*

### More Information

#### What if...

- You want to remove a tab stop?
- You want to add dashes, dots, or lines (leaders) to a tab stop?
- You want to remove dashes, dots, or lines (leaders) from tab stops?
- You want to change your unit of measurement to inches or centimeters?
- Your tabs were the way you wanted, but now they're not?

### **Add dashes, dots, or lines (leaders) to tab stops**

1. Highlight the text that you want to add leaders to.
2. On the Design menu, click Tabs.
3. Under Tab Stop Position, type the position for the tab stop.
4. Under Leader, click the style you want for the tab stop.  
To set your own leader style, click Other, and then type the character you want to use, such as \*.
5. Click Set.  
*i publish* automatically adds leaders to all of the tab stops applied to the highlighted text.
6. Click OK.

### **More Information**

#### **What if...**

You want to remove dashes, dots, or lines (leaders) from tab stops?

### **Remove dashes, dots, or lines (leaders) from tab stops**

1. Highlight the text that has the leader tab stop you want to change.
2. On the Design menu, click Tabs.
3. Under Tab Stop Position, click the tab stop you want to change.
4. Under Leader, click None.
5. Click OK.

## OLE procedures

•

**What do you want to do?**

- Embed an existing document
- Embed and create a new object
- Edit an embedded object
- What is OLE (object linking and embedding)?

- 

**Is the object...**

- Part of another file?
- In its own file?

■

### **Embed a new, empty object in *i publish***

1. Click where you want to put the OLE object:
  - If you want it to appear next to a paragraph, click the paragraph.
  - If you want it to be in a picture component or to replace an existing picture, click the picture component.
2. On the *i publish* Insert menu, click OLE Object.
3. Click Create New, then under Object Type, click the object (such as Paintbrush Picture) that you want to embed.
4. Click OK.

The server application starts automatically.
5. When you're finished creating the object, on the server program's File menu, click Close or Exit & Return to display *i publish*.

### **More Information**

#### **You can also...**

- Embed an existing file in *i publish*
- Embed a portion of a file in *i publish*

■

### **Embed an existing file in *i publish***

1. Click where you want to put the OLE object:
  - If you want it to appear next to a paragraph, click the paragraph.
  - If you want it to be in a picture component or to replace an existing picture, click the picture component.
2. On the *i publish* Insert menu, click OLE Object.
3. Click Create From File.
4. Click Browse, and then find the file that contains the object you want to use.
5. Click OK.

|

### **More Information**

#### **You can also...**

- Embed a portion of a file in *i publish*

■

### **Embed a portion of a file in *i publish***

1. Click where you want to put the OLE object:
  - If you want it to appear next to a paragraph, click the paragraph.
  - If you want it to be in a picture component or to replace an existing picture, click the picture component.
2. In the server program, highlight the portion of the file you want to embed.
3. On the server program's Edit menu, click Copy.
4. On the *i publish* Edit menu, click Paste Special.
5. Click OK.

|

### **More Information**

#### **You can also...**

- Embed and create a new object
- Embed an existing file in *i publish*

**Edit an embedded object in *i publish***

- Double-click the object
- When you're finished making changes, on the server program's File menu, click Close or Exit & Return.

### **Uninstall *i publish***

1. Click the Windows Start button, point to Settings, and then click Control Panel.
2. Double-click Add/Remove Programs.
3. In the list, click *i publish*, and then click Add/Remove.
4. Open Windows Explorer. If you see this folder, delete it: C:\Program Files\Design Intelligence\ipublish.

### Add a Profile component

1. Point to a blank part of the document, and then click the right mouse button.
2. On the popup menu, point to Insert Component, and then click Profile.

If the Profile component is not on the list, it means the Profile component is not available for the layout or type of document you're creating.

**Shortcut:** Press SHIFT+F10 to display the popup menu.

|

### More Information

#### Concepts

What's a profile?

**Add a price, Web address, or flash line**

1. Point to the text portion of an Item component, and then click the right mouse button.
2. On the popup menu, point to Insert Component, and then click Item Flash Line, Item Price, or Item Web Address.

If the component you want is not on the list, it means that component is not available for the layout or type of document you're creating.

**Shortcut:** Press SHIFT+F10 to display the popup menu.

### **Add a sidebar**

1. Point to the text where you want the sidebar, and then click the right mouse button.
2. On the popup menu, point to Insert Component, and then click Sidebar.  
If the Sidebar component is not on the list, it means sidebars are not available for the layout or type of document you're creating.

**Shortcut:** Press SHIFT+F10 to display the popup menu.

### **Search specific text only**

1. Highlight the text you want to search.
2. On the Edit menu, click Find or Replace.

|

### **More Information**

#### **You can also...**

- Find text in your document
- Find and replace text in your document

### **Change the language dictionary *i publish* uses to check spelling**

1. On the Edit menu, click Options.
2. Click the Spelling tab.
3. Click the Language box, and then click the language you want to use.
4. Click OK.

### **More Information**

#### **You can also...**

[Check the document for misspellings](#)

### Search for straight quotes and replace them with curly quotes

When you type text, *i publish* automatically converts straight quotes to curly (or smart) quotes. When you insert a document from another program, *i publish* does not change straight quotes to curly quotes. To fix this:

1. On the Edit menu, click Replace.
2. In the Find What box, type a " straight quote mark.
3. In the Replace With box, " type a straight quote mark.

It seems strange, but having *i publish* to replace straight quotes with straight quotes tells *i publish* that it's OK to modify the imported text, so *i publish* will convert the straight quotes to curly ones.

4. Click Replace All.
5. Click Cancel to close the dialog box.

## Options dialog box procedures

### **Automatically open the last document you worked on**

You can set *i publish* to open the last document you worked on whenever you restart the program.

1. On the Edit menu, click Options.
2. Under General Options, check Reload Last Document At Startup.
3. Click OK.

■

### See if you have too much text or too many pictures

You can tell your document is too full when:

- You see red borders around components that may be contributing to the fit problem.
- The black marker in the Status fit indicators at the bottom of your screen are in the red.
- Pictures or text are cut off and *i publish* draws a red border around those components.
- What does *i publish* do to fit your text and pictures?

### See how full a page is getting

- Look at the bottom of the screen:

Text Fit      Graphics Fit  
Status        Status

As the black line moves closer to the red area, your page is getting more dense.

- What can you do if the black line is in the red area?
- When is fitting an issue?

### Outline in red all components contributing to the fit problem

When your page is very full, and one of the Fit Status meters (at the bottom of the screen) is in the red, *i publish* draws a thin red line around all components that may be contributing to the fit problem.

- What can you do if components are outlined in red?

To turn this option off:

1. On the Edit menu, click Options.
2. Under General, click When Document Is Overfit, Highlight Contributing Components.
3. Click OK.

### **Edit user or company information**

*i publish* uses this information to automatically fill in some components in your document.

1. On the Edit menu, click Options.
2. Click the User Info tab.
3. Change the information that's incorrect, and then click OK.

### **Set the default file locations**

You can set where *i publish* looks for clip art, text files, and *i publish* documents.

1. On the Edit menu, click Options.
2. Click the File Locations tab.
3. Under Type, click the type of file whose default location you want to change.
4. Click Modify.
5. Find the folder in which you typically keep that type of file.
6. Click OK.
7. When you're finished changing file locations, click OK.

### Change spelling options

1. On the Edit menu, click Options.
2. Click the Spelling tab.
3. Do any of the following:
  - To speed up spelling, turn off **Always Suggest Spelling Alternatives**. (Make sure there is no checkmark.)
  - To change the rules for the types of errors *i publish* looks for, click the options under **Rules** to add or remove checkmarks.
  - To change the language dictionary, click the **Language** box, and then click a different language.
  - To change the personal dictionary you're using, under **Personal Dictionary**, click Browse. Find the dictionary file (ending in .dic) you want, and then click OK.
4. Click OK.

### More Information

#### You can also...

- Check the document for misspellings

**Change your unit of measurement to inches or centimeters**

1. On the Edit menu, click Options.
2. On the General tab, click the Measurements box, and then click Inches or Centimeters.
3. Click OK.

### **Get going with QuickStart**

The *i publish* QuickStart is a short interactive tour designed to introduce you to the important concepts of this new approach to personal publishing.

*i publish* is different from other programs, so taking the time up front to understand the differences will boost your productivity.

On the Start tab of the control window (at screen left), click *i publish* QuickStart.

### Set page options

1. On the File menu, click Page Setup.
2. Under Paper, set the paper size.
3. Under Orientation, set whether you want the page to be landscape or portrait.
4. Under Margins, change the default values if you want your margins to be smaller or larger.
5. Under Page Numbering, enter what you want as the starting page number for the document.

**Note:** For reports, *i publish* does not number the cover page or the title page; it numbers the first page of your body text as page 1.

6. If you are creating a newsletter that will eventually be printed on both sides of the paper, click Mirrored Margins to add a checkmark.

What are mirrored margins?

7. Click OK.

### More Information

#### You can also...

Print your document

**Print more than one copy of a document**

1. On the File menu, click Publish To Printer.
2. In the Number Of Copies box, type the number of copies you want to print.
3. Click OK.

### **Print to a non-default printer**

1. Click the Windows Start button, point to Settings, and then click Printers.
2. Using the Windows Explorer, drag your *i publish* file (which ends in .did) onto the printer icon.  
*i publish* prints the entire file using your default printing settings.

### **Print using the Run dialog box**

1. Click the Windows Start button, and then click Run.
2. In the Open box, type the following, where *c:\personal\myfile.did* is the name and location of your *i publish* document.

```
ipublish.exe /p c:\personal\myfile.did
```

### Print your Web page the way it appears onscreen

When you use Publish To Printer, *i publish* prints documents as they appear in the document window only. To print your Web pages as they appear after you Publish For Web, you must first publish them, and **then** print them one at a time.

1. View your document as a Web page.

#### ● How?

2. Click a blank part of the page.

*i publish* uses HTML frames to keep your navigation (or table of contents) in a fixed position on your page. When you click the page, you're telling *i publish* which frame you want to print.

3. On the File menu, click Print.

*i publish* prints the currently displayed Web page.

4. Click a jump (link) to display one of your other Web pages. Repeat steps 2 and 3 until you've printed all of your Web pages.

### **Print your onscreen presentation the way it appears onscreen**

When you use Publish To Printer, *i publish* prints documents as they appear in the document window only. To print your onscreen presentation as it appears after you Publish For Screen, you must open the HTML files in your Web browser, and **then** print.

1. Publish your document as an onscreen presentation.

● How?

2. View your onscreen presentation in your default browser.

● How?

3. In your Web browser, on the File menu, click Print.
4. Click an arrow to view the next screen.
5. Repeat steps 3 and 4 for each page in your onscreen presentation.

- 

### **Hide or show parts of the screen (toolbar, status bar, ...)**

You can hide or show the main toolbar, format toolbar, navigation toolbar, and status bar.

- What options are on the toolbars?

#### **To hide part of the screen**

- On the View menu, click the name of the item you want to hide.  
(When hidden, there is no checkmark next to an item.)

#### **To show part of the screen**

- On the View menu, click the name of the item you want to show.  
(When showing, there is a checkmark next to an item.)

### **Delete a document**

1. Open Windows Explorer. (Click the Windows Start button, point to Programs, and then click Windows Explorer.)
2. Open the folder where you saved the document.
3. Click the document you want to delete, and then press the DELETE key.
4. In the confirmation box, click Yes.

### **If you didn't find it there...**

1. On the Windows Explorer Tools menu, point to Find, and then click Files or Folders.
2. In the Named box, type: **\*.did**  
This searches for all *i publish* document files (which end with .did).
3. Click the Look In box, and then click the drive letter associated with your computer (typically C:).
4. Click Find Now.
5. If necessary, scroll through the list that appears to locate the file you want to delete.
6. Click that file, and then press the DELETE key.

