

The fast way of getting Aldus Fetch items into Image Integrator is to use the Send Reference from the Aldus Fetch Item menu (System 7 only). This is accomplished by loading QuarkXPress, switching to Aldus Fetch, and then selecting the items you wish to send. After choosing the Send Reference command in the Item menu, a dialog will appear displaying a list of current applications. Selecting QuarkXPress on the current machine, and hitting OK will send the items to QuarkXPress.
