

## Logical Decisions<sup>(R)</sup> For Windows<sup>TM</sup> - Demo Version

Thank you for requesting the demonstration version of Logical Decisions for Windows. We are sure that you will find that Logical Decisions is the most powerful and intuitive alternatives evaluation software available.

### About the Demo Version

The demonstration version of Logical Decisions is called **LDWDEMO.EXE**. It is a working version of the full Logical Decisions for Windows (LDW) program, with the exception that all of its output functions have been disabled. Thus you can load in files and make any changes you want, but you won't be able to save your changes. You also can't print any of LDW's graphic screens or copy them to the clipboard.

For this reason you should not attempt to do any important analysis with the demonstration version. You will not be able to save any data to a file.

The purpose of the demo version is to let you see some of LDW's unique features and to let you play with the example files. The accompanying booklet provides an overview of LDW and guides you through a series of steps that will point out many of LDW's powerful features. Don't feel that you have to go through each of the steps. Just look at the title for each step and go through the ones that seem interesting to you. You can always go back later if a later step peaks your interest in an earlier step. In addition, four example files have been included with the LDW demo version:

- **EXAMPLE.LDW** is an evaluation of computers.
- **COMPEX.LDW** is an example of a computer purchase decision.
- **HOUSEEX.LDW** is a home buying decision.
- **RESEX.LDW** is a sophisticated reservoir location analysis.

You can access the Logical Decision help system for definitions of terms and explanation of the various options. Press **F1** for the help index. The help system is very comprehensive. There you should find answers to almost any question you have about LDW. If you don't, please feel free to contact POW! Distribution pn 01202 716726.

### Installing the Demo Version

The LDW demo comes compressed on floppy disks. To run the demo, you must install it onto your hard disk. You do this from Windows by placing the disk in the proper drive and selecting the **File::Run** option from the Windows Program Manager. There you type **A:INSTALL** in the dialog box. The install program will ask you to enter a path where it should install the demo. We suggest the path C:\LDW40. You should select a new directory or one with no other files in it.

Once you have done this, the install program will automatically load the demo files to your hard disk. It will also create a new program group for the demo. You can then start the LDW demo program by double clicking its icon in the new program group. To uninstall the LDW demo, just double click on the uninstall icon and follow the simple instructions.