## RGB values of color schemes

If you embed an object in *i publish*, you may want to make the colors in the embedded object match the primary color in your color scheme. For example, if you have a pie chart from Excel embedded in *i publish*, you can make the primary color in your chart match your *i publish* color scheme.

### How can you tell which color scheme you're using

#### No color scheme

Color Scheme	Red	Green	Blue
Black and White	0	0	0

#### One accent color

Color Scheme	Red	Green	Blue
Gray	60	60	60
Olive Green	100	88	45
Brown	54	24	5
Dark Blue	7	21	71
Rust	141	38	1
Medium Blue	81	91	133
Burgundy	93	0	30

#### Two accent color

Color Scheme	Red	Green	Blue
Brown and Mint Green	77	31	26
Blue and Gold	3	26	50
Purple and Green	66	14	90
Turquoise and Purple	1	153	155
Salmon and Green	0	66	62

#### Colored Text

Color Scheme	Red	Green	Blue
All Sage Green	19	53	34
All Bright Blue	56	65	121
All Purple	66	14	90
Brown Text with Mint Green	77	31	26

**Note:** This list only applies to color schemes included with *i publish*; it does apply to color schemes that were purchased from the *i publish* Web site or from other sources.

■

***i publish* automates many tasks for you...**

*i publish* automates many of the tasks you typically do yourself in other programs, so you may not be able to change things you usually can. (This is because *i publish* controls the design.) For example, *i publish* takes care of:

- Font formatting, such as kerning, leading, and so on.
- Paragraph formatting, such as line spacing, indenting text, resizing text areas as you add or remove text, widow control, orphan control, and so on.
- Repeating text, by automatically making your title and footer text match.
- Document formatting, such as page breaks, and so on.

### Change how you view files in the Windows Explorer box

You can customize the Windows Explorer box to match your preferences.

1. On the Grab tab, click From Windows Explorer.
2. On the View menu of the Windows Explorer box, make sure that Toolbar is checked. (If it isn't, click Toolbar to check it.)
3. On the toolbar, click the icon that matches how you prefer to view your files.

Large  
icons

Small  
icons

List

File  
details

4. On the View menu, click Options.
5. On the Folder tab, choose the option that you want:
  - If you want to only see one window open, click "Browse folders by using a single window that changes as you open each folder."
  - If you like multiple windows open to show the hierarchy of folders and files, click "Browse folders using a separate window for each folder."
6. Click OK.

### **Undo a scheme applied to a particular component**

When you drag and drop a scheme onto a component, *i publish* formats that component with a scheme that may be different from the rest of the document. You can easily make all the formatting in your document the same.

1. On the Design menu, click Schemes.
2. Click the Advanced tab.
3. In the Apply To box, make sure it says The Entire Document.
4. Click Clear Overrides First to add a checkmark.
5. On the Colors, Effects, Fonts, or Paragraphs tab, click the scheme you want to apply to the entire document.
6. Click OK.

### **Send an *i publish* document through email**

You can send an *i publish* document through your electronic mail (email) program.

1. With your document open, on the File menu, click Send.

This displays your email program and a message containing the *i publish* file.

**Note:** If this feature is not available, then your email program does not support Messaging Application Program Interface (MAPI).

2. Send the email message the same way you would any other message.

### **View an *i publish* file sent through email**

Open the email message, and then double-click the *i publish* icon.

### **Add a page**

*i publish* automates many of the tasks you typically do yourself in other programs, and adding pages is one of them.

*i publish* adds a page when there's no more room for the text and pictures on the current page.

### **Delete a page**

*i publish* automates many of the tasks you typically do yourself in other programs, and deleting pages is one of them.

*i publish* deletes pages when you cut enough text (or pictures) that the additional page is no longer needed.

■

### View sample documents to decide on the layout you want

1. Make sure the *i publish* CD is in your CD-ROM drive.
  2. Click the Start tab, and then click Sample Documents.
  3. Find the sample document you want to use.
  4. Do one of the following:
    - To view or use a sample document, click Open.
    - To see what the sample document looks like as Web pages or as an onscreen presentation, click View Web Version or View Screen Version.
      - When you're finished, click this to return to the list of sample documents.
- If you like the way the Web page or the onscreen presentation looks, click Open so you can modify it to your own text and pictures. Then, when you're finished, publish it as Web pages or as an onscreen presentation.

5. Clear any text or pictures you don't want in the new document.

- How do you clear text?
- How do you clear pictures?

6. Add your information.

- **Text**—Type text, add an entire text file, or drag pieces of text from your word processor, or the Web.
- How?
- **Pictures**—Add a picture from your computer, a floppy disk, a CD-ROM, a server, or the Web.
- How?
- **Web elements**—Add a Web address (URL) or a way for people to send you email.
- How?

7. Save and publish your document.

- How?

### More Information

#### What's next?

- Change the look of your document

### **Viewing your onscreen presentation full screen in your Web browser**

1. Click the Windows Start button, and then click Run.
2. In the Open box, type the command that opens your Web browser in "kiosk" mode, followed by the folder where your presentation is stored.

For example, if the folder is C:\My Documents, and your presentation's first page is Present.htm, you'd type one of the following:

If you're using Internet Explorer, type:

```
iexplore -k C:\My Documents\Present.htm
```

If you're using Netscape, type:

```
netscape -k C:\My Documents\Present.htm
```

### How do you fold a brochure?

Brochure documents are designed to be printed sideways (in landscape orientation). Each side of three panels is printed and copied back to back. Then the document is folded into three panels.

These are the pages in *i publish*:

**Page 1**

**Page 2**

These are the printed and folded pages:

■

### **Tips for working on a brochure**

You can dramatically change the look of text and pictures in your document.

- To change the look and size of text, apply a paragraph style.
- How?
- To change the size of pictures, change the picture emphasis.
- How?

### **More Information**

#### **What if...**

- The brochure is very slow? You may need to adjust how things are fitting.
- How?

If/When we put a WinWord template out on the Web, add this text to the beginning of the procedure.

1. Use the Microsoft Word template we've provide from our Web site.

[http://www.design-intelligence.com/  
download/compsoft.html](http://www.design-intelligence.com/download/compsoft.html)

Where is this template available on our Web site?

■

### Tips for putting text from Microsoft Word into *i publish* documents

The most efficient way to use Microsoft Word and *i publish* together is to create styles in Microsoft Word that match the style names in *i publish*. Then, when you import your text into *i publish*, all of your styles automatically map to the correct *i publish* style.

1. In Microsoft Word, create styles using these names (make sure you use the same spelling and spaces):

Block Quote	Indent 1
	Indent 2
Body Lead	
	Next List 1
Body Text	Next List 2
Bulleted List 1	
Bulleted List 2	Notations
	Section Head
Deck Lead	Section Lead
Heading 1	Title Head
Heading 2	
Heading 3	
Heading 4	

**Note:** Use any formatting you like in Microsoft Word. *i publish* only looks at the style names, and then applies formatting based on the layout and schemes you chose.

- How do you create styles in Microsoft Word?

2. In Microsoft Word, apply styles to your Microsoft Word document.

- How do you apply a style in Microsoft Word?

3. In *i publish*, import your text file.

- How?

**To find out how to create a style**

1. If you are using Microsoft Word 7.0, on the Microsoft Word Help menu, click Microsoft Word Help Topics.
2. Click the Index tab, and then type: `styles, creating and editing`
3. Press Enter, click "Create a style," and then click Display.

**To find out how to apply a style**

1. If you are using Microsoft Word 7.0, on the Microsoft Word Help menu, click Microsoft Word Help Topics.
2. Click the Index tab, and then type: `styles, applying`
3. Press Enter, click "Apply a style," and then click Display.

### **Add *i publish* clip art (from the Web) so text wraps around it**

1. If you haven't already done so, connect to the Web.

• How?

2. In *i publish*, click the Grab tab at screen left, and then click From *i publish* Clip Gallery.

3. Find the clip art you want, click "Hi-Res" underneath it, and then wait for the clip art to download completely.

4. Drag the clip art onto a paragraph, and then drop it. (Watch your pointer.)

• How?

•  Can't drop it.

•  Can drop it.

The picture will appear below the paragraph you dropped it onto. Wherever you move the paragraph, the picture stays with it.

5. To return to the *i publish* tabs, click this button as many times as necessary. (It's at the top of the screen.)

**Note:** For many documents, you can change where pictures, pull quotes, or sidebars appear on the page.

• How?

• *If you don't like where the clip art landed, press CTRL+Z to undo the drop.*

### **More Information**

### Add a picture from another *i publish* document so text wraps around the picture

To move pictures or text between two *i publish* documents, you need to have two copies of *i publish* open at the same time.

1. With *i publish* already running on your screen, open *i publish* again.
  - How?
2. In the second copy of *i publish*, open the *i publish* document that contains the picture you want to copy.
3. Point to the picture, and then click the right mouse button. (Or, press SHIFT+F10.)
4. On the popup menu, point to Select, and then click what you want to copy.  
If you click Picture, the image and any caption or caption title will be copied. If you click Image, only the art will be copied.
5. On the Edit menu, click Copy.
6. In the first copy of *i publish*, click the paragraph that you want the picture to stay with. (The picture will always appear below this paragraph.)
7. On the Edit menu, click Paste.  
If you trimmed the picture, that information is pasted with the picture.

**Note:** For many documents, you can change where pictures, pull quotes, or sidebars appear on the page.

- Writing and presenting an onscreen presentation

### **View your onscreen presentation using your Web browser**

1. On the File menu, click Publish for Screen.
2. Click the Shortcuts tab.
3. Do one of the following:
  - Click "Place shortcut to presentation on desktop."
  - Click "Place shortcut to presentation in folder," and then click Browse to locate the folder you want.
4. Click the Publish tab, and then publish your document as an onscreen presentation.

#### **How?**

5. Do one of the following:
  - If you saved the shortcut on the desktop, go to the desktop.
  - If you saved the shortcut in a folder, use Windows Explorer to locate the shortcut.
6. Double-click the shortcut to start your presentation.

### **More Information**

#### **Tips**

- [Writing and presenting an onscreen presentation](#)

### **Close a document**

- On the File menu, click Close.  
If you've made changes to your document since you last saved it, *i publish* gives you the opportunity to save the changes.

■

### Print your document on an outside printer

If you don't have time to print your document, or if you are not always connected to a printer, you can create a file that contains the document you want to print, and you can then print the file at a later time.

If you plan to go to a business that has high-end printers available, you may want to call them in advance. These businesses typically have files available for you to install on your computer. You'll typically need these files:

- Printer driver file
- PPD file (PostScript Printer Description)

### Print your document to a file

1. Make sure you have installed the printer driver for the specific printer you'll be using. For details, see the Windows online Help.
2. On the File menu, click Print Setup.
3. In the Name box, click the printer that you'll print the file with.
4. If you need to change printer settings, click Properties.
5. On the File menu, click Publish To Printer.
6. Check the Print To File box, and then click OK.
7. In the File Name box, type a file name, and then click Save.

If you're printing to a PCL printer, *i publish* adds .prn to the end of the file name. (Such as myfile.prn.)

If you're printing to a PostScript printer, *i publish* adds .ps to the end of the file name. (Such as myfile.ps.)

