The Product;

SYNCPRO

SYNC Pro is a cost effective network auditing solution. The software provides management with detailed information on both the hardware and software assets of your company's network.   SYNCPRO is an ideal tool for audit purposes and protects users by identifying illegal software and other abuses of IT assets. SYNCPRO is easily installed and administered, as it only needs to be installed once on the server. As each workstation logs onto the network, information is gathered on both the physical hardware and software in use on that particular workstation.
