// F. Ron Keller

// Requirements:
// WordPerfect 6.0+
// Commence 2.1+
// Activate the WordPerfect document window.
// This macro is typically launched by Commence.
// It performs two functions:
// (1) It sends {Esc} to the window that has focus (which is
// typically the Letter Template Dialog in Commence that launched
// this macro). {Esc} closes that dialog window.
// (2) It gives focus to WordPerfect so the user can edit
// the document.

Application (A1; "WordPerfect"; Default; "US")

MacroName := "JJACTION6.WCM"

// NLS BEGIN - This section needs translation.
NlsNotFound := MacroName + " Could not find WordPerfect."
// NLS END

//*****

MacroStatusPrompt( On!; MacroName )

// If we already have the focus, {Esc} will boomerang
// and cancel us. So disable canceling for a moment.
//Cancel( Off! )
//SendKeys Wait ( "{Esc}" )// typically hits Commence.
//Cancel( On! )

// Search for our own WordPerfect document window, and make
// it the active window. Sometimes this does not work;
// it harmlessly fails to do anything useful (perhaps this
// is because it locates the macro processor window,
// rather than the WP document window? I don't know).
// Searching for window titles in the order shown seems to
// improve the odds of getting the right effect.

hWP := AppLocate( "WordPerfect -*" ) // maximized doc window.
If ( hWP = 0 )
    hWP := AppLocate( "WordPerfect" ) // non-maximized doc.
    If ( hWP = 0 )

```

```
hWP := AppLocate( "WordPerfect*" ) // anybody home?
If ( hWP = 0 )
    MacroStatusPrompt( On!; NlsNotFound )
    Wait(30)
    Return
EndIf
EndIf
EndIf

AppActivate( hWP ) // get the focus.

Error ( Off! )      // in case we're already maximized.
AppMaximize()
Error ( On! )

// End of JJACTIV6.WCM