Make sure you take the following files with you to the outside printer:

- The file you just created, ending in either .prn or .ps.  
The file that *i publish* creates may be too large to fit on a floppy disk. If you need to take this file to another business, you may need to use a Zip drive or use a program (such as Pkzip) to put the file on multiple floppy disks.
- How can you save a file across multiple floppy disks?
- The font files for the fonts you used in your document.  
You can find your fonts in your C:\Windows\Fonts folder. Fonts end in .ttf

### Print the file

1. Click the Windows Start menu, click Programs, and then click MS-DOS Prompt.
2. Type the following, where "PRINTER" is the name of your printer queue.  
`net use lpt1 \\PRINTER`
3. If you're printing to a PCL printer, type the following, where "yourfile.prn" is the name of your printer file.  
`copy yourfile.prn > lpt1`  
If you're printing to a Postscript printer, type the following, where "yourfile.ps" is the name of your printer file.  
`copy yourfile.ps > lpt1`

### **Change your document to European paper sizes**

1. On the File menu, click Print Setup.
2. Under Paper, set the paper size, and then click OK.

**Save a copy of your document to a different location or with a new name**

1. On the File menu, click Save As.
2. In the Save In section, find the folder where you want to save the file.
3. In the File Name box, type a new file name for the document.
4. Click Save.

## Update your Web page

*i publish* saves only one version of your document. To edit a Web page or an onscreen presentation, you edit the original document, not the output.

1. If necessary, open the document that you need to update.
2. Edit your document in *i publish*.  
You will be working with the version of your document that looks appropriate for print.
3. Publish your Web page again.

■ How?

4. If you've already posted your Web page to the World Wide Web, you'll need to post it again.

■ How?

## Advanced users

When you publish your document as a Web page, *i publish* generates HTML files. If you feel comfortable editing HTML code, you can use any text editor (such as Windows Notepad) to edit these HTML files directly.

**Important:** Any changes you make to these HTML files will **not** be reflected in your *i publish* document (.did) and will be lost if you publish your document as a Web page again.

For details about HTML codes, check the Web—there are lots of good, free HTML reference libraries available for download.

## More Information

#### What if...

■ *i publish* won't be installed on the computer you're using for your presentation?

#### You can also...

■ Set where on your computer your Web pages or onscreen presentation are stored

#### Tips

■ Writing and presenting an onscreen presentation

■

### Change the look of your Web page

1. On the File menu, click Publish For Web.
2. On the Publish tab, click the On My Computer box, and then click the program you want to use to preview your Web page.
3. Under Presentation Scheme Set, click a different scheme.
4. Under Layout, click a different layout.  
The names specify where pictures and the table of contents (or navigation) go on your Web pages.  
**Note:** This option is not available for letters, memos, faxes, or press releases.
5. Click OK to publish your document to a Web page.
6. If you chose "Preview using *i publish*", you can use the toolbar to quickly change the Presentation Scheme Set and the Layout.  
Click Close to return to the main *i publish* window.
7. If you've already posted your Web page to the World Wide Web, you'll need to post it again.

■ How?

### More Information

#### What if...

- You updated your Web document, but the changes don't show up on the Web?

#### You can also...

- Use Internet Explorer or Netscape Navigator to view your Web pages
- Set where on your computer your Web pages or onscreen presentation are stored

#### Concepts

- What happens when you Publish for Web?
- How does *i publish* create your Web address (URL)?

■

### Change the look of your onscreen presentation

1. On the File menu, click Publish For Screen.
2. On the Publish tab, under Presentation Scheme Set, click a different scheme.
3. To view your onscreen presentation using *i publish*, click View Presentation.  
**Note:** This option is only available if you have Internet Explorer 3.02 or later installed.
4. Click OK to publish your document as an onscreen presentation.
5. If you chose "View Presentation", you can click through your presentation to see how you like it.  
When you're done, press the ESC key to return to the main *i publish* window.

### More Information

#### What if...

- [i publish won't be installed on the computer you're using for your presentation?](#)

#### You can also...

- [Set where on your computer your Web pages or onscreen presentation are stored](#)

#### Tips

- [Writing and presenting an onscreen presentation](#)

### Print your brochure on both sides of the paper using your desktop printer

1. Print the first page of your brochure.

● How?

2. Put that printout back into your printer paper tray (typically face up, with the top edge facing left), and then print the second page of your brochure.

You probably will have to experiment or refer to your printer documentation to be sure about whether to place your printout face up or down.

**Tip:** Until you're sure about which way to place your printout, print your document as black and white, so you don't waste your expensive color cartridges. Then, when you're ready, switch back to color.

● How?

### More Information

#### What if...

- Nothing happens when you choose Publish to Printer?
- Your pictures don't look smooth in your printout?

#### You can also...

- Set page options

### ■ **Send your document to *i press* to be printed**

If you want high-resolution printouts of your document, you can send your document to *i press*, and then printouts will be mailed back to you.

**Note:** The *i press* printer's margins may slightly vary from your desktop printer's margins. This slight variation may subtly alter the placement of page elements; however, *i publish* automatically formats the page to look good on any printer.

1. Before you send your document, print a draft of it. Check it for typos and ensure it's just the way you want it.

#### ■ How?

2. On the Publish tab, click *i press*.
3. In the form that appears, enter your order information, including the type of paper you want, the number of copies, whether your document should be copied back-to-back, and so on.  
This form also covers how quickly your order can be printed and mailed back to you.
4. When you're done, press the Print This Form button so you can fax it or send it through the mail.
5. If your file is 2 MB (megabytes) or smaller, send it to *i press* through email.

#### ■ How?

If your file is larger than 2MB, split it across as many floppy disks as necessary. Mail the floppy disks and the printed form (from Step 4) to *i press*.

#### ■ How do you split a file across floppy disks?

■

### What do you want shortcuts for?

- Dragging and dropping
- Highlighting and selecting
- Moving your insertion point in *i publish*
- Working with text
- Viewing your document
- Managing files (New, Open, Save...)
- Miscellaneous things

•

**What do you want to do?**

- Highlight text with the mouse
- Highlight a character or a word with the keyboard
- Highlight lines of text with the keyboard
- Highlight paragraphs and components with the keyboard
- Select compound components

■

**Where do you want to move your insertion point?**

- To a character or a word
- To a line of text
- To a paragraph or component
- From component to component

- 

**What do you want to do?**

- Format highlighted text
- Cut, copy, and paste highlighted text
- Delete text
- Find text and check spelling

## Shortcuts in *i publish*

### Shortcuts: Dragging and dropping

#### Drag and drop between two programs

- Dragging and dropping between two programs can be hard if you have to resize the windows so they fit side-by-side on your screen. A faster way is to use the Windows taskbar (at the bottom of your screen).

#### ■ How?

#### Move text, pictures, or a component

- Drag them from one location to another on the *i publish* page.

#### Copy text, pictures, or a component

- Press CTRL while you drag them from one location to another on the *i publish* page.  
-Or-

Drag them using the right mouse button (instead of the left mouse button), and *i publish* will ask you if you want to move or copy the text, picture, or component.

*To undo the drop, press CTRL+Z.*

*If you start to drag something, and then change your mind, with your finger still on the mouse button, press the ESC key.*

### Shortcuts: Highlighting text with the mouse

To highlight	Click
A single word	Double-click the word.
A paragraph	Triple-click the paragraph.
Section of text	Drag the insertion point across the text you want to highlight. -Or- <ol style="list-style-type: none"><li>1. Place the insertion point at the beginning of the text you want to highlight.</li><li>2. Hold down the SHIFT key, and then click at the end of the text. Or, press the arrow keys.</li><li>3. Release the SHIFT key.</li></ol>

**Note:** You can only highlight text within a single component.

### Shortcuts: Highlighting a character or a word with the keyboard

To highlight	Press
Left one character	SHIFT+ LEFT ARROW
Left to the beginning of a word	CTRL+SHIFT+ LEFT ARROW
Right one character	SHIFT+ RIGHT ARROW
Right to the end of a word	CTRL+SHIFT+ RIGHT ARROW

### Shortcuts: Highlighting paragraphs and components with the keyboard

To highlight	Press
Up to the beginning of a paragraph	CTRL+SHIFT+ UP ARROW
Up to the beginning of a text component	CTRL+SHIFT+ HOME
Down to the end of a paragraph	CTRL+SHIFT+ DOWN ARROW
Down to the end of a text component	CTRL+SHIFT+ END
All text in a text component	CTRL+A

### Shortcuts: Highlighting lines of text with the keyboard

To highlight	Press
Left to the beginning of a line	SHIFT+HOME
Right to the end of a line	SHIFT+END
Up one line	SHIFT+ UP ARROW

Down one line	SHIFT+ DOWN ARROW
---------------	----------------------

### Shortcuts: Moving your insertion point to a character or a word

To move	Press
Left one character	LEFT ARROW
Left to the beginning of a word	CTRL+ LEFT ARROW
Right one character	RIGHT ARROW
Right to the end of a word	CTRL+ RIGHT ARROW

### Shortcuts: Moving your insertion point to a line of text

To move	Press
Left to the beginning of a line	HOME
Right to the end of a line	END
Up one line	UP ARROW
Down one line	DOWN ARROW

### Shortcuts: Moving your insertion point to a paragraph or component

To move	Press
Left one screen	CTRL+ PAGE UP
Right one screen	CTRL+ PAGE DOWN
Up to the beginning of a paragraph	CTRL+ UP ARROW
Up to the beginning of a text component	CTRL+HOME

Down to the end of a paragraph      CTRL+  
DOWN  
ARROW

Down to the end of a text component      CTRL+END

### Shortcuts: Formatting highlighted text

To apply	Press
Bold	CTRL+B
Underline	CTRL+U
Italic	CTRL+I
Apply a style	<ol style="list-style-type: none"><li>1. Highlight the text that you want to apply a style to.</li><li>2. Press CTRL+SHIFT+S to activate the Styles box on the toolbar.</li><li>3. Use the Up or Down arrow key to pick a style.</li><li>4. Press ENTER to apply the style to the highlighted text.</li></ol>

### Shortcuts: Cutting, copying, and pasting highlighted text

To	Press
Copy	CTRL+C
Cut	CTRL+X
Paste	CTRL+V

If you are copying and pasting into an intelligent component:

1. Point to it, and then click the right mouse button (right-click). Or, press SHIFT+F10.
2. On the popup menu, click Copy.
3. Right-click the component where you want it, and then click Paste.

### Shortcuts: Deleting text

To delete	Press
Left one character	BACKSPACE
Right one character	DELETE
Next word	CTRL+DEL
Previous word	CTRL+BACKSPACE
Selected text	DELETE or BACKSPACE

### Shortcuts: Managing files (New, Open, Save...)

To	Press
Create a new document	CTRL+N
Open an existing document	CTRL+O  Or, on the File menu, click a file at the bottom of the menu.
Get help	F1
Save your document	CTRL+S
Save your document with a different name (Save As)	F12
Check the spelling in your document	F7
Print your document	CTRL+P
Exit <i>i publish</i>	ALT+F4

### Shortcuts: Miscellaneous things

To	Press
Activate the <i>i publish</i> menu bar	F10
Move the focus back and forth between the	F6 SHIFT+F6

Control window  
(screen left) and the  
Document window

Expand the *i publish*  
window to take up the  
entire screen ALT+F10

Refresh an HTML page  
at screen left F5

Display an intelligent  
component's right-  
click (or popup) menu Shift+F10

### Shortcuts: Viewing the page

You can choose from several different views of your document. When you first open a document, *i publish* displays it at the last zoom that you used.

To	Press
Go to the next page	PAGE DOWN
Go to the previous page	PAGE UP
Scroll to the right	CTRL+PAGE DOWN
Scroll to the left	CTRL+PAGE UP
Zoom in	CTRL+SHIFT and = (equals)
Zoom out	CTRL and - (minus)
Go back to the previous zoom setting	F9
View the whole page	CTRL+W
View the document at 100%	CTRL+1

### Shortcuts: Finding text and checking spelling

To	Press
Find text	CTRL+F
Replace text	CTRL+H
Check the spelling in	F7

your document

### Shortcuts: Zooming in or out

To zoom	Press
Zoom in	CTRL and +
Zoom out	CTRL and - (minus)
Whole Page	CTRL+W
50%	CTRL+5
75%	CTRL+7
100%	CTRL+1
200%	CTRL+2
400%	CTRL+4
Go back to the last zoom setting	F9

### Shortcuts: Selecting compound components

Try one of the following:

- Point to any part of the component, and then click the right mouse button. On the popup menu, point to Select, and then click the component you want.  
If there is more than one component on the menu, the last component is the one that contains all the other listed components. For example, the Item component contains the Picture component.
- Each compound component has a spot (shown as a red dot below) where you can click to select the compound component. You may need to experiment to find the exact spot.

You can also press SHIFT+F10 to display the popup menu.

### Shortcuts: Moving from component to component

To move to	Press
Component to the right	ALT+ RIGHT ARROW
Component to the left	ALT+ LEFT ARROW
Component above	ALT+ UP ARROW
Component below	ALT+ DOWN ARROW
Next component	CTRL+TAB
Previous component	CTRL+ SHIFT+TAB

### Shortcuts: Viewing pages on the Web

To do this	Do this
Move backward or forward	Click these buttons at the top of the screen. 
View a specific Web site	<ol style="list-style-type: none"><li>1. On the File menu, click Open Web Page Location.</li><li>2. Type the Web site that you want, and then click OK.</li></ol>
View the Design Intelligence Web site	On the Navigate menu, click Go To Design Intelligence Web Site.
Stop a Web page while it's loading	Click this button at the top of the screen. 
View only the control window (at screen left)	On the View menu, click Control Window Only.
View only your	On the View menu,

*i publish*  
document

click Document  
Window Only.

View the control  
window and your  
*i publish*  
document

On the View menu,  
click Document and  
Control Windows.

### **Shortcuts: Adding a caption to a picture**

Do one of the following:

- Drag a small section of text onto the picture.  
*i publish* automatically converts the text into a picture caption.
- Point to the picture, and then click the right mouse button. On the popup menu, point to Insert Component, and then click Caption.

You can also press SHIFT+F10 to display the popup menu.

### **Shortcuts: Adding a picture to a document**

Do one of the following:

- Drag a picture file onto the document.
- Point to the text in your document, and then click the right mouse button. On the popup menu, point to Insert Component, and then click Picture.  
If you don't see Picture on the list, then the component you pointed to cannot accept a picture. Try pointing to a different component.

You can also press SHIFT+F10 to display the popup menu.

### **Shortcuts: Playing an onscreen presentation**

- To close your presentation and get back to *i publish*, press Alt+F4 or Esc.

Path:

Add, replace, or change something

ADD OR CHANGE TABLES, CHARTS, OR DIAGRAMS

■

### **Add or replace a table, chart, or diagram in a picture component**

1. In another program, create the table, chart, or diagram.
2. In the other program, select the object, and then click Copy on the Edit menu.
3. In your *i publish* document, click a gray box or an existing picture or object where you want to put the object.
4. On the Edit menu, click Paste Special.
5. Click OK.

The object appears in your document.

### **More Information**

#### **What if...**

- You couldn't add a table, chart, or diagram this way?
- The Paste Special command isn't available?
- The changes you made to the OLE object don't show up in *i publish*?
- The File menu of the source program doesn't have an Exit & Return command?

#### **Concepts**

- What's OLE?
- What programs support OLE?

#### **You can also...**

- Make the colors in the table, chart, or diagram match your color scheme

■

### Add or replace a table, chart, or diagram so text wraps around it

1. In another program, create the table, chart, or diagram.
2. In the other program, select the object, and then click Copy on the Edit menu.
3. Click a paragraph.
4. On the Edit menu, click Paste Special.
5. Click OK.

The object appears in your document.

**Note:** The object will appear below the paragraph you clicked. Wherever you move the paragraph, the object stays with it.

**Note:** For many documents, you can change where pictures, pull quotes, or sidebars appear on the page.

■ How?

### More Information

#### What if...

- You couldn't add a table, chart, or diagram this way?
- The Paste Special command isn't available?
- The changes you made to the table, chart or diagram don't show up when you get it into *i publish*?
- The File menu of the source program doesn't have an Exit & Return command?

#### Concepts

- What's OLE?
- What programs support OLE?

#### You can also...

- Make the colors in the table, chart, or diagram match your color scheme

### **Change the look of a table, chart, or diagram**

1. Double-click the table, chart, or diagram to open it.
2. Edit the object.
3. To return to your *i publish* document, on the File menu, click Exit & Return or Close.

### **More Information**

#### **What if...**

- The changes you made to the OLE object don't show up in *i publish*?

#### **You can also...**

- Make the colors in the OLE object match your color scheme

### **Delete a table, chart, or diagram**

1. Click the table, chart, or diagram.
2. To delete the object but leave an empty Picture component in your document, click Clear on the Edit menu.  
To delete the object and the Picture component, click Delete on the Edit menu.

*To restore the table to your document, press CTRL+Z.*

### Preview your table, chart, or diagram before you add it

1. On the *i publish* File menu, click Open Existing Document.
2. Click the Files Of Type box, and then click All Files (\*.\*) .
3. Find the file you want to preview, and then click Open.

#### How?

4. Click OK in the message that appears.  
The object file opens in its original program at screen left.
5. To return to the *i publish* tabs,  
click this button as  
many times as  
necessary. (It's at  
the top of the  
screen.)

### More Information

#### What's next?

Add a table, chart, or diagram

### **Move or copy a table, chart, or diagram to a gray box**

1. Click the table, chart, or diagram.
2. On the Edit menu, click Cut or Copy.
3. If necessary, scroll to the page you want to add the object to.

#### How?

4. Click the gray box or a picture you want to replace.
5. On the Edit menu, click Paste.

### **Move or copy a table, chart, or diagram so text wraps around it**

1. Click the table, chart, or diagram.
2. On the Edit menu, click Cut or Copy.
3. If necessary, scroll to the page you want to add the object to.

How?

4. Click a paragraph.
5. On the Edit menu, click Paste.

**Note:** The object will appear below the paragraph you clicked. Wherever you move the paragraph, the object stays with it.

**Note:** For many documents, you can change where pictures, pull quotes, or sidebars appear on the page.

How?

## Type text

1. Click an empty text component or click within text at the place you want to start typing.  
*i publish* highlights any placeholder text.
2. Zoom in if you need to.
3. Type your text.  
The text you type replaces the placeholder text.  
To see how your text looks, click outside the text component in which you are typing.

## More Information

### What if...

- The title changes size as you type?
- Your text is too small?

### You can also...

- Create a heading or title
- Add a bulleted list

### Shortcuts

- Highlighting text
- Moving your insertion point in text
- Formatting highlighted text

■

### **Copy or move highlighted text from another *i publish* document**

To move pictures or text between two *i publish* documents, you need to have two copies of *i publish* open at the same time.

1. With *i publish* already running on your screen, open *i publish* again.
  - How?
2. In the second copy of *i publish*, open the *i publish* document that contains the text you want.
3. Highlight the text you want.
4. On the Edit menu, click Copy or Cut.
5. In the first copy of *i publish*, do one of the following:
  - Click a text component.
  - Place the insertion point in existing text.
  - Highlight text you want to replace.
6. On the Edit menu, click Paste.

■

*If the text didn't go where you wanted, press CTRL+Z to undo it.*

|

### **More Information**

- You pasted text in *i publish* and nothing happened?

#### **You can also...**

- Reorganize components

#### **Shortcuts**

- Dragging and dropping

#### **Concept**

- Drag and drop rules (these apply to Paste too)

### Copy highlighted text from a disk (floppy, hard, CD-ROM)

You can copy text from your computer, a floppy disk, a CD-ROM, or a server.

1. On the *i publish* File menu, click Open Existing Document.
2. Click the Files Of Type box, and then click All Files (\*.\*) .
3. Find the file you want, and then click Open.

#### How?

4. Click OK in the message that appears.  
The text file opens in its original program at screen left.
5. Highlight the text you want.
6. Drag the text over a text component, and then drop it. (Watch your pointer.)

#### How?

Can't drop it.      Can drop it.

**Note:** If the text doesn't appear, then the other program may not support drag and drop. Try copy and paste instead.

7. To return to the *i publish* tabs, click this button as many times as necessary. (It's at the top of the screen.)

If the text didn't go where you wanted, press CTRL+Z to undo it.

### Concept

- Drag and drop rules

■

### Add a text file from a disk (floppy, hard, CD-ROM)

You can import a text file from your computer, a floppy disk, a CD-ROM, or a server.

1. Click the text component where you want the text.
2. Click the Grab tab at screen left, and then click Text File.
3. Find the file that contains the text you want.

■ How?

**Tip:** Split up the text between multiple text components: open the program, open the file, and then drag highlighted text one portion at a time.

■ How?

■

*If the text didn't go where you wanted, press CTRL+Z to undo it.*

,

### More Information

#### What if...

- You can't drag text from Microsoft Word and drop it into *i publish*?
- You can't see your floppy drive or CD-ROM drive in Windows Explorer?
- Text that was in the original text file doesn't appear in *i publish*?
- You can't drag your text onto the page?

#### What's next?

- Create a heading or title
- Add a bulleted list

#### Shortcuts

- Dragging and dropping

#### Concept

- Drag and drop rules
- Text formats *i publish* imports

### **Add a special character or symbol**

1. Zoom in if you need to.

#### How?

2. Click within text where you want to put the symbol.
3. On the Insert menu, click Symbol.
4. Click the symbol you want, click Select, and then click Copy.  
To add a sequence of symbols, repeat this step until you have all the symbols you want.
5. Click Close.
6. On the Edit menu, click Paste.  
*i publish* pastes the symbol(s) into your document at the insertion point.

■

### Add a drop cap

1. Click the Design tab at screen left, and then click the Paragraphs tab.
2. On the Paragraphs tab, click a scheme that contains drop caps.

■

*If you don't like the new paragraph scheme, press CTRL+Z to undo it or click a different scheme.*

|

### More Information

#### Concepts

■

What's a drop cap?

■

### Add a pull quote

1. Point to the main text of your document, and then click the right mouse button.

■ What's an intelligent component?

2. On the popup menu, point to Insert Component, and then click Pull Quote.

If the Pull Quote component is not on the list, it means pull quotes are not available for the type of document you're creating.

*i publish* places the pull quote based on the current layout, but in many cases, you can drag it to a new spot.

4. Copy and paste a quote from the body text into the Pull Quote component.

|

### More Information

#### You can also

■ Move intelligent components on the page

#### Concepts

■ What's a pull quote?

### Add a table of contents

1. On the first page, point to an area that doesn't contain components, and then click the right mouse button.

2. On the popup menu, point to Insert Component, and then click Table of Contents.

If the Table of Contents component is not on the list, it means table of contents are not available for the layout or type of document you're creating.

*i publish* places the table of contents based on the current layout, and automatically generates the appropriate entries and page numbers.

**Shortcut:** Press SHIFT+F10 to display the popup menu.

### Delete a table of contents

1. Point to the table of contents, and then click the right mouse button.
2. On the popup menu, point to Select, and then click the component you want.  
If there is more than one component on the menu, the last component is the one that contains all the other listed components.  
*i publish* places a border around what will be deleted.
3. On the Edit menu, click Delete.  
*i publish* removes all the text, the picture if there is one, and the intelligent component, too.

**Shortcut:** Press SHIFT+F10 to display the popup menu.

*If you deleted more than you expected, press CTRL+Z.*

### More Information

#### Shortcuts

Selecting compound components

### Add a caption to a picture

1. Point to the picture, and then click the right mouse button.
  2. On the popup menu, point to Insert Component, and then click Caption.  
If you don't see the Caption component on the list, then a Caption component is not available for the current picture. For example, your company logo wouldn't have a caption.
  3. Zoom in if you need to.
- How?
4. Click the Caption component, and then type your text.

**Shortcut:** Press SHIFT+F10 to display the popup menu.

### Copy or move text in the same document

1. Highlight the text.
2. On the Edit menu, click Copy or Cut.
3. If necessary, scroll to the page you want to add the text to.
  - How?
4. Click the text component or place the insertion point in the text, and then click Paste on the Edit menu.

### More Information

#### What if...

- You pasted text in *i publish* and nothing happened?

#### You can also...

- Move intelligent components on the page
- Reorganize components

#### Shortcuts

- Cutting, copying, and pasting highlighted text
- Dragging and dropping

### **Delete highlighted text**

1. Highlight the text you want to delete.
2. Press the DELETE or BACKSPACE key.

*To bring back the deleted text,  
press CTRL+Z before you take any  
other action.*

■

### **Delete the text and its intelligent component**

When you delete a text component, you remove both the component and its contents.

1. Click the text component you want to remove.
2. On the Edit menu, click Delete Text Component.

■

*If you deleted more than you expected, press CTRL+Z to undo it.*

|

### **More Information**

#### **What if...**

- You want to delete a component, but only part of it was deleted?

#### **You can also...**

- Delete the text, but not its component

### Find text in your document

1. If you want to search specific text, highlight that text. Otherwise, *i publish* searches the entire document starting with the current page.
2. On the Edit menu, click Find.
3. In the Find box, type the text you want to find.
4. Click Find Next.
5. When you're finished, click Cancel.

### More Information

#### What if...

- You want to search specific text only?
- You're unsure of how to spell the words you're looking for?

#### You can also...

- Search more efficiently

■

### Find and replace text in your document

1. If you want to search specific text, highlight that text. Otherwise, *i publish* searches the entire document starting with the current page.
2. On the Edit menu, click Replace.
3. In the Find What box, type the text you want to find.
4. In the Replace With box, type the replacement text.  
**Tip:** To delete the text you're searching for, leave this box empty.
5. Click Find Next to find the next occurrence of the text.
6. Do one of the following:
  - To change the found text, click Replace.
  - To change all occurrences of the found text, click Replace All.
  - To continue searching without replacing the selected text, click Find Next.
7. When you're finished, click Cancel.

■

*If you replaced the wrong text,  
press CTRL+Z to undo the  
replacement.*

|

### More Information

#### What if...

- You want to search specific text only?
- You're unsure of how to spell the words you're looking for?

#### You can also...

- Search more efficiently

### Check the document for misspellings

1. If you want to check specific text, highlight that text. Otherwise, *i publish* checks the entire document starting with the current page.
2. On the Edit menu, click Spelling.  
When *i publish* finds a word that isn't in the current dictionary, it highlights the word and lists suggestions.
3. Do one of the following:
  - To use a suggestion, click it, then click Change.
  - To change all occurrences of the word to the suggested word, click Change All.
  - To type the word you want, highlight the word in the Change To box, type the word, and then click Change.
  - To have *i publish* move on without changing the word, click Ignore. To ignore all occurrences of the word, click Ignore All.

### More Information

#### What if...

- You want to change the current dictionary
- *i publish* keeps listing words, abbreviations, or acronyms you don't want to change?
- There's no Spelling option on the menu?

■

### Preview your text before you add it

You can preview text that you stored on your computer, a floppy disk, a CD-ROM, or a server.

1. On the *i publish* File menu, click Open Existing Document.
2. Click the Files Of Type box, and then click All Files (\*.\*) .
3. Find the file you want to preview, and then click Open.

■

#### How?

A message appears telling you that the file isn't an *i publish* file.

**Note:** This works for any program that is also an OLE (object linking and embedding) server.

4. Click OK.  
The text file opens in its original program at screen left.
5. To return to the  
*i publish* tabs,  
click this button as  
many times as  
necessary. (It's at  
the top of the  
screen.)

|

### More Information

#### What's next?

■

#### Add text

#### What if...

■

#### You can't see your floppy drive or CD-ROM drive in Windows Explorer?

### **Apply color to highlighted text**

1. Highlight the text you want to apply color to.
2. On the toolbar, click the button below.

3. Click the color you want to use, or click Other to create a custom color.
- How do you create a custom color?

### Add a header or footer

Headers and footers repeat on most pages in a document; however, in some cases they don't appear, like on a cover page. Headers and footers typically contain information like the page number and company name.

**Note:** If you want to change the document title that appears in the header or footer, change that text in the main title of your document. *i publish* will automatically display the updated title in the header or footer.

1. Point to the document where there are no components, and then click the right mouse button.

What's an intelligent component?

2. On the popup menu, point to Insert Component, and then click Header or Footer.

If you don't see the Header or Footer component on the list, then they are not available for this layout or type of document.

3. Click the Caption component, and then type your text.

**Shortcut:** Press SHIFT+F10 to display the popup menu.

■

### Change the style of text in a component

In *i publish*, styles are used in text components that can accept more than a single paragraph.

■ Want to know more?

1. Zoom in if you need to.

■ How?

2. Highlight the text.

3. Click the styles list at the top of the screen, and then click the style you want.

■

■  
*To remove the style, click the styles list, and then click Body Text.*

|

### More Information

■ What's a paragraph style?

#### Shortcuts

■ Applying styles

### Drag and drop text from the control window

You can open a file with text in the control window, and then drag and drop it into your document.

1. On the *i publish* File menu, click Open Existing Document.
2. Click the Files Of Type box, and then click All Files (\*.\*)).
3. Find the file you want to preview, and then click Open.

#### How?

A message appears telling you that the file isn't an *i publish* file.

**Note:** This works for any program that is also an OLE (object linking and embedding) server.

4. Click OK.  
The text file opens in its original program at screen left.
5. Highlight the text you want, and then click and hold the left mouse button.
6. Move your pointer to a text component.
7. Watch your pointer.

Can't drop it.

Can drop it.

8. To return to the *i publish* tabs, click this button as many times as necessary. (It's at the top of the screen.)

### More Information

#### What if...

You can't see your floppy drive or CD-ROM drive in Windows Explorer?

All procedures keystroked in FCR45 (2/20/97)

- 

**What if the whole intelligent component went away?**

- Press CTRL+Z to undo. When you try again, make sure that you click Clear on the Edit menu, not Delete.

- 

**What if the picture and its component went away?**

- Press CTRL+Z to undo. When you try again, make sure that you click Clear on the Edit menu, not Delete.

- 

**What if the whole text component went away?**

- Press CTRL+Z to undo. When you try again, make sure that you click Clear on the Edit menu, not Delete.

OLE

**What if you couldn't add a table, chart, or diagram this way?**

Check the other program's documentation to make sure that it supports OLE.

**What if the Paste Special command isn't available?**

You may not have chosen the Copy command in the program in which you created the table, chart, or diagram. Or, the program you copied from doesn't support OLE for this type of object.

**What if the changes you made to the OLE object don't show up in *i publish*?**

You may not have saved or updated the changes before you returned to *i publish*. After you click Exit & Return, make sure that you click Yes when you're asked whether you want to update the object.

**What if the File menu of the source program doesn't have an Exit & Return command?**

Some programs may use different wording for the command. If it's not obvious which command to use, see the manual or online help for that program.

■

### **What if you can't drag your text onto the page?**

One of the following may be the problem:

- You might have a picture component selected. Click a text component and try again.
- You may be trying to drop a lot of text on a component that can only hold a small amount of text, such as a title. Try dropping the text onto a different text component.
- What are the rules for drag and drop?
- The text's format may not be supported by *i publish*. Try saving it in a format that *i publish* supports.
- What text formats are supported?

■

### **What if you can't drag your picture onto the page?**

One of the following may be the problem:

- You might be trying to drag the picture onto a text component that can't accept a picture, like a title. Try dragging the picture onto a different text component or onto a picture component (gray box).
- The picture's format may not be supported by *i publish*. Try saving it in a format that *i publish* supports.
- What picture formats are supported?

**What if the text looks the same after you changed it?**

You may not have highlighted the text before you tried to change it. Highlight the text, and then try changing it.

**What if the colors or graphic effects look the same after you changed them?**

Colors and graphic effects have sliders that set how much color and effects are applied.

1. On the Design menu, click Schemes.
2. Click the Level tab.
3. Under Colors Used or Graphic Effects Used, drag the slider further to the right.

**What if you have a black and white printer, so you don't want to use color in your document?**

The colors schemes have a slider that set how much color is applied to your document—you can turn the color off.

1. On the Design menu, click Schemes.
2. Click the Level tab.
3. Under Colors Used, drag the slider all the way to the left to "Off."

- 

### **What if text prints as gray or black on your color printer?**

- Many people set their color printers to convert colors to shades of gray so that printing is faster. Check it out:
  1. On the File menu, click Publish to Printer.
  2. Under Printer, click Properties.
  3. Check the settings to see if they're set to print in black and white colors (sometimes called grayscale).
- If you use more than one printer, you may be printing to a non-color printer. Check it out:
  1. On the File menu, click Publish to Printer.
  2. Under Printer, check what printer you're using.  
If necessary, switch to the color printer.

■

### **What if you can't see anything after you zoom in?**

Scroll up, down, or side-to-side, because you may be looking at a blank area of your page.

Or, you may not have clicked the text or picture before you zoomed. When nothing is selected, *i publish* zooms to the top, left corner of the current page. Zoom out, then click the text or picture and try zooming in again.

- To zoom in, press CTRL+SHIFT and the = (equals) key.
- To zoom out, press CTRL and the - (minus) key.
- To go back to the last zoom setting, press F9.

■

### **What if your pictures don't look smooth?**

#### **Did you get your picture off the Web?**

Pictures you take from the Web are usually 72 dpi (dots per inch), so although they look fine on your screen, you may not be satisfied with their printed quality. Typically, pictures in a magazine or other printed documents are 300 dpi. Try using a higher resolution picture.

#### **Is your picture a bitmap?**

If you add a small bitmap to a large picture component, you may not get the results you want. *i publish* scales the bitmap to fit the space, which may cause the bitmap to look grainy. (*i publish* always scales it proportionally though.) Try saving the bitmap in a different file format.

#### **Are you creating an onscreen presentation?**

If your pictures don't look smooth in your onscreen presentation, try one of the following:

- Use higher resolution pictures in your *i publish* document, so that when *i publish* enlarges them for the screen, they still have enough resolution to look good.
- If you've tightly cropped the picture, try uncropping it to show more of the picture.
- How?

**What if you clicked and typed text, but you don't see your text anywhere?**

You may have clicked a picture component or the entire document. Zoom in by pressing CTRL+SHIFT and the = (equals) key, click a text component, and then try typing your text again.

### **What if the styles list isn't available?**

One of the following may be the problem:

- You might have a picture component selected. Click a text component and try again.
- You can only apply a style to a paragraph in a text component that can hold a lot of text. You may have a single paragraph text component selected, such as a title.

■

**What if the control window (at screen left) has no buttons or tabs in it?**

You probably installed *i publish* before you installed Microsoft Internet Explorer.

**To solve the problem:**

1. In Windows Explorer, open this folder: C:\Program Files\Design Intelligence\ipublish\Program.
2. Double-click the INSTFIX.EXE file.

If the INSTFIX.EXE program finds that you have an older version of Internet Explorer, it displays a list of outdated files. You should use Microsoft Internet Explorer 3.02 or later.

**If you have an older version of Internet Explorer:**

1. Download and install Internet Explorer.

■ How?

2. In Windows Explorer, open this folder: C:\Program Files\Design Intelligence\ipublish\Program.
3. Double-click the INSTFIX.EXE file.

■

## **What if you updated your Web page, but the changes didn't show up in your Web browser?**

### **Using Internet Explorer**

To be able to display pages quickly, your browser has a "cache" where it stores Web pages that you've already looked at. Sometimes you have to tell your browser to reload or refresh a page.

- Click this button.

### **Using Netscape**

Try Netscape's Refresh button first. If that doesn't work, it could be because Netscape sometimes has trouble refreshing Web pages that use HTML frames. Try this:

1. Click  to minimize your Netscape window.
2. Click Netscape in the Windows taskbar (at the bottom of your screen) to display it again. You should now see your updated Web page.

**What if the scheme changes in just one part of your document?**

Make sure that you just click the scheme—if you drag and drop the scheme, it applies only to the component that you dropped it on.

### **What if the title changes size as you type?**

As you type text into a title, *i publish* formats the text so that it fills the line. As you add more text, *i publish* reduces the size of your text. If you add too much text to fit on one line, *i publish* moves text to the next line and increases the text size so that both text lines fill the title space.

### **How does *i publish* handle imported fields, footnotes, and end notes?**

In general, if you have fields, footnotes, or end notes in your original text file, those will not show up in *i publish*.

- 

**What if there's no Spelling option on the menu?**

You may be in outline view, switch back to document view, and try again. You can't check your spelling in outline view, because it doesn't show you all of your text.

- At the bottom of your screen, click the Document tab.

### **What if *i publish* crashes when you run Netscape Navigator or Microsoft Exchange?**

If your program crashes when running *i publish* with Netscape Navigator or Microsoft Exchange, you may need to change the virtual memory setting for Windows.

1. Click the Windows Start button.
2. Point to Settings, and then click Control Panel.
3. Double-click System.
4. Click the Performance tab.
5. Under Advanced Settings, click Virtual Memory.
6. Make sure that "Let Windows Manage My Virtual Memory Settings (Recommended)" is selected.  
This allows Windows to automatically shrink or grow the virtual memory based on usage.

•

### **What if nothing happens when you choose Publish to Printer?**

You need to be in document view to print your document.

If you're in outline view, click the Document tab at the bottom of the screen.

■

***i publish* minimum system requirements**

- 486 or faster processor
- 16 MB RAM (32 MB recommended)
- Windows 95 or Windows NT 4.0 (but not Windows 3.x or the Macintosh)
- 65 MB hard disk space
- SVGA Monitor (800 x 600 and high color) recommended
- Mouse or equivalent pointing device
- Microsoft Internet Explorer 3.02 or later recommended
- How do you get this version?

■

**What if you can't drag text or pictures from a program and drop it into *i publish*?**

The program may not work with the drag and drop feature, or the feature may be turned off. In that case, all you have to do is turn it on.

■ How do you do that in Microsoft Word?

**What if you can't drag text from Microsoft Word and drop it into *i publish*?**

If Microsoft Word's drag and drop feature is turned off, you cannot drag text out of Microsoft Word and drop it into your *i publish* document. To fix this:

1. On the Microsoft Word Tools menu, click Options.
2. Click the Edit tab.
3. Make sure that "Drag-and-Drop Text Editing" is checked.
4. Click OK.

**What if you pasted text in *i publish* and nothing happened?**

You may have tried to paste a lot of text into a component that could only hold a small amount of text. Try selecting a component that can hold more text (has a larger box), and try pasting the text again.

Or, the text may not have gotten copied or cut, so it can't be pasted. Try copying or cutting the text again.

■

**What if your tab stops used to look right, but now they don't?**

You may have switched your layout. If you switch from a 2-column layout to a 3-column layout, some of your tab stops may not be able to fit within the new column width. Try switching back to your previous layout.

■ How?

The Agenda document is formatted using tab stops, so if you change your layout to one with more columns, the tab stops will not look right. If this is the problem, switch back to the original layout.

Or, you may have changed your font scheme so that the font is larger, the tab stop positions may not be right for the new font. Try switching to a different font scheme.

■ How?

■

### **What if your text is too small?**

The font scheme you're using may not suit your document. Try switching to a different font scheme.

■ How?

Or, if you have a lot of text or pictures on a page, *i publish* automatically handles most situations by reducing the size of the text or pictures.

However, you can get to a point where *i publish* has to reduce your text to a font size that is smaller than you want. The reason this can happen is that *i publish* can't break some components across two pages, because that wouldn't look professional.

■ How can you tell when this happens, and how do you fix it?

**You're not sure how a word is spelled**

If you know how to spell part of a word, but not the entire word, type the portion of the word you're certain of. Then, make sure there is no checkmark in the Find Whole Words Only box before you begin your word search.

### **Ways to search more efficiently**

Do any of the following:

- To find a specific word, but ignore instances of that word within other words (for example, to find **let** but ignore **letter**), click the Find Whole Words Only box.
- To find text that matches the exact combination of capital and small letters you typed in the Find box, click the Match Case box.

**Prevent *i publish* from stopping at words, abbreviations, or acronyms that you don't want to change**

- To prevent *i publish* from stopping at a particular word or abbreviation each time it's found, click Add when the word appears in the Not In Dictionary box. (This adds the word to your custom dictionary. As long as you're using the same custom dictionary, *i publish* will never stop on that word again.)

■

### Why are there red boxes around some of your components?

In some cases, when too much text, pictures, or too many components are placed on a page, *i publish* has to do some work to attempt to fit them on the page.

When your page is very full, and one of the Fit Status meters (at the bottom of the screen) is in the red, *i publish* draws a thin red line around all components that may be contributing to the fit problem.

**Note:** If your page is so full that *i publish* can't accommodate the information, your text or picture may be clipped. In these cases, *i publish* draws a red box around that component, regardless of whether you have the option (below) turned off.

#### To turn this option off:

1. On the Edit menu, click Options.
2. Under General, click When Document Is Overfit, Highlight Contributing Components.
3. Click OK.

- How can you tell when your document is overfit?
- What should you do when your document is overfit?
- When is fitting an issue?

■

### **What if *i publish* is slow after you change your document?**

If *i publish* is taking too long to lay out your document, change the fit quality to Draft as you create your document, and then change it to Production when you're ready to print.

1. On the Edit menu, click Options.
2. Under Fit Quality, click the option you want:
  - **Production** precisely fits everything on the page. (Note: This option may make page layout slower.)
  - **Proof** lays out your page faster than Product, but slower than Draft.
  - **Draft** lays out the page quickly, but isn't as precise as Production or Proof.
3. Click OK.

- 

### **What if the text in your report is very small?**

If you add a lot of text to the Document Title component, *i publish* scales the font size of all of the text in the document. So, the point size of your body text may become too small. Try any of the following:

- Edit your title to make it shorter, and then click the main body text so that *i publish* can lay out your report again.
- Split up your title into:
  - Main title—Put this in the Document Title component.
  - Subtitle—Put this in the Subtitle component.
- The Subtitle component uses a smaller font, so it can accommodate more text than the Document Title component.
- Split up your title into:
  - Main title—Put this in the Document Title component.
  - Subtitle—Put this in the body text of your report, using a paragraph style: Heading 1, Section Head, or Deck Lead.
- How do you apply a paragraph style?

■

### **What if your text is clipped?**

Some components, like pull quotes and sidebars, can only hold a certain amount of text. If you add more text than it can hold, your text will be clipped, and *i publish* will draw a red box around it (indicating that it is too full). To fix this, try any of the following:

- Edit your text.
- Try changing the level of your graphic effects scheme. Or, try a different graphic effects, paragraph, or font scheme.
- How do you change the level of a graphic effects scheme?
- How do you change a scheme?
- Try a different layout that gives more room to the component.
- How?

■

### **What if there is too much white space next to your picture?**

If you add a picture that is very tall and narrow, *i publish* places it in the picture placeholder, but you may have a lot of white space next to the picture. To reduce the amount of white space:

- Reduce the height of your picture.
- How?
- Use a different picture.

■

### **What if there is a red box just around your picture?**

If you add a picture that is very tall and narrow, *i publish* may not be able to accommodate it. If it's larger than will fit in your document, *i publish* draws a red box around it to tell you that you need to do one of the following:

- Reduce the height of your picture.
- How?
- Use a different picture.

- 

**What if your Kodak PhotoCD picture is rotated?**

*i publish* brings in photos from a CD as is; *i publish* has no way of knowing that you want a different side to be the top of the picture. So, if the image is rotated in your PhotoCD viewer, it will still be rotated in *i publish*.

To fix this, import the photo into a graphics program, rotate it, and then save it.

- What picture formats are supported?

### **What if your Web page doesn't print well to a black and white printer?**

Some of the Web layouts have a bold background that looks great online. However, if you print it to a black and white printer, the printed background may be too dark. Black and white printers substitute black or dark gray for intense colors, so your Web page background may print very dark.

#### **To fix this:**

1. Temporarily publish your Web pages using a different color scheme, such as Parchment with Black and White.

● How?

2. Print your Web page.

● How?

3. Publish your Web pages again using the color scheme that you want for your Web site.

● How?

■

### **What if you got an out of disk space message while printing?**

#### **Were you printing directly to a printer?**

When you print your file, the printer software (driver) creates a temporary file on your computer's hard disk, and then the printer software sends the temporary file to the printer, using your network or your printer cable. When the complete temporary file is sent to the printer, the temporary file is removed from your hard disk.

If you don't have enough available disk space to create the temporary file, the printer software will display an error message. If disk space is the problem, delete any unnecessary files to create more available hard disk space.

You can also refer to your printer documentation for details.

#### **Were you printing to a file (to print on an outside printer)?**

When you print to a file, *i publish* uses the printer software (driver) to create a file:

- .prn file, if you're using a PCL printer.
- .ps file, if you're using a PostScript printer.

If you don't have enough available disk space to create the file, the printer software will display an error message. If disk space is the problem, delete any unnecessary files to create more available hard disk space.

You can also refer to your printer documentation for details.

- [Want to know more about printing your document on an outside printer?](#)

For additional details about printing, click Index and type **Print**, and then press ENTER.

**What if you got an error message while installing SPRYNET from the *i publish* CD?**

SPRYNET is an Internet service provider (ISP). You can install the SPRYNET software from the *i publish* CD, but it requires that your system be setup for Dial-Up Networking.

For details about how to change your system, see the SPRYNET Readme file located on the *i publish* CD:

D:\SPRYNET\CD\Readme.txt.

Search the SPRYNET Readme file for "DIAL-UP".

■

### About importing HTML files into *i publish*

When you import an HTML file into *i publish*, all of the text imports, but *i publish* cannot import the pictures or style sheet information. The reason *i publish* can't import the pictures is that HTML files include graphics using a file reference, such as:

```
<IMG SRC="../../art/art.gif">
```

*i publish* has no way of knowing if the picture file is on your computer, or if you got the HTML file from the Web, and the picture does not exist on your computer.

To include the text and pictures from an HTML Web page:

#### 1. Import the HTML file.

Where is the HTML file stored?

- On a Web site
- On your computer

#### 2. Import the picture.

Where is the picture file stored?

- On a Web site
- On your computer

**Why can't you change the colors of a picture inside *i publish*?**

*i publish* is designed to lay out your text and pictures. To change the color or color palette of a picture, use the program that created it, or another picture editing program. Then, add the picture to your *i publish* document again.

■

### **Why can't you resize an intelligent component?**

Because *i publish* is an automatic page layout program, the size and location of every object on the page is determined by the layout you choose. This is your guarantee of an attractive finished document. If you don't like the size or location of a picture, try another layout that appeals to you—there are lots to choose from.

Using Adjust Picture (Design menu), you can change the emphasis of a picture—thereby changing the picture's size.

■ How?

This applies only to pictures that are within wrapping text.

- 

### **What if you don't want lines between columns?**

The lines between columns come from the graphic effects scheme. Do one of the following:

- Use a different graphic effects scheme that doesn't have rules.
- How?
- Set the graphic effects scheme to Off.
- How?

### **What if your report text or logo changed after installing *i publish* 2.0?**

*i publish* 2.0 uses content linking, so it automatically ensures that your cover page title, report title, and header text all match.

If your title changed to something you don't want, simply change the title anywhere, and *i publish* will automatically update that information in all areas of your document.

What if you don't want the text on your cover page and title page to match?

### **What if you don't want the text or logo on your cover page and title page to match?**

*i publish* automatically makes the text and logo on your cover page, title page, and header match.

If you want them to differ: first change the layout of your document to use only a title page, and then create a different cover page document.

### **Change your document's layout to use only a title page**

1. On the toolbar, click the Layout button, shown below.

2. At the bottom of the list, click Custom Layout.
3. Under Cover Treatment, uncheck Cover Page.

### **Create a different cover page document**

1. On the File menu, click Create New Document.
2. Click Cover Page, and then click Next.
3. Click a template, and then click Next.
4. Click a scheme set, and then click Finish.

■

**What if two letters are dropped capped?**

Anytime you have a two letter word, *i publish* automatically applies the drop cap formatting to both.

If you don't like it, choose a paragraph scheme that doesn't use drop cap formatting.

■ How?

■

### **What if my quotes or apostrophes are dropped capped?**

Anytime a quote or an apostrophe is one of the first two letters of a paragraph, *i publish* automatically applies the drop cap formatting to it.

If you don't like it, choose a paragraph scheme that doesn't use drop cap formatting.

■ How?

### **How do you import Microsoft Word '97 files?**

Currently, *i publish* cannot import Microsoft Word '97 files. To import one of these files, save it in Word 6.0/95 format.

1. Open your Microsoft Word '97 document.
2. On the Word '97 File menu, click Save As.
3. For Save As Type, click "Word 6.0/95."
4. Type a name and folder for the document, and then click Save.
5. Add the file to your document.

■ How?

### **What if one of my brochure panels takes up 2/3 of the page width?**

By default, a brochure has 6 panels. If you delete one of the inside panels, the last panel will take up 2/3 of the page width.

#### ■ Want to know more about brochures?

#### **To add it back:**

1. Point to the panel that you want to be to the left of the new panel, and press the right mouse button.
2. On the popup menu, click Insert Component, and then click Panel.
3. Switch to outline view.

#### ■ How?

4. At the bottom of the outline, click  next to "Panel" to expand it.
5. Point to a Panel Block, and press the right mouse button.
6. On the popup menu, click Insert Component, and then click Picture, Text Block, or Sidebar.
7. Switch back to document view, and then add your text and pictures.

#### ■ How do you add text?

#### ■ How do you add pictures?

- 

**What if your computer is slow while running *i publish*?**

If your computer has 16 MB of RAM or less, your computer may slow down while running *i publish*. The reason is that the *i publish* control window (screen left) uses Microsoft Internet Explorer, and Internet Explorer requires at least 16 MB of RAM. So, that may be slowing down your computer.

**To fix this:**

- While you're editing your document, change your view to just show the document window. (On the View menu, click Document Window Only.)

■

### **What if the tabs in your Web page or onscreen presentation don't look right?**

When *i publish* converts your document to a Web page or onscreen presentation, it uses a fixed width space for each tab, because HTML doesn't use tabs. If your tabs don't align well in your online document, try this:

1. Set multiple tab stops at regular intervals, such as: .5", 1.0", 1.5", and so on.

If you've set tab stops for multiple paragraphs, apply the same tab stops to all of the paragraphs.

■ How?

2. Publish your document again as a Web page or an onscreen presentation.

■ How?

**Note:** The Agenda document is formatted using tab stops, so it may take some tweaking before your document looks the way you want as a Web page or an onscreen presentation.

- 

**What if you changed the font size for a Banner or Kicker component, but you don't see a change?**

Try any of the following:

- Try scaling each component that makes up the Banner or Kicker.
- How?
- Try reducing the amount of text in the component. *i publish* may be having trouble fitting the component in the allocated space.
- What else can you do to make a component fit?

■

**What if you changed the emphasis of your newsletter picture, but you don't see a change?**

If your layout has pictures at the left or right (not within columns of text), then *i publish* keeps the pictures the same size, but places the pictures in the order of emphasis. The picture with the most emphasis is placed first in the document, the picture with the next most emphasis is placed second, and so on.

If you want your pictures to be different sizes, under "Columns and Picture Placement," choose "Pictures Within Text Columns" in the Custom Layout dialog box.

■ How?

## Move between pages

To move between pages, click the scroll bar on the right side of the screen.

At the bottom of your screen, you'll see information telling you which page(s) you're looking at.

 Page 2 of 2

## More Information

### Shortcuts

- Viewing the page
- Zooming in or out

- 

### Zoom in or out

- To zoom in, press CTRL+SHIFT and the = (equals) key.
- To zoom out, press CTRL and the - (minus) key.
- To go back to the previous zoom setting, press F9.

### More Information

#### What if...

- You can't see anything after you zoom in?
- You want to scroll to another page

#### Shortcuts

- Viewing the page
- Zooming in or out

### Switch between document view and outline view

- At the bottom of your screen, click the appropriate tab.

### More Information

#### You can also...

- Reorganize components
- Edit text in outline view

## Reorganize components

You can reorganize and rearrange text and pictures in a newsletter, flier, catalog, bulletin, restaurant menu, or onscreen presentation using the Outline view.

1. To switch to Outline view, click the Outline tab at the bottom of the screen.

2. To expand a compound component to see its sub-components, click  next to that compound component.

**Tip:** Compound components are represented by a colored icon, and their names are in bold type.

3. Click the icon next to the component (not  or ) and drag it before or after other components in the list.

**Tip:** To make an Item or Story component the first one in the list, drop it on the "Item List" or "Stories" component.

When you drop an Item or Story component on another one, *i publish* places the dropped component **after** the one you dropped it on. For example, if you drop **B** onto **A**, *i publish* puts **A** first, and then **B** next.

4. To switch back to Document view, click the Document tab at the bottom of the screen.

## More Information

### You can also...

[Edit text in outline view](#)

### Edit text in outline view

1. If you haven't already done so, click the Outline tab at the bottom of the screen.

2. To expand a compound component to see its sub-components, click  next to that compound component.

**Tip:** Compound components are represented by a colored icon, and their names are in bold type.

3. Point to a text component, and then click the right mouse button.
4. On the popup menu, click Edit.
5. Type or edit your text, and then click OK.

**Shortcut:** Press SHIFT+F10 to display the popup menu.

### What do you want to do?

- Move between pages
- Zoom in or out
- Switch between document view and outline view
- View your document as a Web page or an onscreen presentation
- Change the *i publish* window
- What you want to do isn't listed here

Leave this paragraph here...for some (unknown) reason, it makes the next topic appear properly.

- 

**What do you want to do?**

- View your document as a Web page
- View your document as an onscreen presentation

- 

**What do you want to do?**

- See more of your document or the control window
- Make your document fill the screen
- Make the control window fill the screen

■

**Tips: Writing and presenting an onscreen presentation**

- Advantages of doing onscreen presentations
- Writing a presentation
- Preparing for your presentation
- Giving your presentation
- What's an onscreen presentation?

**Tips: Advantages of doing onscreen presentations**

When you do a presentation using a 35mm slide carousel or an overhead projector, you need to factor in a lot of lead time to print or develop your slides.

With an onscreen presentation, you can change your presentation up to the last minute. For example, you can customize your presentation by adding your client's company name. This personal touch could lead to future sales!

- 

### **Tips: Writing your presentation**

- How do you create an onscreen presentation?

#### **Use these ideas to organize your presentation**

- Beginning of presentation  
Tell them what you're going to tell them—Give an overview of your presentation.
- $\frac{1}{4}$  into presentation  
Present your key points. Make sure that you follow the outline you established in your presentation.
- $\frac{1}{2}$  into presentation  
Present the small details. Again, follow your outline.
- $\frac{3}{4}$  into presentation  
Tell them what you told them—Start wrapping up and hit your key points again.
- Ending of presentation  
Question—Leave a little time at the end for audience questions.

#### **Other tips to look professional**

- Spelling and proofing  
This might be the most important step towards looking professional. Check your spelling and have someone else read through it to be sure there are not grammatical errors.
- How do you check your document for misspellings?
- Keep it short  
Many presenters make the mistake of including every detail on the presentation slides. Just hit the highlights on your slides so that your audience doesn't spend a lot of time reading instead of listening.

■

### **Tips: Preparing for your presentation**

- Presentation notes—Print out your slides, and then make notes on them about what additional information you want to cover. You may not need this, but it will make you feel calm to know the information is available if you need it.
- How?
- Preview your presentation—Make sure you run all the way through your presentation to be sure it's just the way you want it.
- How?
- Practice makes perfect—Try practicing in front of a mirror to help you become comfortable. Practice hand gestures, walking away from the podium, and pointing at the screen.
- Audience handouts—Print out your slides and make copies for your audience so that your audience can focus on your message. (This also makes you look very professional.)
- How?

- 

### **Tips: Giving your presentation**

- How do you view your document as an onscreen presentation?

#### **Use these ideas to prepare and give your presentation**

- Arrive early—Make sure you have plenty of time to set up your computer and test it before people arrive.
- Talk slowly—Try talking more slowly than you think you should; you'll end up talking at normal speed.
- Rely on experts—If you're asked a question that you don't know, ask the audience for help. You don't have to be the only expert.
- Relax—you've prepared and practiced, so you will be able to make the impact you want.

■

### Add a Web address (URL)

To create a jump to another Web site or an FTP server address, type the full Web address (URL) anywhere in any document (except in To, From, or Date components). When *i publish* creates the Web page, it automatically creates the link for you.

*i publish* will automatically create a jump when you use any of the tags in this table.

#### Include this... Followed by this...

---

http://	Web site or Web page, such as: <ul style="list-style-type: none"><li>■ <a href="http://www.design-intelligence.com/">http://www.design-intelligence.com/</a></li><li>■ <a href="http://www.design-intelligence.com">www.design-intelligence.com</a></li><li>■ <a href="http://www.design-intelligence.com/support/support.html">http://www.design-intelligence.com/support/support.html</a></li></ul>
(This is optional if www is at the start.)	
NEWS:	Newsgroup, NNTP
MAILTO:	Email address, such as YourName@InternetProvider.com
(This is optional)	
TELNET:	Telnet (remote computer access)
GOPHER://	Gopher site (text info)
FTP://	FTP site (file transfer)

Or, if you want to use an *i publish* component, so that the Web address moves around your page intelligently as you change the layout:

1. Point to the component that you want to add a Web address to, and then click the right mouse button.
2. On the popup menu, point to Insert Component, and then click Web Address.  
If you don't see Web Address on the list, then this component cannot contain a Web Address component. You can still type your Web address, but *i publish* won't be able to turn it into a link in your Web page.
3. Zoom in if you need to.
  - [How?](#)
4. Click the Web Address component and type your Web address (also called a URL).

**Shortcut:** Press SHIFT+F10 to display the popup menu.

|

■

### Add a new picture component

1. Point to the component that you want to contain the picture component, and then click the right mouse button.
  - What's an intelligent component?
2. On the popup menu, point to Insert Component, and then click Picture.  
If you don't see the Picture component on the list, then a Picture component may not be available for the selected component.

**Shortcut:** Press SHIFT+F10 to display the popup menu.

,

### More Information

#### What's next?

- Add a picture
- Add a caption to your picture

### **Add a new component to hold a table, chart, or diagram**

If there is no place in your document for a new table, chart, or diagram, add a Picture component, and then fill it with your table, chart, or diagram.

1. Point to the component that you want to contain the table, chart, or diagram, and then click the right mouse button.

#### What's an intelligent component?

2. On the popup menu, point to Insert Component, and then click Picture.

If you don't see the Picture component on the list, then a Picture component is not available for the selected component.

**Shortcut:** Press SHIFT+F10 to display the popup menu.

### **More Information**

#### **What's next?**

#### Add a table, chart, or diagram

■

### Copy or move a component (such as a picture or a sidebar) within wrapping text

**Note:** For many documents, you can change where pictures, pull quotes, or sidebars appear on the page.

■ How?

#### Select the component

1. Point to the component, and then click the right mouse button. (Or press SHIFT+F10.)
2. On the popup menu, point to Select, and then click the component you want.  
If there is more than one component on the menu, the last component is the one that contains all the other listed components.

Depending on how you like to work, you can either drag the component to the new paragraph, or use Copy and Paste.

#### Drag the component onto a different paragraph

■ With the component selected, drag the component's **border** onto a paragraph, and then drop it. (Watch your pointer.)

To copy the component, press CTRL while you drag the component's border.

■

Can't drop it.

Can drop it.

**Note:** The component will stay near the paragraph you dropped it onto. Wherever you move the paragraph, the component stays with it.

*i publish* places the component based on the current layout.

#### Copy or paste the component onto a different paragraph

1. With the component selected, on the Edit menu, click Copy or Cut.
2. If necessary, scroll to the page you want to add the component to.

■ How?

3. Click a paragraph.
4. On the Edit menu, click Paste.

**Note:** The component will appear near the paragraph you clicked. Wherever you move the paragraph, the component stays with it.

*i publish* places the component based on the current layout.

### **Move a component by changing the layout**

By changing the layout, you can dramatically change your document.

1. Click the Design tab at screen left.
2. Click the Layouts tab.
3. Scroll through the list of layouts, and then experiment by clicking until you find the one you like.  
Every time you click a layout, your document reflects the changes.

*If you don't like the layout, just  
click a different one.*

|

### **More Information**

**You can also...**

Find out what schemes and layout are applied to your document

### Copy or move a component into wrapping text in another document

1. With *i publish* already running in an open window, open *i publish* again.

#### ■ How?

2. In the second copy of *i publish*, open the *i publish* document that contains the component you want.
3. Point to the component, and then click the right mouse button. (Or press SHIFT+F10.)
4. On the popup menu, point to Select, and then click the component you want.  
If there is more than one component on the menu, the last component is the one that contains all the other listed components.
5. On the Edit menu, click Copy or Cut.
6. Display the *i publish* document that you want to add the component to.
7. Click a paragraph.
8. On the Edit menu, click Paste.

**Note:** The component will appear below the paragraph you clicked. Wherever you move the paragraph, the component stays with it.

*i publish* places the component based on the current layout.

**Note:** For many documents, you can change where pictures, pull quotes, or sidebars appear on the page.

#### ■ How?

*If you don't like where the  
component landed, press CTRL+Z  
to undo the move.*

■

### Copy or move a component into another document

1. With *i publish* already running in an open window, open *i publish* again.
- How?
2. In the second copy of *i publish*, open the *i publish* document that contains the component you want.
3. Point to the component, and then click the right mouse button. (Or press SHIFT+F10.)
4. On the popup menu, point to Select, and then click the component you want.  
If there is more than one component on the menu, the last component is the one that contains all the other listed components.
5. On the Edit menu, click Copy or Cut.
6. Display the *i publish* document that you want to add the component to.
7. Click a component in the second copy of *i publish*.
8. On the Edit menu, click Paste.  
*i publish* places the component based on the current layout, and the *i publish* drag and drop rules.

■

*If you don't like where the  
component landed, press CTRL+Z  
to undo the move.*

|

### More Information

#### Concept

- Drag and drop rules

■

### Delete a component

When you delete an intelligent component, you remove both the component and its contents.

**Note:** If your component is larger than one page, even though you might be looking at just one page, *i publish* will delete the component from all of the pages in your document.

1. Point to the component, and then click the right mouse button.
2. On the popup menu, point to Select, and then click the component you want.  
If there is more than one component on the menu, the last component is the one that contains all the other listed components.

*i publish* places a border around what will be deleted.

3. On the Edit menu:

- Click Delete to delete a picture component.
- Click Delete Text Component to delete a text component.

*i publish* removes all the text, the picture if there is one, and the intelligent component, too.

**Shortcut:** Press SHIFT+F10 to display the popup menu.

■

*If you deleted more than you  
expected, press CTRL+Z.*

|

### Clear a component

When you clear an intelligent component, you remove the text and pictures, but the empty component remains in your document.

**Note:** If your component is larger than one page, even though you might be looking at just one page, *i publish* will clear the component from all of the pages in your document.

1. Click the text or picture you want to remove. (You don't need to highlight the text.)
2. On the Edit menu, click Clear.  
*i publish* removes the text or picture, but leaves the intelligent component in your document.

**Note:** To clear a compound component, clear its text or pictures one at a time.

*If you cleared more than you expected, press CTRL+Z.*

### More Information

#### What if...

The whole intelligent component went away?

### Change the look of an intelligent component

You can change the color, graphic effects, font, or paragraph scheme of a component to completely change its look.

1. Click the Design tab at screen left.
2. Click the Colors, Effects, Fonts, or Paragraphs tab.
3. Click and drag the scheme you want onto the component.

**Tip:** To change just the font size of a component: click it, click the button below on the toolbar, and then click a font size.

*If you don't like the new scheme,  
press CTRL+Z to undo it or click a  
different scheme.*

### **Change the font size of a component**

1. Select the component you want to change.
2. On the toolbar, click the button below.

3. Click the font size you want.

### **Change the font scheme for an intelligent component**

1. Click the Design tab at screen left.
2. Click the Fonts tab.
3. Click and drag the scheme you want onto the component.

*If you don't like the new scheme,  
press CTRL+Z to undo it or click a  
different scheme.*

### **Change the paragraph scheme for an intelligent component**

1. Click the Design tab at screen left
2. Click the Paragraphs tab.
3. Click and drag the scheme you want onto the component.

*If you don't like the new scheme,  
press CTRL+Z to undo it or click a  
different scheme.*

### **Change the color scheme for an intelligent component**

1. Click the Design tab at screen left.
2. Click the Colors tab.
3. Click and drag the scheme you want onto the component.

*If you don't like the new scheme,  
press CTRL+Z to undo it or click a  
different scheme.*

### **Change the graphic effects scheme for an intelligent component**

1. Click the Design tab at screen left.
2. Click the Effects tab.
3. Click and drag the scheme you want onto the component.

*If you don't like the new scheme,  
press CTRL+Z to undo it or click a  
different scheme.*

### **Clear all the text in a text component, but not the component itself**

When you clear a text component, you remove the text, but leave the empty text component in your document.

1. Click the text component you want to clear. (You don't need to highlight the text.)
2. On the Edit menu, click Clear.

*To bring back the deleted text,  
press CTRL+Z before you take any  
other action.*

#### **What if...**

\_\_\_\_\_ The whole text component went away?

### **Apply your own color scheme to part of the document**

You can create a color scheme using a color you choose, and then apply it to just one component in your document, such as a Nameplate.

1. Point to the component, and then click the right mouse button.
2. On the popup menu, point to Select, and then click the component you want.
3. On the Design menu, click Schemes.
4. Click the Colors tab, and then click Custom Color Scheme 1 or Custom Color Scheme 2.
5. Click the Advanced tab.
6. Under Apply To, click what part of the document you want to use the color scheme.
7. Click Clear Overrides First to add a checkmark, and then click OK.

**Shortcut:** Press SHIFT+F10 to display the popup menu.

|

### **More Information**

#### **How do you...**

Set up your own color scheme

### **Apply your own font scheme to part of the document**

You can create a font scheme using two fonts from your system, and then apply it to just one component in your document, such as a Nameplate.

**Note:** If you want to show your document on other computers, you may need to copy those font files to the other computers. (Make sure you check your font license agreement to ensure your license allows you to copy the fonts.)

If you don't copy the font files, and the new computer does not have the font you used for the scheme, Windows will substitute a font, such as Courier.

1. Point to the component, and then click the right mouse button.
2. On the popup menu, point to Select, and then click the component you want.
3. On the Design menu, click Schemes.
4. Click the Fonts tab, and then click Custom Font Scheme 1 or Custom Font Scheme 2.
5. Click the Advanced tab.
6. Under Apply To, click what part of the document you want to use the font scheme.
7. Click Clear Overrides First to add a checkmark, and then click OK.

**Shortcut:** Press SHIFT+F10 to display the popup menu.

#### **How do you...**

Set up your own font scheme

## Create your own intelligent component

You can save a component you've created so that you can use it in other documents. For example, if you get your nameplate just the way you like it, you can save it and use it in other documents.

When you add an intelligent component that you've created, *i publish* automatically changes it to match the current document's layout. However, if you applied a scheme to just that component, that scheme remains applied to the new component in the new document.

1. Select the entire component you want to save.

How?

2. On the File menu, click Save Component.
3. In the Save In section, find the folder where you want to save the component.
4. In the File Name box, type a file name for the component (ending in .dio).
5. Click Save.

### What's next?

Add an intelligent component that you created

### **Add an intelligent component that you created**

1. On the File menu, click Import, and then click Component File.
2. Find your saved component.
3. Click OK to insert it into your document.

■ How?

### **More Information**

#### **How do you...**

- Create your own intelligent component

### **Change the look of all similar intelligent components**

You can change the font, color, graphic effects, or paragraph scheme of all similar components to completely change their look. For example, you could change all of the products in a catalog at once to a specific color scheme.

1. Point to one of the components, and then click the right mouse button.
2. On the popup menu, point to Select, and then click the component you want.
3. On the Design menu, click Schemes.
4. Click the Fonts, Colors, Effects, or Paragraphs tab, and then click the scheme you want.
5. Click the Advanced tab.
6. Under Apply To, click what part of the document you want to change.
7. Click Clear Overrides First to add a checkmark, and then click OK.

**Shortcut:** Press SHIFT+F10 to display the popup menu.

*If you don't like the new scheme,  
press CTRL+Z to undo it.*

### **Set the default folder for saved components**

1. On the Edit menu, click Options.
2. Click the File Locations tab.
3. Under Type, select Component Files.
4. Click Modify.
5. Find the folder in which you want to keep these files.
6. Click OK until you return to your document.

**What do you want to do?**

- Split files across multiple floppy disks
- Combine split files back into one file

### Split files across multiple floppy disks

If you need to put your *i publish* file (or another file) on a floppy disk, but it's too large to fit on one disk, you can split the file across multiple disks.

1. On the *i publish* File menu, click "Split File Across Multiple Disks."  
Or, if you don't have *i publish* open, click the Windows Start button, point to Programs, point to *i publish*, and then click "Split File Across Multiple Disks."
2. Click the Browse button, and then select the file you want to split up.  
**Tip:** To choose a file other than an *i publish* file (like a Microsoft Word file), click the Files Of Type box, and then click All Files (\*. \*).
3. If necessary, change the Output Drive box to your floppy disk drive letter.
4. Click Split.
5. Insert floppy disks as prompted.  
Note: For best results, use empty floppy disks.
6. When you're finished, click Close.
